Panicum acrotrichum Hook. f. Journ. Linn. Soc. vii. 226. (1864).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online.
TYPE from The Cameroons. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Mann 2100, Cameroon (K).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): Gk. akros, at the tip; thrix, hair. Sterile lemma bearing stiff hairs.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Culms rambling, slender, $15-60 \mathrm{~cm}$ long, rooting from lower nodes. Leaf-sheaths narrower than blade at the collar. Ligule a ciliate membrane. Leaf-blade base broadly rounded. Leaf-blades spreading, lanceolate, $3-8 \mathrm{~cm}$ long, $8-23 \mathrm{~mm}$ wide. Leaf-blade venation with distinct cross veins. Leaf-blade surface pilose, sparsely hairy. Leaf-blade margins scaberulous.

Inflorescence. Inflorescence a panicle. Panicle open or contracted, oblong, 7-15 cm long. Primary panicle branches 1-2 -nate. Panicle branches capillary. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate, dorsally compressed, $2-2.5 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume lanceolate, $0.33-0.5$ length of spikelet, membranous, without keels, $1-3$-veined. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5-7 -veined. Upper glume surface pilose, hairy above, with an apical beard (up to 3 mm long). Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5-7 -veined, acute. Fertile lemma oblong, dorsally compressed, 2 mm long, chartaceous, pallid, without keel, more than 3-veined. Lemma margins involute. Lemma apex acute. Palea involute, chartaceous.

Flower and Fruit. Anthers 3, 1.3 mm long.
$2 n=32$ ( 1 ref TROPICOS).
Distribution (TDWG). Continent. Africa.
Country /Province/State. West-Central Tropical Africa. Annobon, Principe \& Sao Tome.

Panicum adenophorum K. Schum. Engl. Pflanzenw. Ost-Afr. C 103. (1895).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online.
TYPE from Tanzania. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: ST: F.L. Stuhlmann 2143, 1894, Tanzania: Seengebiet (Ruhanga) (B, US-1063855). ST: Stuhlman 2331, Tanzania: Runssori 2500 m (B).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): Gk. aden, gland; phero, bear. The leaf-blades bear gland-tipped hairs.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual or perennial, short-lived. Culms rambling, 45-240 cm long, wiry, rooting from lower nodes. Ligule a ciliate membrane. Leaf-blade base broadly rounded. Leaf-blades lanceolate, $4-11 \mathrm{~cm}$ long, $4-13 \mathrm{~mm}$ wide. Leaf-blade surface pilose. Leaf-blade margins scabrous. Leafblade apex acute.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $5-15 \mathrm{~cm}$ long. Panicle branches pilose, with clavellate hairs or simple hairs (rarely). Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, filiform, glabrous or bearing a few hairs.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong, dorsally compressed, $2.5-3(-4) \mathrm{mm}$ long, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.33-0.5$ length of spikelet, membranous, without keels, 5-7 -veined. Lower glume apex obtuse. Upper glume oblong or ovate, 1 length of spikelet, membranous, without keels, $9-11$-veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, $9-11$-veined, obtuse. Palea of lower sterile floret scabrous. Fertile lemma oblong, dorsally compressed, $2.5-3(-4) \mathrm{mm}$ long, coriaceous, pallid, without keel, more than 3veined. Lemma margins involute. Lemma apex obtuse. Palea involute, coriaceous.

Flower and Fruit. Anthers 3, 2 mm long.
Distribution (TDWG). Continent. Africa.
Country /Province /State. West-Central Tropical Africa, East Tropical Africa, South Tropical Africa. Burundi, Rwanda, DRC. Tanzania, Uganda. Angola, Malawi, Zambia.

Illustrations (Books): L.K.A. Chippindall, Grasses and Pastures of South Africa (1955) (324, Fig 281).

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual or perennial, short-lived. Culms rambling, slender, 15-70(100) cm long, rooting from lower nodes. Ligule a ciliate membrane. Leaf-blades lanceolate, parallel-sided, $3-11 \mathrm{~cm}$ long, $3-10(-12) \mathrm{mm}$ wide, membranous. Leaf-blade surface glabrous or pilose. Leaf-blade apex acute or acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $4-16(-22) \mathrm{cm}$ long. Primary panicle branches spreading. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, acuminate, $2.5-3.5 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 1 length of spikelet, membranous, dark green (olive), without keels, 5(-7) -veined. Lower glume lateral veins ribbed. Lower glume surface pubescent. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, dark green (olive), without keels, 7 -veined. Upper glume lateral veins ribbed. Upper glume surface pubescent. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, ribbed, pubescent, acute. Fertile lemma oblong, dorsally compressed, $2-3 \mathrm{~mm}$ long, indurate, pallid, shiny, without keel, more than 3 -veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province /State. West-Central Tropical Africa, Northeast Tropical Africa, East Tropical Africa, South Tropical Africa, Southern Africa, Western Indian Ocean. Rwanda. Ethiopia (inc. Eritrea). Uganda. Malawi. Limpopo, Mpumalanga, Swaziland, Kwazulu-Natal, Eastern Cape. Madagascar.

Panicum aequivaginatum Swallen. Contrib. U. S. Nat. Herb. xxix. 271 (1948).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: R.L. Froes 19950, 15 Mar 1943, Brazil: Bahia: entre Bom Gosto and Olivençao (US-1910768; IT: US-2146782). CS.

Illustrations (Books): S.A.Renvoize, The Grasses of Bahia, 1984 (158, Fig. 57).
Derivation (Clifford \& Bostock 2007): L. aequus, equal; vagina, sheath; -ata, possessing. Leaf-sheaths about equal in length.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms decumbent, $20-100 \mathrm{~cm}$ long, rooting from lower nodes. Culm-internodes $3.5-10.5 \mathrm{~cm}$ long, distally glabrous or pilose. Culm-nodes constricted, pubescent. Leaf-sheaths $3-8.5 \mathrm{~cm}$ long, striately veined, glabrous on surface or hispid, outer margin hairy. Ligule a ciliolate membrane, $0.3-0.6 \mathrm{~mm}$ long. Collar pubescent. Leaf-blade base broadly rounded or cordate. Leafblades linear or lanceolate, $3.5-12 \mathrm{~cm}$ long, $5-13 \mathrm{~mm}$ wide. Leaf-blade midrib conspicuous. Leaf-blade surface glabrous or hispid. Leaf-blade margins scaberulous, tuberculate-ciliate. Leaf-blade apex acute.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, effuse, $10-15 \mathrm{~cm}$ long, $3-7 \mathrm{~cm}$ wide. Primary panicle branches ascending. Panicle axis smooth, glabrous. Panicle branches flexuous, glabrous in axils or pubescent in axils. Spikelets solitary or in pairs. Fertile spikelets pedicelled. Pedicels present, smooth, glabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, $1.7-2.5 \mathrm{~mm}$ long, 0.7 mm wide, falling entire. Rhachilla internodes elongated between glumes.

Glumes. Glumes dissimilar, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, not clasping, $0.9-1.3 \mathrm{~mm}$ long, $0.4-0.5$ length of spikelet, membranous, without keels, 3 -veined. Lower glume lateral veins without connecting veins or transversely connected at apex. Lower glume apex acuminate. Upper glume elliptic, 0.9 length of spikelet, membranous, without keels, 9 -veined. Upper glume lateral veins without cross-veins or transversely connected at apex. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 9 -veined, acute. Palea of lower sterile floret $0.25-0.33$ length of lemma. Fertile lemma elliptic, dorsally compressed, $1.6-1.9 \mathrm{~mm}$ long, 0.6 mm wide, indurate, without keel. Lemma surface papillose. Lemma margins involute. Lemma apex apiculate. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp, ellipsoid, light brown. Embryo 0.33 length of caryopsis. Hilum punctiform.

Distribution (TDWG). Continent. South America.
Country /Province/State. Northern South America and Brazil. Brazil North.

TYPE from Sierra Leone. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Sierra Leone, Africa,.

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): in honor of Adam Afzelius (1750-1837) Swedish botanist.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual, caespitose. Culms erect or geniculately ascending, slender, $15-30 \mathrm{~cm}$ long. Leaf-sheaths glabrous on surface or hirsute. Ligule a ciliolate membrane. Leaf-blades 5-10 cm long, $2-3 \mathrm{~mm}$ wide, flaccid. Leaf-blade surface hirsute, sparsely hairy. Leaf-blade margins scaberulous.

Inflorescence. Inflorescence a panicle. Panicle open, oblong, effuse, $7-11 \mathrm{~cm}$ long. Panicle branches capillary, glabrous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, acuminate, $1.2-1.8 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma, gaping. Lower glume ovate, $0.75-0.8$ length of spikelet, membranous, without keels, $1-3$-veined. Lower glume primary vein scaberulous. Lower glume apex acuminate, awned, 1 -awned, awn $0.3-0.5 \mathrm{~mm}$ long. Upper glume oblong, 1 length of spikelet, membranous, without keels, 3-5 -veined. Upper glume apex acuminate, muticous or mucronate.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, acute or acuminate. Fertile lemma oblong, dorsally compressed, $0.5-0.8 \mathrm{~mm}$ long, indurate, pallid, shiny, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3, 0.5-0.75 mm long.
Distribution (TDWG). Continent. Africa.
Country /Province /State. West Tropical Africa. Burkina, Ghana, Guinea-Bissau, Guinea, Ivory Coast, Sierre Leone.

TYPE from Mexico. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Wiggins 15160, 23 Oct 1959, Mexico: Baja California Sur: 15.5 mi S of El Arco, 27?45'N 113?20'W (MO; IT: GH, LA, MEXU, SI).

Illustrations (Journals): Ann. Missouri Bot. Gard. (83: 225, Fig. 15 (1996) as var. alatum).
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual, caespitose. Culms erect or geniculately ascending, 13-95 cm long. Culm-internodes terete, $1.5-10 \mathrm{~cm}$ long, distally glabrous or hispid. Culm-nodes glabrous or pubescent. Lateral branches ample, arising from lower culm. Leaf-sheaths $2-7 \mathrm{~cm}$ long, glabrous on surface or hirsute, outer margin hairy. Ligule a ciliolate membrane, $0.7-1.8 \mathrm{~mm}$ long. Collar glabrous. Leaf-blades erect or ascending, linear or lanceolate, $2-18 \mathrm{~cm}$ long, $3-17 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pilose, sparsely hairy, hairy abaxially. Leaf-blade margins scaberulous. Leaf-blade apex acute.

Inflorescence. Inflorescence a panicle. Peduncle $15-30 \mathrm{~cm}$ long. Panicle open, pyramidal, effuse, 3.523 cm long, $1.5-11 \mathrm{~cm}$ wide. Panicle axis scaberulous, glabrous. Panicle branches scaberulous, glabrous. Spikelets appressed, solitary. Fertile spikelets pedicelled. Pedicels present, clavate, $1-4 \mathrm{~mm}$ long, scaberulous, glabrous or ciliate, hairy at tip.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, acuminate, $2.4-3 \mathrm{~mm}$ long, $0.7-0.9 \mathrm{~mm}$ wide, falling entire. Rhachilla internodes elongated between glumes. Rhachilla elongation 0.5 mm long.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, not clasping, $1.2-1.8 \mathrm{~mm}$ long, $0.5-0.75$ length of spikelet, membranous, without keels, 5-7 -veined. Lower glume primary vein scaberulous. Lower glume apex acuminate. Upper glume elliptic, 2.2-2.7 mm long, 1 length of spikelet, membranous, without keels, $7-9(-11)$-veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, $2.1-2.8 \mathrm{~mm}$ long, 1 length of spikelet, membranous, $7-9(-11)$-veined, acute. Fertile lemma obovate, thickened on margins at base, dorsally compressed, $1.5-1.8 \mathrm{~mm}$ long, $0.6-0.9 \mathrm{~mm}$ wide, indurate, grey, without keel, more than 3 -veined. Lemma surface papillose. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1.3 mm long. Caryopsis with adherent pericarp, ovoid, $1-1.2 \mathrm{~mm}$ long, pallid. Embryo 0.5 length of caryopsis. Hilum punctiform.

Distribution (TDWG). Continent. North America, South America.

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. albus, white; macula, spot; -atum, possessing. Culm sheaths purplish and white-spotted.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rootstock evident. Culms erect, 30-60 cm long. Leaf-sheaths glabrous on surface or hispid, outer margin hairy. Ligule a ciliolate membrane. Leaf-blade base cordate. Leaf-blades linear or lanceolate, tapering towards tip, $7-15 \mathrm{~cm}$ long, $6-10 \mathrm{~mm}$ wide. Leafblade margins scabrous, ciliate, hairy at base.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, effuse, $10-17 \mathrm{~cm}$ long. Panicle branches capillary. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, filiform, flexuous, $8-15 \mathrm{~mm}$ long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or obovate, dorsally compressed, 2.7-3.3 mm long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.8-1.3 \mathrm{~mm}$ long, $0.33-0.4$ length of spikelet, membranous, without keels. Lower glume surface pubescent. Lower glume apex obtuse. Upper glume elliptic, 1 length of spikelet, membranous, without keels. Upper glume surface pubescent. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, pubescent, obtuse. Fertile lemma elliptic, dorsally compressed, $2.7-3.3 \mathrm{~mm}$ long, indurate, pallid, shiny, without keel. Lemma margins involute. Palea involute, indurate.

Panicum aldabrense Renvoize. Kew Bull. 25(3): 421 (1971).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online.
Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From Aldabra, an island in the Indian Ocean.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Stolons present. Culms weak, $1-5 \mathrm{~cm}$ long. Leaves distichous. Leaf-sheaths glabrous on surface or pilose. Ligule a ciliolate membrane, $0.5-1 \mathrm{~mm}$ long. Leafblades flat or conduplicate or involute, $1-2 \mathrm{~cm}$ long, $1-1.5 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pilose, sparsely hairy.

Inflorescence. Inflorescence a panicle, embraced at base by subtending leaf. Panicle open, ovate, $0.5-1$ cm long, $0.3-0.5 \mathrm{~cm}$ wide, bearing few spikelets. Panicle branches pilose. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, subacute, $1-1.3 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma, gaping. Lower glume ovate, $0.5-$ 1 mm long, $0.66-1$ length of spikelet, membranous, without keels, 1 -veined. Lower glume lateral veins absent. Lower glume apex acute, muticous or mucronate. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, obtuse. Fertile lemma obovate, dorsally compressed, 1 mm long, indurate, pallid or yellow, without keel, more than 3-veined. Lemma margins convolute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers $0.5-0.6 \mathrm{~mm}$ long.
Distribution (TDWG). Continent. Africa.
Country /Province/State. Western Indian Ocean. Aldabra, Seychelles.

Derivation (Clifford \& Bostock 2007): L. unpleasant. Foliage bitter to the taste.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, culms solitary or caespitose. Rhizomes elongated. Culms erect, $30-200 \mathrm{~cm}$ long. Culm-internodes glaucous, distally glabrous. Leaf-sheaths without keel. Ligule a ciliate membrane, $2-3.5 \mathrm{~mm}$ long. Leaf-blades flat or conduplicate, $10-50 \mathrm{~cm}$ long, $3-15 \mathrm{~mm}$ wide, glaucous. Leaf-blade surface glabrous. Leaf-blade margins smooth.

Inflorescence. Inflorescence a panicle. Panicle contracted, lanceolate, $10-35 \mathrm{~cm}$ long, $3-10 \mathrm{~cm}$ wide, $0.25-0.33$ of culm length. Primary panicle branches appressed. Panicle branches glabrous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, glabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, acuminate, $4.5-6 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.5-0.66$ length of spikelet, membranous, without keels, 5-7 -veined. Lower glume apex acute. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 7 -veined. Upper glume apex acuminate.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5 -veined, acuminate. Fertile lemma oblong or ovate, dorsally compressed, $3-3.5 \mathrm{~mm}$ long, indurate, shiny, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. North America, South America.
Country /Province/State. Northeast USA, South-central USA, Southeastern USA, Mexico. New Mexico, Texas. Florida, Georgia, Louisiana, North Carolina, South Carolina, Virginia. Northeast Mexico, Gulf (Mexico), Southeast Mexico. Mesoamerica, Caribbean. Belize, Honduras. Bahamas, Bermuda, Cuba.

Tamaulipas. Veracruz. Chiapas, Tabasco.
Panicum ambongense A. Camus. Bull. Soc. Bot. France, 99: 64 (1952).

TYPE from Madagascar. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Madagascar, Manongarivo: Perrier 11208.

Illustrations: None found.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms erect or geniculately ascending, 20-35 cm long, 4-5noded. Leaf-sheaths striately veined, glabrous on surface, outer margin glabrous or hairy. Leaf-sheath oral hairs scanty or ciliate. Ligule a fringe of hairs. Leaf-blades linear, conduplicate, $15-20 \mathrm{~cm}$ long, $3-4.5 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pilose, sparsely hairy. Leaf-blade margins scaberulous. Leaf-blade apex attenuate.

Inflorescence. Inflorescence a panicle. Panicle open, oblong, 6-30 cm long. Primary panicle branches ascending, $5-10 \mathrm{~cm}$ long. Panicle axis scaberulous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, filiform, 2-5 mm long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate, dorsally compressed, $2-2.1 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma, recurved at apex and gaping. Lower glume ovate, clasping, $1.2-1.5 \mathrm{~mm}$ long, $0.66-0.75$ length of spikelet, membranous, without keels, 5 -veined. Lower glume surface asperulous. Lower glume apex acuminate. Upper glume ovate, 1 length of spikelet, membranous, without keels, keel-less except near apex, 5-7 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 6 -veined, obscurely veined, truncate. Fertile lemma elliptic, dorsally compressed, $1.2-1.5 \mathrm{~mm}$ long, indurate, pallid, shiny, without keel. Lemma margins involute. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province /State. Western Indian Ocean. Madagascar.

Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online.
Illustrations (Books): J.Bosser, Graminees des Paturage et des Cultures a Madagascar (1969) (329, Fig 122).

Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From Ambositra, Madagascar.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Culms decumbent or rambling, weak, 100-200 cm long. Lateral branches ample. Leaf-sheaths eglandular. Ligule an eciliate membrane or a ciliolate membrane. Leaf-blades conduplicate or involute, $5-13 \mathrm{~cm}$ long, $3-10 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pubescent.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, effuse, $10-25 \mathrm{~cm}$ long, with spikelets clustered towards branch tips. Primary panicle branches spreading, 1 -nate, $5-15 \mathrm{~cm}$ long. Panicle branches eglandular. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, 2-2.5 mm long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma, gaping. Lower glume ovate, 1 length of spikelet, membranous, without keels, 3 -veined. Lower glume apex acute, muticous or mucronate. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5-7 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, acute. Fertile lemma elliptic, dorsally compressed, 1.8-2.2 mm long, indurate, pallid, without keel, more than 3-veined. Lemma margins convolute. Lemma apex obtuse. Palea involute, indurate.

Illustrations (Books): S-L Chen et al, Flora of China, Illustrations, Poaceae (2007) (Fig. 685).
Derivation (Clifford \& Bostock 2007): L. beautiful. Attractive in appearance.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Culms rambling, 100-180 cm long, without nodal roots or rooting from lower nodes. Culm-nodes glabrous. Leaves cauline. Leaf-sheaths glabrous on surface, outer margin hairy. Ligule a ciliolate membrane. Leaf-blade base cordate. Leaf-blades $10-20 \mathrm{~cm}$ long, 10-12 mm wide, stiff. Leaf-blade midrib conspicuous. Leaf-blade surface glabrous. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, pyramidal, $30-40 \mathrm{~cm}$ long. Primary panicle branches whorled at lower nodes. Panicle axis angular, smooth to scaberulous. Panicle branches capillary, scaberulous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, subacute, $1.5-1.9 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes shorter than spikelet, thinner than fertile lemma. Lower glume ovate, $0.9-1.2 \mathrm{~mm}$ long, 0.66 length of spikelet, membranous, without keels, 3 -veined. Lower glume apex obtuse. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, oblong, $1.2-1.5 \mathrm{~mm}$ long, 0.8 length of spikelet, membranous, $3-5$-veined, obtuse. Fertile lemma oblong or ovate, dorsally compressed, $1.5-1.9 \mathrm{~mm}$ long, indurate, pallid, shiny, without keel. Lemma surface smooth. Lemma margins involute. Lemma apex obtuse or acute. Palea involute, $1-1.3 \mathrm{~mm}$ long, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Temperate Asia, Tropical Asia.

Country /Province /State. China. China South Central. Indian Subcontinent, Indo-China, Malesia. India. Myanmar, Thailand, Vietnam. Borneo, Malaya.

Yunnan.

Derivation (Clifford \& Bostock 2007): L. aqua, water. Habitat aquatic.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms erect, $90-130 \mathrm{~cm}$ long, rooting from lower nodes. Culm-internodes thin-walled, $7-19 \mathrm{~cm}$ long, distally glabrous. Culm-nodes brown, glabrous. Lateral branches ample, arising from upper culm. Leaf-sheaths $8-18 \mathrm{~cm}$ long. Ligule a ciliate membrane, 1.2 mm long, pilose on abaxial surface. Collar glabrous. Leaf-blades persistent or deciduous at the ligule, involute, $11-18 \mathrm{~cm}$ long, $2-4 \mathrm{~mm}$ wide. Leaf-blade surface scaberulous.

Inflorescence. Inflorescence a panicle, terminal and axillary. Peduncle $10-25 \mathrm{~cm}$ long, scaberulous above, glabrous. Panicle open, pyramidal, $35-40 \mathrm{~cm}$ long, $12-28 \mathrm{~cm}$ wide. Panicle branches scaberulous, glabrous in axils. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, clavate, glabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, 3-3.9 mm long, 1-1.2 mm wide, falling entire. Rhachilla internodes elongated between glumes.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma, gaping. Lower glume ovate, 1.72.7 mm long, $0.5-0.75$ length of spikelet, membranous, without keels, 5 -veined. Lower glume primary vein scaberulous. Lower glume apex acuminate. Upper glume ovate, 1 length of spikelet, membranous, without keels, 7 -veined. Upper glume apex acuminate.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 7 -veined, acute. Palea of lower sterile floret $1.7-2.1 \mathrm{~mm}$ long, $0.5-0.66$ length of lemma. Fertile lemma elliptic, dorsally compressed, 2.1 mm long, indurate, yellow or black, mottled with last colour, shiny, without keel, 5 -veined, more than 3-veined. Lemma margins involute. Palea involute, indurate. Palea apex papillose.

Flower and Fruit. Caryopsis with adherent pericarp, ellipsoid, 1.5 mm long. Embryo 0.33 length of caryopsis. Hilum punctiform.

Distribution (TDWG). Continent. South America.
Country /Province/State. Northern South America, Western South America, Brazil. Venezuela. Colombia. Brazil North.

Amazonas, Pará.

Derivation (Clifford \& Bostock 2007): L. aqua, water; -ica, belonging to. Growing in or close to water. Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms erect or geniculately ascending, 25-200 cm long. Culm-internodes distally glabrous. Culm-nodes glabrous. Lateral branches lacking or sparse, arising from lower culm. Leaf-sheaths glabrous on surface or pilose, with tubercle-based hairs. Ligule a ciliate membrane, $0.6-1.7 \mathrm{~mm}$ long. Leaf-blades $6-30 \mathrm{~cm}$ long, $4-8 \mathrm{~mm}$ wide. Leaf-blade surface glabrous, hairless throughout or except near base.

Inflorescence. Inflorescence a panicle, terminal and axillary. Panicle open, ovate, $4-27 \mathrm{~cm}$ long. Primary panicle branches ascending, 1 -nate, $2.5-13 \mathrm{~cm}$ long. Panicle axis scaberulous. Spikelets appressed, solitary or in pairs. Fertile spikelets pedicelled, 1-2 in the cluster. Pedicels present, unequal.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate or elliptic, dorsally compressed, acute, $2.8-3.4 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, clasping, 11.5 mm long, $0.4-0.5$ length of spikelet, membranous, without keels, 1-3 -veined. Lower glume apex obtuse or acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 7-9 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 9 -veined, acute. Palea of lower sterile floret 1 length of lemma. Fertile lemma elliptic, dorsally compressed, $2.2-2.3 \mathrm{~mm}$ long, $0.9-1 \mathrm{~mm}$ wide, indurate, shiny, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1.2-1.6 mm long. Caryopsis with adherent pericarp.
$2 n=72$ ( 1 ref TROPICOS).
Distribution (TDWG). Continent. North America and South America.
Country /Province /State. Mexico. Gulf (Mexico), Southwest Mexico, Southeast Mexico. Mesoamerica, Caribbean, Northern South America, Western South America, Brazil, and Southern South America. Belize, Costa Rica, Guatemala, Honduras, Nicaragua. Cuba, Leeward Is, Puerto Rico, Trinidad-Tobago. Bolivia, Peru. Brazil West Central, Brazil Northeast, Brazil North, Brazil Southeast, Brazil South. Illustrations (Books): L.K.A. Chippindall, Grasses and Pastures of South Africa (1955) (338, Fig 295), M.A.N.Muller, Grasses of South West Africa/Namibia (1984).

Derivation (Clifford \& Bostock 2007): L. shrub. Shrubby in habit.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rhizomes short. Culms erect, 40-80 cm long, woody. Culm-nodes swollen. Lateral branches suffrutescent. Leaf-sheaths glabrous on surface or pilose, with tubercle-based hairs. Ligule a ciliate membrane. Leaf-blades 5-10 cm long, 3-6 mm wide, glaucous. Leaf-blade surface glabrous or pilose, with tubercle-based hairs.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $4-15 \mathrm{~cm}$ long, with spikelets clustered towards branch tips. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, subacute, $2.5-3 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.33-0.5 length of spikelet, membranous, without keels, 5 -veined. Lower glume apex obtuse. Upper glume ovate, 1 length of spikelet, membranous, without keels, 7-9 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, male or barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 9 -veined, obtuse. Palea of lower sterile floret 1 length of lemma. Fertile lemma elliptic, dorsally compressed, $2.5-3 \mathrm{~mm}$ long, indurate, yellow or light brown, shiny, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Africa.
Country /Province /State. Southern Africa. Namibia, Northern Cape.

TYPE from Mascarenes. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: "Mascarenes: Assumption Island, on rocky ground, ...", Dupont 110.

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. from Assumption Island, Indian Ocean.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Stolons present. Culms decumbent, 7-12 cm long, $0.5-0.75 \mathrm{~mm}$ diam., wiry. Ligule a ciliate membrane. Leaf-blades $2-5 \mathrm{~cm}$ long, $1.5-3 \mathrm{~mm}$ wide.

Inflorescence. Synflorescence compound, fasciculate.
Inflorescence a panicle, comprising 3-8 fertile spikelets, terminal and axillary, subtended by a spatheole, enclosed. Spatheole lanceolate, $1-1.5 \mathrm{~cm}$ long. Panicle open, linear or oblong, $0.5-1 \mathrm{~cm}$ long, bearing few spikelets. Primary panicle branches indistinct the panicle almost racemose or simple. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or ovate, dorsally compressed, $1-1.3 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, clasping, 0.5 length of spikelet, membranous, without keels, 1 -veined. Lower glume lateral veins absent. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, acute. Fertile lemma elliptic, dorsally compressed, $1-1.3 \mathrm{~mm}$ long, indurate, light brown, without keel, more than 3 -veined. Lemma margins convolute. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province /State. Western Indian Ocean. Aldabra, Madagascar, Seychelles.

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Harley et al. 15229, 18 Jan 1972, Brazil: Bahia, Serra do Rio de Contas, on road to Abaira, ca. 8 km to north of the town of Rio de Contas, 1000 m (CEPEC; IT: K, MO-3663763, NY, US-2955120).

Illustrations (Books): S.A.Renvoize, The Grasses of Bahia, 1984 (168, Fig. 61).
Derivation (Clifford \& Bostock 2007): L. assurgo, rise up into the air. Scandent in habit.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Culms arching, 100-200 cm long. Culm-internodes 4-10 cm long, distally glabrous. Culm-nodes constricted, glabrous. Leaf-sheaths $3-7 \mathrm{~cm}$ long, striately veined, hispid, outer margin hairy. Ligule a ciliolate membrane, 0.3 mm long. Leaf-blades linear or lanceolate, $8-$ 12 cm long, 7-10 mm wide. Leaf-blade surface hispid, sparsely hairy. Leaf-blade margins scabrous. Leafblade apex acute.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, effuse, $12-15 \mathrm{~cm}$ long, $7-10 \mathrm{~cm}$ wide. Primary panicle branches whorled at lower nodes. Panicle branches flexuous, eglandular, glabrous, glabrous in axils. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, glabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, 3.3 mm long, 1.2 mm wide, falling entire.

Glumes. Glumes similar, shorter than spikelet, thinner than fertile lemma. Lower glume lanceolate or ovate, not clasping, $2.1-2.7 \mathrm{~mm}$ long, $0.75-0.8$ length of spikelet, membranous, without keels, 3 -veined. Lower glume lateral veins transversely connected at apex. Lower glume apex acute. Upper glume elliptic, 0.8 length of spikelet, membranous, without keels, 9 -veined. Upper glume surface glabrous to pubescent. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 9 -veined, glabrous or pubescent, acute. Palea of lower sterile floret 0.66 length of lemma. Fertile lemma elliptic, dorsally compressed, 2.7 mm long, 1 mm wide, indurate, without keel. Lemma surface papillose. Lemma margins involute. Lemma apex acute, pubescent. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp, ellipsoid, 2.1 mm long.
$n=9$ (1 ref TROPICOS).
Distribution (TDWG). Continent. South America.

Illustrations (Journals): Ann. Missouri Bot. Gard. (83: 230, Fig. 17 (1996)).
Derivation (Clifford \& Bostock 2007): L. anum, indicating connection. From Mexico, that is the land of the Aztecs.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, $50-100 \mathrm{~cm}$ long. Culm-internodes terete, $13-16 \mathrm{~cm}$ long. Culm-nodes glabrous. Leaf-sheaths $2-10 \mathrm{~cm}$ long, mostly shorter than adjacent culm internode, glabrous on surface or pilose, outer margin glabrous. Leaf-sheath oral hairs ciliate, 2-3.6 mm long. Ligule a ciliate membrane, $0.4-0.6 \mathrm{~mm}$ long. Collar glabrous or pubescent. Leaf-blades filiform or linear, involute, $14-30 \mathrm{~cm}$ long, $1-3 \mathrm{~mm}$ wide. Leaf-blade surface pilose, sparsely hairy, hairy adaxially or on both sides. Leaf-blade margins scaberulous. Leaf-blade apex acute.

Inflorescence. Inflorescence a panicle. Peduncle $25-48 \mathrm{~cm}$ long, glabrous. Panicle open, pyramidal, effuse, $15-18 \mathrm{~cm}$ long, $8-10 \mathrm{~cm}$ wide. Panicle axis glabrous. Panicle branches glabrous in axils. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, acute, $3.7-4.5 \mathrm{~mm}$ long, 1.5 mm wide, falling entire. Rhachilla internodes elongated between glumes. Rhachilla elongation 0.5 mm long.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, not clasping, $2-3 \mathrm{~mm}$ long, $0.5-0.75$ length of spikelet, membranous, without keels, 7 -veined. Lower glume primary vein scaberulous. Lower glume apex acuminate. Upper glume elliptic, 3.2-4.2 mm long, 1 length of spikelet, membranous, without keels, 7-9 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 3-4 mm long, 1 length of spikelet, membranous, 7-9 -veined, acute. Palea of lower sterile floret $1.7-2.7 \mathrm{~mm}$ long. Fertile lemma ovate, dorsally compressed, $2.4-3 \mathrm{~mm}$ long, $0.9-1.2 \mathrm{~mm}$ wide, indurate, yellow, shiny, without keel, 7 -veined, more than 3 -veined. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1.3 mm long. Caryopsis with adherent pericarp, ovoid, 1.8 mm long, pallid. Embryo 0.5 length of caryopsis. Hilum punctiform.

Distribution (TDWG). Continent. North America.

TYPE from USA, Hawaii. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: IT: F.W. Beechey s.n., 1826, Hawaii (US-80484 (fragm.)).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): in honor of Frederick William Beechey (1796-1856) English Naval Officer.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.

Habit, Vegetative Morphology. Perennial, caespitose. Culms 30-60 cm long. Culm-internodes distally glabrous or pubescent. Culm-nodes glabrous or pubescent. Lateral branches lacking. Leaves cauline. Leaf-sheaths glabrous on surface or puberulous. Ligule a ciliate membrane, $0.7-1.8 \mathrm{~mm}$ long. Leaf-blades flat or convolute, $10-18 \mathrm{~cm}$ long, $2-5 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or puberulous.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $10-18 \mathrm{~cm}$ long. Primary panicle branches spreading. Panicle axis scabrous. Panicle branches scabrous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, acuminate, 2.4-3.4 mm long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.9 length of spikelet, membranous, without keels, 5-7 -veined. Lower glume surface pilose. Lower glume hairs 1.2-2.5 mm long. Lower glume apex acuminate. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 7-9 -veined. Upper glume surface villous. Upper glume apex acuminate.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 3 -veined, glabrous, acute. Palea of lower sterile floret 0.25 length of lemma. Fertile lemma elliptic, dorsally compressed, $1.7-1.9 \mathrm{~mm}$ long, indurate, shiny, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1-1.3 mm long. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Pacific.
Country /Province /State. North-central Pacific. Hawaii.
Panicum belmonte Renvoize. Kew Bull., 37(2): 325, f. 4. (1982).
Accepted by: U.Quattrocchi, CRC World Dictionary of Grasses (2006).
TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Harley et al. 17383, 24 Mar 1974, Brazil: Bahia, Coastal Zone, 25 km SW of Belmonte, on road to Itapeb?(CEPEC; IT: K, MO-3663768, US-2955112).

Illustrations (Books): S.A.Renvoize, The Grasses of Bahia, 1984 (175, Fig. 65 as Panicum belmonte).
Derivation (Clifford \& Bostock 2007): L. from Belmonte, Bahia, Brazil.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual or perennial, short-lived. Rhizomes elongated. Culms geniculately ascending, $20-80 \mathrm{~cm}$ long, rooting from lower nodes. Lateral branches sparse, arising from lower culm. Ligule a ciliate membrane. Leaf-blade base cordate. Leaf-blades erect or ascending, linear or lanceolate, $2.5-10 \mathrm{~cm}$ long, $3-18 \mathrm{~mm}$ wide, stiff. Leaf-blade surface pilose, sparsely hairy. Leaf-blade apex acute.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, 5-12 cm long. Primary panicle branches profusely divided. Panicle branches tangled. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or oblong, dorsally compressed, $1.7-2 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.5 length of spikelet, membranous, without keels, 1 -veined. Lower glume lateral veins absent. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 7 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 7 -veined, acute. Fertile lemma elliptic, dorsally compressed, 1.72 mm long, indurate, pallid, without keel. Lemma surface scaberulous. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province/State. Brazil. Brazil Northeast.
Bahia. Bahia.

Derivation (Clifford \& Bostock 2007): in honor of Frederico Guillermo Carlos Berg (1843-1902) Russian-born Argentinian botanist.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms $30-60 \mathrm{~cm}$ long. Culm-nodes purple, bearded. Leaf-sheaths hirsute. Ligule a ciliolate membrane. Leaf-blades $10-37 \mathrm{~cm}$ long, $1-6 \mathrm{~mm}$ wide. Leaf-blade surface hirsute, hairy on both sides. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle, deciduous as a whole. Peduncle fracturing. Panicle open, pyramidal, effuse, $10-20 \mathrm{~cm}$ long, 0.33 of culm length. Primary panicle branches spreading, whorled at lower nodes, branching divaricately. Panicle branches bearded in axils. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, acute, $2.5-2.8 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes dissimilar, exceeding apex of florets, thinner than fertile lemma. Lower glume ovate, $0.33-0.5$ length of spikelet, membranous, without keels, 5 -veined. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 7 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 7 -veined, acute. Fertile lemma ovate, dorsally compressed, 1.51.8 mm long, indurate, pallid or grey, shiny, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers purple. Caryopsis with adherent pericarp, ovoid, 1.1-1.2 mm long.
Distribution (TDWG). Continent. North America, South America.

TYPE from Madagascar. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Madagascar, Ankarana: Humbert 18855.

Illustrations: None found.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Rhizomes short. Culms erect, robust, 120 cm long. Culminternodes striate, distally glabrous. Leaf-sheaths striately veined, glabrous on surface. Ligule an eciliate membrane. Leaf-blades linear, $15-17 \mathrm{~cm}$ long, 6 mm wide. Leaf-blade margins scaberulous. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, elliptic, loose, $25-30 \mathrm{~cm}$ long. Primary panicle branches ascending, 1 -nate, $7-8 \mathrm{~cm}$ long. Panicle branches scaberulous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $2-4 \mathrm{~mm}$ long, tip widened.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, laterally compressed, 3-3.5 mm long, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma, recurved at apex and gaping. Lower glume ovate, clasping, $1-1.2 \mathrm{~mm}$ long, 0.33 length of spikelet, membranous, without keels, 3 -veined. Lower glume apex obtuse. Upper glume ovate, 1 length of spikelet, membranous, without keels, $5-7$-veined. Upper glume lateral veins prominent. Upper glume surface asperulous. Upper glume apex cuspidate.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, lanceolate or ovate, 1 length of spikelet, membranous, scaberulous, cuspidate. Fertile lemma lanceolate, dorsally compressed, 2 mm long, indurate, pallid, shiny, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Derivation (Clifford \& Bostock 2007): L. bis, twice; sulcus, furrow. With two furrows as of glumes and lemmas.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Basal innovations extravaginal. Culms decumbent, 30-50 cm long, compressible or firm, 3-6 -noded, rooting from lower nodes. Culm-nodes glabrous. Lateral branches ample. Leaf-sheaths glabrous on surface, outer margin hairy. Ligule a ciliolate membrane, $0.5-0.75 \mathrm{~mm}$ long. Leaf-blades $2-15 \mathrm{~cm}$ long, $4-13 \mathrm{~mm}$ wide, light green. Leaf-blade midrib prominent beneath. Leafblade surface smooth or scaberulous. Leaf-blade apex acute or acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $10-20 \mathrm{~cm}$ long, with spikelets clustered towards branch tips. Primary panicle branches spreading, 1-2 -nate, profusely divided. Panicle branches capillary. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $0.4-3 \mathrm{~mm}$ long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate or elliptic, dorsally compressed, compressed slightly, acute, $2.4-3 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.5 length of spikelet, membranous, without keels, 3-5 -veined. Lower glume apex acute. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 3-5 -veined, smooth or scaberulous, acute. Fertile lemma elliptic, dorsally compressed, 2 mm long, indurate, pallid or light brown, without keel. Lemma surface striate. Lemma margins involute. Lemma apex obtuse or acute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp, oblong, black. Embryo 0.4 length of caryopsis.

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From Brazzaville, Congo.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths persistent and investing base of culm, with compacted dead sheaths or fibrous dead sheaths. Culms erect or geniculately ascending, slender, (20-)60-80(-85) cm long. Leaves mostly basal. Ligule a ciliate membrane. Leaf-blades parallel-sided, conduplicate or involute, $10-20(-25) \mathrm{cm}$ long, $1-3 \mathrm{~mm}$ wide, stiff. Leaf-blade surface glabrous or pilose. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, oblong or ovate, 3-15(-20) cm long. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate or orbicular, dorsally compressed, $1.2-1.7 \mathrm{~mm}$ long, falling entire, readily shedding fertile florets.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.66-0.75$ length of spikelet, membranous, without keels, 3 -veined. Lower glume surface glabrous (rarely) or pubescent. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface glabrous (rarely) or pubescent. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, glabrous (rarely) or pubescent, acute. Fertile lemma oblong, dorsally compressed, $1.2-1.7 \mathrm{~mm}$ long, chartaceous, pallid, without keel, more than 3-veined. Lemma surface tuberculate (verruculose). Lemma margins involute. Lemma apex obtuse. Palea involute, chartaceous. Palea surface tuberculate (verruculose).

Distribution (TDWG). Continent. Africa.
Country /Province/State. West Tropical Africa, West-Central Tropical Africa, East Tropical Africa, South Tropical Africa. Ghana, Guinea, Mali, Nigeria, Senegal, Togo. Congo. Tanzania, Uganda. Angola, Mozambique, Zambia, Zimbabwe.

Derivation (Clifford \& Bostock 2007): in honor of Daniel Bunce (1813-1872) Australian nurseryman and Garden's Curator.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rootstock evident. Basal innovations extravaginal. Culms slender, $30-80 \mathrm{~cm}$ long, 3-4 -noded. Culm-nodes glabrous or pubescent. Lateral branches lacking or sparse. Leaf-sheaths glabrous on surface or pilose, with tubercle-based hairs. Ligule a ciliolate membrane, 0.75 mm long. Leaf-blades flat or conduplicate or involute, $10-20 \mathrm{~cm}$ long, $1.5-5 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pilose, sparsely hairy, hairy abaxially, with tubercle-based hairs. Leafblade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, lanceolate, nodding, 7-30 cm long. Primary panicle branches ascending or spreading, 1-2 -nate, profusely divided, $5-17 \mathrm{~cm}$ long. Panicle branches capillary, glabrous in axils. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, $1-3 \mathrm{~mm}$ long, tip cupuliform.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate or ovate, dorsally compressed, acute or acuminate, $3-4.5 \mathrm{~mm}$ long, falling entire. Rhachilla internodes elongated between glumes.

Glumes. Glumes shorter than spikelet, thinner than fertile lemma. Lower glume oblate, clasping, gibbous, $0.25-0.33$ length of spikelet, membranous, without keels, 5-7 -veined. Lower glume lateral veins obscure. Lower glume apex obtuse. Upper glume ovate, 0.9 length of spikelet, membranous, without keels, 5-7 -veined. Upper glume lateral veins prominent. Upper glume apex acute or acuminate.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 7-9 -veined, prominently veined, acute. Palea of lower sterile floret 0.75 length of lemma. Fertile lemma elliptic or oblong, dorsally compressed, $1.7-2 \mathrm{~mm}$ long, indurate, pallid or light brown, shiny, without keel, 7 -veined, more than 3-veined. Lemma lateral veins obscure. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers $3,1.25 \mathrm{~mm}$ long. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Europe ( ${ }^{*}$ ), Australasia.
Region. Northern Europe (*).
Country /Province /State. : GB Aliens (Ryves et al). Australia. South Australia, Queensland, New South Wales.

Panicum caatingense (Hitchc. \& Chase) Gould. Madrono 10:94 (1949).
TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: IT: Harley et al. 16384, 6 Feb 1974, Brazil: Bahía: 41 km N of Senhor do Bonfim on the BA-130 highway to Juazeiro (MO-3663766).

Illustrations (Books): S.A.Renvoize, The Grasses of Bahia, 1984 (165, Fig. 60).
Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From the Catinga, Brazil.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms erect or geniculately ascending, $30-60 \mathrm{~cm}$ long. Ligule a ciliate membrane. Leaf-blades $10-32 \mathrm{~cm}$ long, $6-10 \mathrm{~mm}$ wide. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $10-23 \mathrm{~cm}$ long, contracted about secondary branches. Primary panicle branches spreading, moderately divided. Panicle branches capillary. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, acute, $2.2-3 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.5 length of spikelet, membranous, without keels, $3-5$-veined. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 7 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 9 -veined, acute. Fertile lemma elliptic, dorsally compressed, 2.23 mm long, indurate, pallid, shiny, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil Northeast.
Bahia, Maranhao, Piaui. Bahia.

Panicum calcicola A. Camus. Bull. Soc. Bot. France, 94: 39 (1947).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online.
TYPE from Madagascar. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Madagascar, Montagne des Francais: Perrier 16209.

Illustrations: None found.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Culms decumbent, 30-35 cm long, rooting from lower nodes. Culm-internodes striate, distally glabrous. Lateral branches ample. Leaf-sheaths striately veined, outer margin hairy. Ligule an eciliate membrane, 3 mm long. Leaf-blades lanceolate, $5-9 \mathrm{~cm}$ long, 8-23 mm wide. Leaf-blade venation with distinct cross veins. Leaf-blade surface glabrous, hairless except near base. Leaf-blade apex acute or acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, effuse. Panicle axis hirsute. Panicle branches flexuous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, flexuous, $5-15 \mathrm{~mm}$ long, ciliate.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate, dorsally compressed, 1.5 mm long, falling entire.

Glumes. Glumes dissimilar, shorter than spikelet, thinner than fertile lemma. Lower glume lanceolate, 0.8 mm long, 0.5 length of spikelet, membranous, without keels, 3 -veined. Lower glume surface puberulous. Upper glume lanceolate, $1-1.2 \mathrm{~mm}$ long, 0.75 length of spikelet, membranous, without keels, 3 -veined. Upper glume surface puberulous. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, lanceolate, 1.4 mm long, 1 length of spikelet, membranous, 5 -veined, puberulous, obtuse.

Fertile lemma lanceolate, dorsally compressed, $1.3-1.5 \mathrm{~mm}$ long, indurate, shiny, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province /State. Western Indian Ocean. Madagascar.

Panicum callosum Hochst. ex A. Rich. Tent. Fl. Abyss. ii. 374 (1844).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Ethiopia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Ethiopia, Tu, Djeladjeranne, 29 Aug. 1840, Schimper, in pl. Schimp. Abyss., sect. III 1713 (IT: K) validly described on label.

Illustrations (Books): S.Phillips, Poaceae (Gramineae) in I.Hedberg \& S.Edwards, Flora of Ethiopia and Eritrea (1995) (203, Fig 84), R.Pilger, Die Naturlichen Pflanzenfamilien 14e (1940) (24, Fig. 13).

Derivation (Clifford \& Bostock 2007): L. hard-skinned. Florets in some way thickened.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms erect or geniculately ascending, 50-100 cm long, 3 noded. Lateral branches lacking. Leaf-sheaths glabrous on surface, outer margin hairy. Ligule a ciliolate membrane, 1 mm long. Leaf-blades tapering towards sheath, $30-45 \mathrm{~cm}$ long, $6-10 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pubescent, sparsely hairy. Leaf-blade margins scabrous.

Inflorescence. Inflorescence a panicle. Panicle contracted, lanceolate, $15-40 \mathrm{~cm}$ long. Primary panicle branches profusely divided, $15-30 \mathrm{~cm}$ long. Panicle branches capillary. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, $6-8 \mathrm{~mm}$ long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong, dorsally compressed, acuminate, 6 mm long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.75 length of spikelet, membranous, without keels, 7 -veined. Lower glume apex acuminate, mucronate. Upper glume oblong, 1 length of spikelet, membranous, without keels, 9 -veined. Upper glume apex acuminate or laterally pinched.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, oblong, 1 length of spikelet, membranous, 9 -veined, acuminate. Fertile lemma elliptic, dorsally compressed, 4 mm long, indurate, dark brown, shiny, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province/State. West-Central Tropical Africa, Northeast Tropical Africa. Ethiopia (inc. Eritrea), Sudan.

Panicum calocarpum Berhaut. Mem. Soc. Bot. France, 1953-54, 11 (1954).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

Illustrations: None found.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual, caespitose. Culms erect, $50-75 \mathrm{~cm}$ long, $4-5$-noded. Ligule an eciliate membrane. Leaf-blades $3-13 \mathrm{~cm}$ long, 2-3 mm wide.

Inflorescence. Inflorescence a panicle. Panicle open, oblong, effuse, $8-12 \mathrm{~cm}$ long. Primary panicle branches $3-8 \mathrm{~cm}$ long. Panicle branches capillary. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, filiform, 4-15 mm long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong, dorsally compressed, obtuse, 2.5 mm long, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.75-0.8$ length of spikelet, membranous, without keels, 3 -veined. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, obtuse. Fertile lemma elliptic, dorsally compressed, 1.5 mm long, indurate, pallid, without keel, more than 3-veined. Lemma surface striate. Lemma margins involute. Lemma apex acute, papillose. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province /State. West Tropical Africa. Senegal.

Illustrations (Books): S.A.Renvoize, The Grasses of Bahia, 1984 (150, Fig. 53).
Derivation (Clifford \& Bostock 2007): L. of the field. Uncultivated.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.

Habit, Vegetative Morphology. Perennial. Culms erect or geniculately ascending, 30-74 cm long, without nodal roots or rooting from lower nodes. Culm-internodes $3-10 \mathrm{~cm}$ long, distally glabrous or hirsute. Culm-nodes bearded. Lateral branches ample. Leaf-sheaths $3-7 \mathrm{~cm}$ long, mostly shorter than adjacent culm internode, hirsute, with tubercle-based hairs, outer margin hairy. Ligule a ciliate membrane, $1.5-2.5 \mathrm{~mm}$ long. Collar pubescent. Leaf-blade base broadly rounded. Leaf-blades linear or lanceolate, $7-$ 25 cm long, $5-7 \mathrm{~mm}$ wide. Leaf-blade midrib evident. Leaf-blade surface hirsute, densely hairy, hairy on both sides. Leaf-blade margins scabrous, ciliate. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle, terminal and axillary. Axillary inflorescences intermingled with terminal. Panicle open, oblong, effuse, $5-15 \mathrm{~cm}$ long. Primary panicle branches spreading, branching divaricately. Panicle axis scabrous. Panicle branches stiff, scabrous, pubescent in axils. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, scabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, 2.6-2.8 mm long, 1-1.2 mm wide, falling entire. Floret callus evident, $0.2-0.5 \mathrm{~mm}$ long.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $1.8-2.2 \mathrm{~mm}$ long, $0.5-0.75$ length of spikelet, membranous, without keels, 5-9 -veined. Lower glume primary vein scabrous. Lower glume apex acuminate. Upper glume ovate, 1 length of spikelet, membranous, without keels, 7-9 -veined. Upper glume apex acuminate.

Florets. Basal sterile florets 1, barren, with palea or without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 7-9 -veined, glabrous or pubescent, acuminate. Fertile lemma elliptic, dorsally compressed, $1.8-2 \mathrm{~mm}$ long, indurate, pallid, without keel, 7 veined, more than 3 -veined. Lemma surface glabrous or pubescent. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp, 1.2-1.3 mm long.
Distribution (TDWG). Continent. South America.

Derivation (Clifford \& Bostock 2007): L. capillis, a hair; -are, pertaining to. Inflorescence with filiform branches.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual, caespitose. Culms erect or geniculately ascending, $20-80 \mathrm{~cm}$ long. Culm-nodes bearded. Leaf-sheaths hispid, with tubercle-based hairs. Ligule a ciliate membrane. Leafblades linear or lanceolate, $7-30 \mathrm{~cm}$ long, $5-14 \mathrm{~mm}$ wide. Leaf-blade apex attenuate.

Inflorescence. Inflorescence a panicle, deciduous as a whole. Panicle open, oblong or ovate, effuse, $15-50 \mathrm{~cm}$ long. Panicle branches capillary. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or oblong, dorsally compressed, acute or acuminate, $1.8-2.5 \mathrm{~mm}$ long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.33-0.5 length of spikelet, membranous, without keels, 3 -veined. Lower glume apex obtuse to acuminate. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5-7 -veined. Upper glume apex acuminate.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5-7 -veined, acute. Palea of lower sterile floret 0.5 length of lemma. Fertile lemma elliptic, dorsally compressed, 1.5 mm long, indurate, pallid or yellow, shiny, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.

Upper glume hairs $0.5-0.7 \mathrm{~mm}$ long. Upper glume apex obtuse.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, lanceolate, $1-1.2 \mathrm{~mm}$ long, 1 length of spikelet, membranous, 5 -veined. Fertile lemma lanceolate or oblong, dorsally compressed, $1-1.2 \mathrm{~mm}$ long, indurate, pallid, shiny, without keel. Lemma margins involute. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province/State. Western Indian Ocean. Madagascar.

Panicum carautae S.A. Renvoize. Kew Bull., 32(2): 422 (1978).
TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: P. Carauta 1713, 23 Jun 1974, Brazil: Guanabara: Parque Nacional da Tijuca, Pedra da Gavea (K; IT: US2757421).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): in honor of Jorge Pedro Periera Carauta (1930-) Brazilian botanist.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose, clumped densely. Rhizomes elongated. Basal innovations flabellate. Culms erect, 50 cm long. Leaf-sheaths keeled, glabrous on surface. Ligule a ciliate membrane. Leaf-blades lanceolate, flat or conduplicate, $25-40 \mathrm{~cm}$ long, $5-7 \mathrm{~mm}$ wide, glaucous. Leafblade apex pungent.

Inflorescence. Inflorescence a panicle. Panicle open, oblong or ovate, $10-15 \mathrm{~cm}$ long. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, 2 mm long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.5-0.66$ length of spikelet, membranous, without keels, 3 -veined. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, acute. Fertile lemma elliptic, dorsally compressed, 2 mm long, indurate, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country/Province/State. Brazil. Brazil Southeast.
Panicum carneovaginatum Renvoize. Kew Bull., 34(3): 555 (1980).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online.
TYPE from Zambia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Zambia: Isoka, Mbesuma, Chambeshi River, 28 Jan 1958, Vesey-FitzGerald 1405 (HT: K).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. caro, flesh; vagina, sheath; -atum, possessing. Leaf-sheath flesh-colored.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths papery, red (pink tinged). Culms $45-145 \mathrm{~cm}$ long. Leaf-sheaths keeled. Ligule a ciliate membrane. Leaf-blades parallel-sided, conduplicate, $20-55 \mathrm{~cm}$ long, $1-3 \mathrm{~mm}$ wide. Leaf-blade surface glabrous. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, oblong, $10-30 \mathrm{~cm}$ long. Primary panicle branches ascending, naked below. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, acute, 2.2-2.8 mm long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume oblate, $0.33-0.5$ length of spikelet, membranous, without keels, (1-)3 -veined. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 7 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 7 -veined, acute. Fertile lemma oblong, dorsally compressed, $2-2.5 \mathrm{~mm}$ long, indurate, dark brown or black, shiny, without keel, more than 3 -veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.

Country /Province /State. Northeast Tropical Africa, East Tropical Africa, South Tropical Africa. Sudan. Tanzania, Uganda. Malawi, Mozambique, Zambia.

Panicum caudiglume Hack. Oesterr. Bot. Zeitschr. li. 428. (1901).

TYPE from Indonesia, Java. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: H.N. Ridley s.n., (W(fragm., US-80515); IT: SING).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. caudex, tail; gluma, husk. Lower glume ovate and apex tapering.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms geniculately ascending, 30-80 cm long, 4 -noded. Ligule a ciliate membrane. Leaf-blades $7-14 \mathrm{~cm}$ long, $3-7 \mathrm{~mm}$ wide. Leaf-blade surface pilose, hairy on both sides, with tubercle-based hairs. Leaf-blade apex acute.

Inflorescence. Inflorescence a panicle. Panicle open, oblong, loose, $20-25 \mathrm{~cm}$ long. Primary panicle branches spreading, 1 -nate. Panicle branches capillary, scabrous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate, dorsally compressed, 2.5 mm long, falling entire. Rhachilla internodes elongated between glumes. Rhachilla elongation 0.5 mm long.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma, gaping. Lower glume ovate, 0.75 length of spikelet, membranous, without keels, 5 -veined. Lower glume lateral veins ribbed. Lower glume surface scabrous, rough on veins. Lower glume apex acuminate, awned, 1 -awned, awn 0.5-1 mm long. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume lateral veins ribbed. Upper glume apex acuminate.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, acuminate. Fertile lemma oblong, dorsally compressed, 1.5 mm long, indurate, pallid, shiny, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Tropical Asia.
Country /Province /State. Malesia. Java, Lesser Sunda Is, Philippines.

Panicum cayennense Lam. Illustr. i. 173. (1791).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from French Guiana. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: LT: D. Stoupy s.n., French Guiana: Cayenne (P-LA; IT: BAA (fragm. ex P), US-81397 (fragm. \& photo ex P)). LT designated (as type) by Hitchcock \& Chase, Contr. U.S. Natl. Herb. 15: 70 (1910).

Illustrations (Books): A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (257, Fig. 210), S.A.Renvoize, The Grasses of Bahia, 1984 (150, Fig. 53), L.B. Smith, D.C. Wasshausen, R.M. Klein Flora Illustrada Catarinensis Gramineas (1981-1982).

Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From Cayenne, French Guiana.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual, caespitose. Culms erect or geniculately ascending, 18-40 cm long, 1-2 mm diam. Culm-internodes distally glabrous or hispid, with tubercle-based hairs. Lateral branches ample, arising from lower culm or mid culm. Leaf-sheaths hispid, with tubercle-based hairs. Ligule a ciliate membrane, $0.8-1.2 \mathrm{~mm}$ long. Leaf-blades $9-13 \mathrm{~cm}$ long, $5-8 \mathrm{~mm}$ wide. Leaf-blade surface pilose, with tubercle-based hairs.

Inflorescence. Inflorescence a panicle, terminal and axillary. Axillary inflorescences intermingled with terminal. Panicle open, ovate, $5-16 \mathrm{~cm}$ long, $4-8 \mathrm{~cm}$ wide. Primary panicle branches branching divaricately.

Panicle branches scabrous, pubescent in axils. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, cuspidate, 2.1-2.3 mm long, falling entire. Rhachilla internodes elongated between glumes. Rhachilla elongation 0.4 mm long.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $1.3-1.6 \mathrm{~mm}$ long, $0.6-0.7$ length of spikelet, membranous, without keels, 5 -veined. Lower glume apex acute. Upper glume ovate, $1.8-2 \mathrm{~mm}$ long, 1 length of spikelet, membranous, without keels, 7 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, $1.8-2 \mathrm{~mm}$ long, 1 length of spikelet, membranous, 5 -veined, acute. Palea of lower sterile floret $0.75-0.8$ length of lemma. Fertile lemma elliptic, dorsally compressed, $1.4-1.5 \mathrm{~mm}$ long, indurate, shiny, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3, $0.7-0.9 \mathrm{~mm}$ long, purple.
Distribution (TDWG). Continent. South America.
Country /Province /State. Mesoamerica, Caribbean, Northern South America, Western South America, Brazil. Belize, Costa Rica, Guatemala, Honduras, Panama. Cuba, Dominican Republic, Haiti, Jamaica. TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: A. Chase 10737, 4 Feb 1930, Brazil: Mato Grosso: Tres Lagoas (US-1500814; IT: K, RB, US-1816795).

Recent Synonyms: Panicum vinaceum Swallen, Fieldiana, Bo. 28(1): 27 (1951)
Illustrations (Books): S.A.Renvoize, The Grasses of Bahia, 1984 (154, Fig. 55), J.A.Steyermark et al, Flora of the Venezuelan Guayana Vol. 8 (2004) (191, Fig. 133), F.O.Zuloaga et al, Flora del Paraguay 23 (1994) (223, Fig. 61).

Derivation (Clifford \& Bostock 2007): L. cervix, neck; -atum, pertaining to. Refers to the stiff-necked posture of the spikelets.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms $50-150 \mathrm{~cm}$ long. Ligule a ciliate membrane. Leaf-blades linear or lanceolate, flat or involute, 12-40 cm long, $7-18 \mathrm{~mm}$ wide, coriaceous, stiff. Leaf-blade surface ribbed, glabrous or pilose. Leaf-blade margins cartilaginous. Leaf-blade apex pungent.

Inflorescence. Inflorescence a panicle. Panicle open, oblong or ovate, effuse, 30-50 cm long. Primary panicle branches ascending or spreading. Panicle branches stiff. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, tilted on the pedicel, dorsally compressed, 79 mm long, falling entire, readily shedding fertile florets. Rhachilla internodes elongated between glumes. Floret callus elongated, $1-1.5 \mathrm{~mm}$ long, winged, with lateral wings.

Glumes. Glumes dissimilar, exceeding apex of florets, thinner than fertile lemma, gaping. Lower glume ovate, $0.5-0.66$ length of spikelet, membranous, without keels, (3-)5(-7) -veined. Lower glume apex acuminate. Upper glume ovate, 1 length of spikelet, membranous, without keels, 7-9 -veined. Upper glume apex acuminate.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 0.9 length of spikelet, membranous, 7 -veined, acute. Fertile lemma oblong, dorsally compressed,
$4.5-6 \mathrm{~mm}$ long, indurate, pallid, shiny, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. South America.
Country /Province/State. Northern South America, Brazil, Southern South America. Venezuela. Brazil West Central, Brazil Northeast, Brazil Southeast, Brazil North. Paraguay.

Illustrations (Journals): Darwiniana (22: 25, Fig.6i-k (1979)).
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rhizomes short. Culms erect, $40-70 \mathrm{~cm}$ long, $2-3 \mathrm{~mm}$ diam. Culm-internodes $3.4-10 \mathrm{~cm}$ long, distally glabrous or pubescent. Culm-nodes brown, pubescent. Leaf-sheaths $5-11.5 \mathrm{~cm}$ long, longer than adjacent culm internode, glabrous on surface or pubescent. Ligule a ciliate membrane, $1.5-2.5 \mathrm{~mm}$ long. Collar pubescent. Leaf-blades flat or involute, $15-$ 30 cm long, $1-4 \mathrm{~mm}$ wide. Leaf-blade surface pubescent, hairy on both sides. Leaf-blade margins scabrous. Leaf-blade apex attenuate.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, effuse, $10-33 \mathrm{~cm}$ long, $4-14 \mathrm{~cm}$ wide. Primary panicle branches 1 -nate. Panicle axis pubescent. Panicle branches pubescent in axils. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, clavate, $1-6 \mathrm{~mm}$ long, pubescent.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, 3.5-4.9 mm long, 1.21.7 mm wide, falling entire.

Glumes. Glumes similar, exceeding apex of florets, thinner than fertile lemma. Lower glume ovate, $2.5-4 \mathrm{~mm}$ long, $0.5-0.66$ length of spikelet, membranous, without keels, 5-7 -veined. Lower glume surface pubescent, hairy above. Lower glume apex acute. Upper glume ovate, $3.4-4 \mathrm{~mm}$ long, 1 length of spikelet, membranous, without keels, 7-9 -veined. Upper glume primary vein pubescent. Upper glume surface pubescent, hairy above. Upper glume apex acuminate.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, $3.6-4 \mathrm{~mm}$ long, 1 length of spikelet, membranous, 5-7 -veined, pubescent, hairy above, pubescent on margins, fringed below, acuminate. Palea of lower sterile floret $3-3.8 \mathrm{~mm}$ long, pubescent, adorned on flanks. Fertile lemma elliptic, dorsally compressed, $2.5-3 \mathrm{~mm}$ long, $1.2-1.6 \mathrm{~mm}$ wide, indurate, pallid, shiny, without keel, 7 -veined, more than 3-veined. Lemma margins involute, ciliate, hairy at base. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1.9-2.2 mm long. Caryopsis with adherent pericarp, oblong, 2.2-2.3 mm long. Embryo 0.5 length of caryopsis. Hilum elliptic.

Distribution (TDWG). Continent. South America.
Country /Province /State. Southern South America. Argentina Northwest.
Catamarca, Jujuy, La Rioja, Salta, Tucuman.

Panicum cinctum Hack. Oesterr. Bot. Zeitschr. 429. (1901).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online.
TYPE from Madagascar. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: IT: J.M. Hildebrandt 3997, Jan 1881, Madagascar (US-1649624, US-80519 (fragm.)).

Illustrations (Books): J.Bosser, Graminees des Paturage et des Cultures a Madagascar (1969) (325, Fig 120).

Derivation (Clifford \& Bostock 2007): pedicel with a ring of hairs immediately below the spikelet.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, 20 cm long, 2-3 -noded. Lateral branches lacking. Leaves mostly basal. Ligule a ciliate membrane. Leaf-blades $3-8 \mathrm{~cm}$ long, 3-4 mm wide, stiff. Leaf-blade surface pilose, hairy on both sides, with tubercle-based hairs. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $2-4 \mathrm{~cm}$ long. Primary panicle branches profusely divided. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, ciliate, hairy at tip.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate or ovate, dorsally compressed, $1.5-2 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.5 length of spikelet, membranous, without keels, 1 -veined. Lower glume lateral veins absent. Lower glume apex cuspidate. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex acuminate.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, acute. Fertile lemma oblong, dorsally compressed, 1.52 mm long, coriaceous, pallid, without keel. Lemma margins involute. Lemma apex acuminate. Palea involute, coriaceous.

Distribution (TDWG). Continent. Africa.
Country /Province/State. Western Indian Ocean. Madagascar.

Panicum claytonii Renvoize. Kew Bull. xxii. 484 (1968).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online.
TYPE from Zambia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: IT: N.K.B. Robson 332, 24 Oct 1958, Malawi: Northern, Nyika Plateau, Lake Kaulwe (WAG).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): in honor of William Derek Clayton (1926-) English agrostologist.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.

Habit, Vegetative Morphology. Perennial. Rhizomes short, knotty. Butt sheaths pubescent. Culms erect or geniculately ascending, (15-)40-75 cm long. Lateral branches lacking. Ligule a ciliate membrane. Leaf-blade base cordate or amplexicaul. Leaf-blades lanceolate, $4-11.5 \mathrm{~cm}$ long, $5-16 \mathrm{~mm}$ wide. Leafblade surface scabrous. Leaf-blade apex acute.

Inflorescence. Inflorescence a panicle. Panicle open, oblong, 3-10 cm long. Primary panicle branches simple, bearing spikelets almost to the base. Panicle branches pilose, with clavellate hairs. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, filiform, $3-15 \mathrm{~mm}$ long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong, dorsally compressed, obtuse, $2.5-5.5 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.33-0.5 length of spikelet, membranous, without keels, 7 -veined. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 9 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 9 -veined, acute. Palea of lower sterile floret pilose. Fertile lemma oblong, dorsally compressed, $3.5-5.5 \mathrm{~mm}$ long, indurate, pallid, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse, pubescent. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Minas Gerais: Brumadinho, Parque Estadual do Rola Moca, 6 Feb 2004, A. Guglieri, H.M.LongiWagner, P.L.virana \& F.M.Ferreira 283 (holo, ICN; iso,SI).

Illustrations (Journals): Systematic Botany (31: 507, Fig. $1 \& 508$, Fig. 2 (2006)).
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms 35-60 cm long. Culm-internodes terete, thin-walled, distally pilose. Culm-nodes pubescent. Lateral branches lacking. Leaves mostly basal. Leafsheaths retrorsely scabrous, hirsute. Ligule a ciliate membrane, $0.2-1 \mathrm{~mm}$ long. Collar pilose. Leaf-blades flat or involute, $14-24 \mathrm{~cm}$ long, 2-4 mm wide. Leaf-blade surface pubescent.

Inflorescence. Inflorescence a panicle. Peduncle 25 cm long, hirsute above. Panicle open, ovate, loose, $10-20 \mathrm{~cm}$ long, $5-12 \mathrm{~cm}$ wide. Primary panicle branches $4-5$ in number, ascending. Panicle axis scaberulous, hirsute. Panicle branches pubescent in axils. Spikelets appressed, solitary. Fertile spikelets pedicelled. Pedicels present, clavate, $3-8 \mathrm{~mm}$ long, ciliate, hairy all along but hairs longer above.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, 4.7-5.5 mm long, 11.5 mm wide, falling entire. Rhachilla internodes elongated between glumes.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 33.5 mm long, $0.5-0.6$ length of spikelet, membranous, without keels, $5-7$-veined. Lower glume apex acute. Upper glume ovate, 4.3-4.7 mm long, 1 length of spikelet, membranous, without keels, 9 -veined. Upper glume surface scabrous, rough at apex. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 9 -veined, smooth or scaberulous, rough at apex, acuminate. Palea of lower sterile floret hyaline, (1.3-)2.3-2.5 mm long. Fertile lemma elliptic, dorsally compressed, 35.1 mm long, $1-1.2 \mathrm{~mm}$ wide, indurate, pallid, without keel, more than 3 -veined. Lemma surface smooth, with basal hair tufts near margin. Lemma margins involute. Palea involute, indurate. Palea surface papillose, pilose, hairy in a transverse fringe, hairy at base.

Flower and Fruit. Lodicules 2. Anthers 3, 1.9-2 mm long. Caryopsis ellipsoid, 2 mm long. Embryo 0.5 length of caryopsis. Hilum elliptic.

Distribution (TDWG). Continent. South America.
Country /Province/State. Brazil. Brazil Southeast.
Minas Gerais.

Illustrations (Books): T.Koyama, Grasses of Japan and its neighbouring regions (1987) (301, Fig 115).

Derivation (Clifford \& Bostock 2007): L. cordus, heart; -ata, possessing. Bases of leaf-blades cordate. Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose, clumped loosely. Culms erect, 70-120 cm long, $2-3 \mathrm{~mm}$ diam., woody. Culm-internodes terete, $5-10 \mathrm{~cm}$ long, smooth, distally glabrous. Lateral branches lacking or sparse. Leaves cauline. Leaf-sheaths mostly shorter than adjacent culm internode, outer margin glabrous or hairy. Ligule a ciliate membrane, $1-2 \mathrm{~mm}$ long. Leaf-blade base broadly rounded. Leaf-blades lanceolate, $4-13 \mathrm{~cm}$ long, $10-25 \mathrm{~mm}$ wide, light green or dark green, discolorous with last colour beneath. Leaf-blade venation with distinct cross veins. Leaf-blade surface smooth or scaberulous, pubescent, hairy on both sides. Leaf-blade margins scabrous, glabrous or tuberculate-ciliate. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, elliptic, effuse, $15-30 \mathrm{~cm}$ long, $8-17 \mathrm{~cm}$ wide. Primary panicle branches ascending or spreading, 1-2 -nate. Panicle axis with lower internodes 2-6 cm long, angular, scabrous. Panicle branches capillary, scabrous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, 3-9 mm long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, obtuse, 2.2 mm long, $0.8-1 \mathrm{~mm}$ wide, falling entire, readily shedding glumes.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.66-0.9$ length of spikelet, membranous, much thinner on margins, without keels, $1-3$-veined. Lower glume lateral veins absent or obscure. Lower glume surface glabrous or pubescent. Lower glume apex acute. Upper glume elliptic, 1 length of spikelet, chartaceous, with membranous margins, without keels, 5 veined. Upper glume surface glabrous or puberulous. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, chartaceous, much thinner on margins, 5 -veined, glabrous or puberulous, acute. Fertile lemma elliptic, dorsally compressed, 1.7 mm long, coriaceous, dark green or dark brown, shiny, without keel. Lemma margins involute. Palea involute, coriaceous.

Distribution (TDWG). Continent. Temperate Asia.

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. folium, leaf. Leaf-blades only $1-1.5 \mathrm{~mm}$ long thereby resembling Cupressus leaves.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Culms $40-150 \mathrm{~cm}$ long. Lateral branches suffrutescent. Leaves with sheath almost obsolete. Ligule absent. Leaf-blades appressed (imbricate), triangular (scalelike), $0.05-0.15 \mathrm{~cm}$ long, coriaceous, stiff. Leaf-blade apex acute.

Inflorescence. Inflorescence comprising only a few spikelets, comprising 1 fertile spikelets, shorter than basal leaves. Spikelets solitary.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, $1.8-2 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes dissimilar, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, 0.8 mm long, 0.4 length of spikelet, membranous, without keels, 3 -veined. Lower glume apex obtuse. Upper glume ovate, 1.5 mm long, 0.8 length of adjacent fertile lemma, membranous, without keels, 5 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, membranous, 5 -veined, obtuse. Fertile lemma lanceolate, $1.8-2 \mathrm{~mm}$ long, coriaceous, shiny. Lemma margins involute. Lemma apex acute. Palea 1 length of lemma, coriaceous.

Distribution (TDWG). Continent. Africa.
Country /Province /State. Western Indian Ocean. Madagascar.

Panicum curviflorum Hornem. Hort. Bot. Hafn., Suppl. :116 (1819).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), S-L Chen et al, Flora of China 22 (Poaceae) (2006), J.F.Veldkamp, Poaceae ms (Flora Malesiana), N.L.Bor, Grasses of Burma, Ceylon, India and Pakistan (1960) (as P. trypheron), T.Koyama, Grasses of Japan and its neighboring regions (1987) (as P. trypheron).

TYPE from India. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: NT: Herb. Roxburgh, India: cultivated in Copenhagen in 1818, from seed obtained from Wallich as Panicum tenellum Roxb. which in turn were collected from plants cultivated in the Calcutta Bot. Gardens (BM). NT designated by Veldkamp, Blumea 34: 79 (1989).

Recent Synonyms: Panicum trypheron Schult., Mant. 2: 244. (1824).
Illustrations (Books): C-C Hsu,Taiwan Grasses (1975) (as P. trypheron var. suishaensis), K.M.Matthew, Illustrations on the Flora of Tamilnadu Carnatic (1982) (Pl. $904 \& 905$ as P. trypheron), H.J.Noltie, The Grasses of Bhutan (2000) (691, Fig. 38), S-L Chen et al, Flora of China, Illustrations, Poaceae (2007) (Fig. 714), G.G.Potgar, C.B.Salunkhe \& S.R.Yadav, Grasses of Maharashtra (2012) (Fig. 160, as P.trypheron).

Illustrations (Journals): Reinwardtia (9: 406, fig. 21 (1980 as P. deccanense)).
Derivation (Clifford \& Bostock 2007): L. curvus, bent; flos, flower. Spikelets curved.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual, caespitose. Culms erect or geniculately ascending, 30-90 cm long. Culm-nodes glabrous. Leaves mostly basal. Leaf-sheaths hispid, with tubercle-based hairs, outer margin hairy. Ligule a fringe of hairs. Leaf-blades linear or lanceolate, $7-30 \mathrm{~cm}$ long, $4-9 \mathrm{~mm}$ wide. Leafblade surface hispid, with tubercle-based hairs. Leaf-blade apex abruptly acute or acute.

Inflorescence. Inflorescence a panicle. Panicle open, oblong or ovate, effuse, 10-25 cm long. Primary panicle branches drooping, $2-20 \mathrm{~cm}$ long. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $1-15 \mathrm{~mm}$ long, scabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or oblong, dorsally compressed, acuminate, $2.8-3.5 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma, gaping. Lower glume ovate, 1.52 mm long, 0.66 length of spikelet, membranous, without keels, 5 -veined. Lower glume apex cuspidate. Upper glume lanceolate, 1 length of spikelet, membranous, without keels, 7-9-veined. Upper glume apex acuminate or cuspidate.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic or ovate, 1 length of spikelet, membranous, 7 -veined, acute. Palea of lower sterile floret 0.66 length of lemma. Fertile lemma oblong, dorsally compressed, $1.5-3 \mathrm{~mm}$ long, indurate, pallid or yellow, shiny, without keel, 7-9 -veined, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3, $0.5-1 \mathrm{~mm}$ long. Caryopsis with adherent pericarp, ovoid or orbicular, 11.25 mm long.

Distribution (TDWG). Continent. Temperate Asia, Tropical Asia.
Country /Province /State. China, Eastern Asia. China South Central. Taiwan. Indian Subcontinent, Indo-China, Malesia, Papuasia. Bangladesh, Eastern Himalaya, India, Pakistan, Sri Lanka. Laos, Myanmar, Thailand, Vietnam. Borneo, Java, Lesser Sunda Is, Malaya, Moluccas, Philippines, Sulawesi, Sumatra. New Guinea.

Yunnan. Darjeeling, Bhutan.

Images: D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002);.
Derivation (Clifford \& Bostock 2007): L. much divided. Inflorescence much branched.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose, clumped densely. Rootstock evident. Culms $30-80 \mathrm{~cm}$ long, compressible, 3-4 -noded. Culm-nodes glabrous or pubescent. Leaf-sheaths longer than adjacent culm internode, keeled, glabrous on surface or pilose, with tubercle-based hairs. Ligule a ciliolate membrane, 2 mm long. Leaf-blades flat or conduplicate or involute, $25-50 \mathrm{~cm}$ long, $3-9.5 \mathrm{~mm}$ wide, glaucous. Leaf-blade midrib conspicuous. Leaf-blade surface glabrous or pilose, with tubercle-based hairs. Leaf-blade margins scaberulous. Leaf-blade apex acute or attenuate.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $15-30 \mathrm{~cm}$ long, with spikelets clustered towards branch tips. Primary panicle branches spreading, whorled at lower nodes. Panicle branches stiff, flat (at base), scabrous. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, $1-4 \mathrm{~mm}$ long, tip cupuliform.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or ovate, dorsally compressed, compressed slightly, acuminate, $2.75-3.5 \mathrm{~mm}$ long, 1.25 mm wide, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, clasping, $0.25-0.33$ length of spikelet, membranous, without keels, $0-1$-veined. Lower glume lateral veins absent. Lower glume apex truncate or obtuse. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 7 -veined. Upper glume apex acuminate.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 7 -veined, acuminate. Palea of lower sterile floret 0.66-0.9 length of lemma. Fertile lemma elliptic or oblong, dorsally compressed, $2-2.2 \mathrm{~mm}$ long, indurate, yellow or dark brown, shiny, without keel, 7 -veined, more than 3-veined. Lemma lateral veins prominent. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp, ellipsoid or ovoid, 1.5 mm long. Embryo 0.5 length of caryopsis.

Distribution (TDWG). Continent. Europe (*), Temperate Asia, Australasia, Pacific.
Region. Northern Europe (*).

TYPE from Sudan.
Illustrations (Books): S.Phillips, Poaceae (Gramineae) in I.Hedberg \& S.Edwards, Flora of Ethiopia and Eritrea (1995) (208, Fig 86).

Derivation (Clifford \& Bostock 2007): L. delicatus, dainty; -ula, diminutive. Small and dainty as of habit.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms geniculately ascending, slender, 10-30(-50) cm long. Ligule a ciliate membrane. Leaf-blades ovate, tapering towards sheath, $3-6 \mathrm{~cm}$ long, $5-12 \mathrm{~mm}$ wide. Leafblade surface pilose, sparsely hairy. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, 3-8 cm long. Panicle branches capillary. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, acuminate, 2-2.5(-3) mm long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.25 length of spikelet, hyaline, without keels, 0 -veined. Lower glume lateral veins absent. Lower glume apex obtuse. Upper glume ovate, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume surface asperulous, glabrous or pilose, with tubercle-based hairs. Upper glume apex acuminate, mucronate.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 3 -veined, scaberulous, glabrous or pilose, with reflexed hairs, acute. Fertile lemma oblong, dorsally compressed, $1.5-2 \mathrm{~mm}$ long, indurate, pallid, shiny, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province /State. West-Central Tropical Africa, Northeast Tropical Africa, East Tropical Africa, South Tropical Africa. DRC. Ethiopia (inc. Eritrea), Sudan. Tanzania. Malawi, Zambia.

Illustrations (Journals): Ruizia (13:316, Fig 38j-1 (1993)).
Derivation (Clifford \& Bostock 2007): L. dichotoma, with divisions in pairs; flos, flower. Inflorescence an open panicle.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms geniculately ascending or decumbent, 100-200 cm long. Culm-nodes glabrous. Leaf-sheaths glabrous on surface. Ligule a ciliate membrane, 2 mm long. Leafblades $12-50 \mathrm{~cm}$ long, $3-12(-20) \mathrm{mm}$ wide. Leaf-blade midrib conspicuous. Leaf-blade surface glabrous or puberulous, hairy adaxially. Leaf-blade margins scabrous.

Inflorescence. Inflorescence a panicle, terminal and axillary, embraced at base by subtending leaf. Panicle open, ovate, $12-40 \mathrm{~cm}$ long. Primary panicle branches ascending. Panicle axis smooth or scabrous. Panicle branches stiff. Spikelets appressed, solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, $2.4-3 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.2-0.25$ length of spikelet, membranous, without keels, 5 -veined. Lower glume apex truncate or obtuse. Upper glume ovate, 1 length of spikelet, membranous, without keels, 7 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 7 -veined, acute. Fertile lemma elliptic, dorsally compressed, $2.4-3 \mathrm{~mm}$ long, indurate, shiny, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.

TYPE from Jamaica. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: O.P. Swartz s.n., no date, Jamaica (S; IT: G, M, US-76920 (fragm. ex S, ex M \& photo)).

Illustrations (Books): M.E.Barkworth et al, Flora of North America north of Mexico Vol 25 Poaceae, part 2 (2003) (465), A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (257, Fig. 211).

Derivation (Clifford \& Bostock 2007): L. widely spreading. Inflorescence an open panicle.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms geniculately ascending or decumbent, slender, $20-100 \mathrm{~cm}$ long, wiry. Culm-nodes pubescent. Lateral branches ample. Leaf-sheaths glabrous on surface or hirsute, with tubercle-based hairs, outer margin hairy. Ligule a fringe of hairs, 1.5-3 mm long. Leaf-blades 5-20 cm long, 1-4.5 mm wide, mid-green. Leaf-blade surface glabrous or pilose, hairy on both sides.

Inflorescence. Inflorescence a panicle, terminal and axillary. Axillary inflorescences compact or enclosed. Panicle open, pyramidal, $5-25 \mathrm{~cm}$ long, with spikelets clustered towards branch tips. Primary panicle branches ascending or spreading. Panicle branches scabrous, glabrous in axils. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, acute, 2.1-2.7 mm long, 1 mm wide, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.5 length of spikelet, membranous, without keels, 3 -veined. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, acute. Fertile lemma elliptic, dorsally compressed, $1.5-2 \mathrm{~mm}$ long, indurate, shiny, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. North America, South America.
Country /Province /State. South-central USA. Texas. Caribbean. Bahamas, Cuba, Dominican Republic, Haiti, Jamaica, Leeward Is, Windward Islands, Puerto Rico.

Panicum dolichoadenotrichum A. Camus. Bull. Soc. Bot. France, 108: 161 (1961).

TYPE from Madagascar. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Madagascar, Diego Suarez: Humbert 49.

Illustrations: None found.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms erect or geniculately ascending, 100 cm long, 5-6 noded. Culm-internodes glandular, distally pilose. Leaf-sheaths mostly shorter than adjacent culm internode, striately veined, pilose, with tubercle-based hairs, outer margin hairy. Leaf-sheath oral hairs bearded. Ligule an eciliate membrane, truncate. Leaf-blades linear or lanceolate, 25-30 cm long, $8-10 \mathrm{~mm}$ wide. Leaf-blade venation prominent, with $8-10$ secondary veins. Leaf-blade apex attenuate.

Inflorescence. Inflorescence a panicle. Panicle open, pyramidal, loose, $22-25 \mathrm{~cm}$ long, $13-15 \mathrm{~cm}$ wide. Primary panicle branches ascending, $10-12 \mathrm{~cm}$ long. Panicle axis with lower internodes $3-4 \mathrm{~cm}$ long, pilose, capitate hairs. Panicle branches pilose, with tubercle-based hairs. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, glandular.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, 3 mm long, falling entire.

Glumes. Glumes similar, shorter than spikelet, thinner than fertile lemma, gaping. Lower glume ovate, clasping, $1.4-1.5 \mathrm{~mm}$ long, 0.5 length of spikelet, membranous, without keels, 3( -5 ) -veined. Lower glume apex acute. Upper glume ovate, 2 mm long, 0.66 length of spikelet, membranous, without keels, 709 veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous. Fertile lemma oblong, dorsally compressed, 3 mm long, indurate, pallid, without keel. Lemma margins involute. Lemma apex mucronate. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province/State. Western Indian Ocean. Madagascar.

TYPE from Ethiopia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Ethiopia: Gamo Gofa Prov.: Gughe Highlands, 4 km below Dorse on road to Arba Minch, 2150 m , abundant on loose scree, Gilbert \& Phillips 9262 (HT: K; IT: ETH, UPS).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. -ensis, denoting origin. From Dorse, Gamo Gofar Province, Ethiopia.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual, mat forming, clumped loosely. Culms decumbent, slender, $10-35 \mathrm{~cm}$ long, rooting from lower nodes. Lateral branches ample. Ligule a ciliate membrane. Leaf-blade
base cordate. Leaf-blades lanceolate, $0.8-2 \mathrm{~cm}$ long, $3-4 \mathrm{~mm}$ wide, firm. Leaf-blade surface pubescent. Leaf-blade margins ciliate. Leaf-blade apex acute.

Inflorescence. Inflorescence a panicle. Panicle open, elliptic, 3-5 cm long, bearing many spikelets. Primary panicle branches ascending. Panicle branches capillary. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, acute, $1.8-2 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume lanceolate, $0.5-0.66$ length of spikelet, membranous, without keels, 3 -veined. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 7 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5-7 -veined, acute. Fertile lemma oblong, dorsally compressed, $1.8-2 \mathrm{~mm}$ long, indurate, pallid or grey, shiny, without keel, more than 3-veined. Lemma surface smooth. Lemma margins involute. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province /State. Northeast Tropical Africa. Ethiopia (inc. Eritrea).

Images: F.van Oudtshoorn, Guide to Grasses of Southern Africa (1999).
Derivation (Clifford \& Bostock 2007): in honor of Christian Frederick Ecklon (1795-1868) Germanborn South African apothecary and plant collector.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths pubescent, persistent and investing base of culm, with compacted dead sheaths or fibrous dead sheaths. Culms slender, $15-80 \mathrm{~cm}$ long. Leaves mostly basal. Leaf-sheaths wider than blade at the collar. Ligule a ciliolate membrane. Leaf-blades linear or lanceolate, (6-)10-20(-26) cm long, 3-8 mm wide. Leaf-blade surface pilose, sparsely hairy or moderately hairy or densely hairy, with capitate hairs or tubercle-based hairs. Leaf-blade apex acute or acuminate or attenuate.

Inflorescence. Inflorescence a panicle. Panicle open, oblong or ovate, 6-12(-18) cm long. Primary panicle branches ascending or spreading. Panicle branches capillary, glabrous or pilose, with clavellate hairs. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong, dorsally compressed, $1.5-3.5 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume oblong, $0.25-0.5$ length of spikelet, membranous, without keels, 3 -veined. Lower glume apex lobed, 3 -fid. Upper glume oblong, 0.66 length of spikelet, membranous, purple, without keels, 5 -veined. Upper glume apex lobed, 3-5 -fid.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, oblong, 1 length of spikelet, membranous, 7 -veined, pilose, hairy above (tip), lobed, (3-)5 -fid. Fertile lemma oblong, dorsally compressed, coriaceous, pallid or red (pink), without keel, more than 3veined. Lemma margins involute. Lemma apex obtuse. Palea involute, coriaceous.

Distribution (TDWG). Continent. Africa.

Derivation (Clifford \& Bostock 2007): L. spread out. Inflorescence an open panicle.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rootstock evident. Butt sheaths villous. Basal innovations extravaginal. Culms erect or geniculately ascending, $15-100 \mathrm{~cm}$ long, $2-3$-noded. Culminternodes smooth or scaberulous. Culm-nodes glabrous or pubescent. Lateral branches lacking or sparse. Leaves mostly basal. Leaf-sheaths pilose, with tubercle-based hairs. Ligule a ciliate membrane, 1 mm long. Leaf-blades flat or involute, $5-25 \mathrm{~cm}$ long, $2-5.5 \mathrm{~mm}$ wide. Leaf-blade midrib prominent beneath. Leafblade surface ribbed, scabrous, pilose, sparsely hairy or moderately hairy, hairy on both sides, with tubercle-based hairs. Leaf-blade apex attenuate.

Inflorescence. Inflorescence a panicle, deciduous as a whole, embraced at base by subtending leaf. Panicle open, oblong, effuse, $8-50 \mathrm{~cm}$ long, with spikelets clustered towards branch tips. Primary panicle branches spreading, 1-4 -nate, profusely divided, branching divaricately, $10-20 \mathrm{~cm}$ long. Panicle branches stiff, scabrous, glabrous, glabrous in axils or pubescent in axils. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, $2-10 \mathrm{~mm}$ long, tip discoid.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate or ovate, dorsally compressed, acute or acuminate, $2.25-2.75 \mathrm{~mm}$ long, falling entire, deciduous with accessory branch structures, readily shedding fertile florets.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.5(-0.66)$ length of spikelet, membranous, without keels, 3-5 -veined. Lower glume apex acute or acuminate. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 0.9 length of spikelet, membranous, 7 -veined, acuminate. Palea of lower sterile floret 0.5 length of lemma. Fertile lemma elliptic or orbicular, dorsally compressed, $1.5-1.75 \mathrm{~mm}$ long, indurate, light brown, dull or shiny, without keel. Lemma surface smooth or papillose. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Europe (*), Tropical Asia, Australasia.
Region. Northern Europe (*).

TYPE from Tanzania. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: IT: E. Eick 113, no date, Kenya / Tanzania (US-80638 (fragm.)).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): in honor of Emil Eick (fl. 1898-99) who collected in Usumbara, Tanzania.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rhizomes elongated. Culms erect, slender, 530 cm long. Leaf-sheaths striately veined, outer margin glabrous or hairy. Ligule a ciliate membrane. Leafblades appressed, tapering towards sheath or parallel-sided, $1-2(-7) \mathrm{cm}$ long, $1-2(-4) \mathrm{mm}$ wide. Leaf-blade surface glabrous or pilose. Leaf-blade apex abruptly acute.

Inflorescence. Inflorescence a panicle. Panicle contracted, oblong, 1-2(-4) cm long. Panicle branches glabrous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the
lower floret male or barren, the upper fertile. Spikelets oblong or ovate, dorsally compressed, obtuse, 2-3 mm long, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume orbicular, $0.75-1$ length of spikelet, membranous, without keels, (3-)5(-7) -veined. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 7 -veined. Upper glume apex acute or acuminate.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5-7 -veined, acute. Fertile lemma oblong, dorsally compressed, $1.5-2 \mathrm{~mm}$ long, indurate, pallid, shiny, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province /State. West-Central Tropical Africa, East Tropical Africa, South Tropical Africa. Rwanda, DRC. Kenya, Tanzania, Uganda. Malawi, Zimbabwe.

## Panicum elegantissimum Hook. f. Fl. Brit. Ind. vii. 52. (1896).

Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, S-L Chen et al, Flora of China 22 (Poaceae) (2006), N.L.Bor, Grasses of Burma, Ceylon, India and Pakistan (1960).

TYPE from Malaysia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Malay Peninsula: Perak, Ridley 3116 (HT: K; IT: CAL, SING).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. elegans, elegant; -issima, most. Very attractive in some respect, usually the inflorescence.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, $60-120 \mathrm{~cm}$ long. Leaf-sheaths 614 cm long, pilose. Ligule a fringe of hairs, 2.5 mm long. Leaf-blades $20-45 \mathrm{~cm}$ long, $3-6 \mathrm{~mm}$ wide. Leafblade midrib conspicuous. Leaf-blade surface pilose, hairy on both sides.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $30-45 \mathrm{~cm}$ long, 15 cm wide. Primary panicle branches spreading. Panicle branches with prominent pulvini. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, 3.2 mm long, falling entire.

Glumes. Glumes lateral (to upper lemma), reaching apex of florets, thinner than fertile lemma, gaping. Lower glume ovate, clasping, 0.33-0.45 length of spikelet, membranous, without keels, 5 -veined. Lower glume apex acute, mucronate. Upper glume ovate, 1 length of spikelet, membranous, without keels, 7 veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 2.6 mm long, 0.8 length of spikelet, membranous, 9 -veined, acute. Palea of lower sterile floret 1 length of lemma. Fertile lemma elliptic, dorsally compressed, 2.2 mm long, indurate, pallid, without keel, 5 -veined, more than 3-veined. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1.5 mm long. Caryopsis with adherent pericarp, pallid (white).
Distribution (TDWG). Continent. Temperate Asia, Tropical Asia.
Country /Province /State. China, Eastern Asia. China Southeast, Tibet. Taiwan. Indo-China, Malesia. Laos, Myanmar, Thailand, Vietnam. Borneo, Malaya, Philippines.

Guangdong, Guangxi. West Bengal.

Panicum elephantipes Nees ex Trin. Gram. Pan. :206 (1826).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

Illustrations (Journals): Ruizia (13:316, Fig 38m-n (1993)).
Derivation (Clifford \& Bostock 2007): L. elephantus, elephant; pes, foot. Culms thick and fleshy with black nodes reminiscent of an elephant's foot.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Culms $80-160 \mathrm{~cm}$ long, 10 mm diam., rooting from lower nodes. Culm-nodes constricted, purple, glabrous. Leaf-sheaths glabrous on surface. Leaf-sheath oral hairs ciliate. Ligule a fringe of hairs, $2-3 \mathrm{~mm}$ long. Leaf-blade base broadly rounded. Leaf-blades $30-54 \mathrm{~cm}$ long, $11-20 \mathrm{~mm}$ wide. Leaf-blade surface glabrous.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, dense, $15-30 \mathrm{~cm}$ long. Primary panicle branches ascending. Panicle branches scabrous. Spikelets appressed, in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, acuminate, $3.8-4.2 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $1-1.2 \mathrm{~mm}$ long, 0.25 length of spikelet, hyaline, without keels, 3 -veined. Lower glume lateral veins obscure. Lower glume apex acute. Upper glume ovate, 3.8-4.7 mm long, 1 length of spikelet, membranous, without keels, 5-7 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, $3.8-4.7 \mathrm{~mm}$ long, 1 length of spikelet, membranous, 5-7 -veined, acute. Fertile lemma ovate, dorsally compressed, 3.5 mm long, coriaceous, shiny, without keel. Lemma margins involute. Lemma apex acuminate. Palea involute, coriaceous.

Flower and Fruit. Anthers 3, 1.6-1.8 mm long, orange.
$2 n=30$ ( 1 ref TROPICOS).

Panicum ephemeroides F.O. Zuloaga \& O. Morrone. Ann. Missouri Bot. Gard., 83(2): 239 (1996).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. Basionym or Replaced Name: Panicum ephemerum Zuloaga, Morrone \& Valls, Iheringia, Bot. 42: 4, f. 1-8, 18-20, 24-25 (1992)
. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Brasil: Goias: Jatai ( 51 km a oeste do Rio Claro e 9 km a este do accesso a Perolandia ao longo da rodovia BR-364, 860 m ), 3 Apr 1986, Valls \& Wemeck 9867 (HT: CEN; IT: SI, US).

Illustrations (Journals): Ann. Missouri Bot. Gard. (83: 240, Fig. 19 (1996)).
Derivation (Clifford \& Bostock 2007): L. -oides, resembling. Similar to Panicum ephemerum..

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms erect, 60-70 cm long. Culm-internodes distally glabrous. Culm-nodes glabrous. Leaf-sheaths striately veined and reticulately veined, glabrous on surface. Ligule a ciliate membrane, $2-2.5 \mathrm{~mm}$ long. Leaf-blades involute, $20-23 \mathrm{~cm}$ long, 2 mm wide. Leaf-blade surface glabrous. Leaf-blade margins scaberulous. Leaf-blade apex attenuate.

Inflorescence. Inflorescence a panicle, terminal and axillary. Axillary inflorescences similar to terminal. Peduncle 16-25 cm long, glabrous. Panicle open, elliptic, effuse, 30 cm long, contracted about secondary branches. Primary panicle branches ascending. Panicle axis angular, smooth or scaberulous. Panicle branches scabrous. Spikelets appressed, solitary. Fertile spikelets pedicelled. Pedicels present, clavate, scabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, $3.5-3.6 \mathrm{~mm}$ long, $1-3$ mm wide, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma, gaping. Lower glume ovate, 2.8 mm long, 0.75 length of spikelet, membranous, without keels, $3(-5)$-veined. Lower glume primary vein scaberulous. Lower glume apex setaceously acuminate. Upper glume ovate, $3.5-3.6 \mathrm{~mm}$ long, 1 length of spikelet, membranous, without keels, $5(-7)$-veined. Upper glume primary vein scabrous. Upper glume apex acuminate.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, $3.5-3.6 \mathrm{~mm}$ long, 1 length of spikelet, membranous, 5 -veined, acuminate. Palea of lower sterile floret 2 mm long, 0.5 length of lemma. Fertile lemma elliptic, dorsally compressed, 2.1 mm long, 1.1 mm wide, indurate, dark brown, shiny, without keel, 5 -veined, more than 3-veined. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp, ellipsoid, 2.4 mm long, pallid. Embryo 0.33 length of caryopsis. Hilum elliptic.

Distribution (TDWG). Continent. South America.
Country /Province/State. Brazil. Brazil West Central.
Goiás.

Panicum ephemerum S.A. Renvoize. Kew Bull., 34(3): 551 (1979).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Zambia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Zambia: Mwinilunga, 0.5 mi S of Matonchi Farm, in 6 ft of water on shallow soil over laterite, 2 Jan 1938, MilneRedhead 3926 (HT: K).

Illustrations (Journals): Iheringia (42: 9, Fig.1-8 (1992)).
Derivation (Clifford \& Bostock 2007): Gk ephemeros, short lived. Completing life-cycle in a few weeks.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms erect, slender, $25-35 \mathrm{~cm}$ long. Lateral branches lacking. Ligule a ciliate membrane. Leaf-blades filiform, involute, $9-16 \mathrm{~cm}$ long, $1-2 \mathrm{~mm}$ wide. Leaf-blade apex abruptly acute.

Inflorescence. Inflorescence a panicle, comprising 2-12 fertile spikelets. Panicle open, oblong, 1.5-8 cm long, bearing few spikelets. Primary panicle branches appressed or ascending. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong, dorsally compressed, 3-3.5 mm long, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.5 length of spikelet, membranous, without keels, 3 -veined. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 7 -veined. Upper glume apex acuminate.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 7 -veined, acute. Fertile lemma oblong, dorsally
compressed, $2.5-3 \mathrm{~mm}$ long, indurate, pallid, shiny, without keel, more than 3-veined. Lemma margins involute. Lemma apex apiculate. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province/State. South Tropical Africa. Zambia.
Panicum exiguum Mez. Engl. Jahrb. 56 Beibl. 125, 3 (1921).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: C.W.H. Mosén 4571, Mar 1876, Brazil: Minas Gerais: Serra de Caldas (B; IT: BAA-3885 (fragm. ex B), US-80623 (fragm. ex B)).

Illustrations (Books): F.O.Zuloaga et al, Flora del Paraguay 23 (1994) (234, Fig. 65).
Illustrations (Journals): Ann. Missouri Bot. Gard. (83: 241, Fig. 20 (1996)).
Derivation (Clifford \& Bostock 2007): L. wanting in size and number. Spikelets or inflorescence branches few.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual, caespitose. Culms decumbent, 10-30 cm long. Culminternodes $1.5-7 \mathrm{~cm}$ long, distally glabrous or hirsute. Culm-nodes pallid or brown, pubescent. Lateral branches ample. Leaf-sheaths $1-4 \mathrm{~cm}$ long, mostly shorter than adjacent culm internode, hirsute, with tubercle-based hairs, outer margin hairy. Ligule a ciliate membrane, $0.5-1.5 \mathrm{~mm}$ long. Collar pubescent. Leaf-blades lanceolate, $2-6 \mathrm{~cm}$ long, $2-4 \mathrm{~mm}$ wide. Leaf-blade surface pilose, with simple hairs or tubercle-based hairs. Leaf-blade margins cartilaginous, scabrous, ciliate. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Peduncle hirsute above. Panicle open, pyramidal, effuse, 2.5-8 cm long, $2-6 \mathrm{~cm}$ wide. Panicle axis glabrous or pilose. Panicle branches glabrous or pilose, bearded in axils. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $2-10 \mathrm{~mm}$ long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, acuminate, $2.6-3 \mathrm{~mm}$ long, $0.8-1 \mathrm{~mm}$ wide, falling entire, readily shedding fertile florets or readily shedding glumes (upper glume).

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $1.7-2.2 \mathrm{~mm}$ long, $0.75-0.8$ length of spikelet, membranous, without keels, 5 -veined. Lower glume primary vein scabrous. Lower glume apex acuminate. Upper glume ovate, 1 length of spikelet, membranous, without keels, 7 -veined. Upper glume primary vein scabrous. Upper glume apex acute or acuminate.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 7 -veined, acute. Palea of lower sterile floret $1.2-1.7 \mathrm{~mm}$ long. Fertile lemma elliptic, dorsally compressed, $1.4-2 \mathrm{~mm}$ long, indurate, black, without keel, 5-7 -veined, more than 3 -veined. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp, $1.1-1.4 \mathrm{~mm}$ long. Embryo 0.5 length of caryopsis. Hilum punctiform.

Distribution (TDWG). Continent. South America.
Country /Province/State. Western South America, Brazil, Southern South America. Bolivia, Peru. Brazil West Central, Brazil Northeast, Brazil North, Brazil Southeast. Paraguay.

Goias, Maranhao, Piaui, Minas Gerais, Rio de Janeiro, Espirito Santo. Mato Grosso, Goiás, Mato Grosso do Sul. Ceará, Maranhão, Pernambuco, Paraíba, Piaui, Rio Grande do Norte (RN). Pará, Tocantins. Minas Gerais, Sao Paulo.

TYPE from USA, Hawaii. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: A. Faurie 1318, Jun 1909, USA: Hawaii: [Molokai], Halawa (US-950341; IT: BM, US-950367).

Illustrations (Books): W.L.Wagner et al., Manual of the Flowering Plants of Hawai'i, Vol. 2 (1990) (1564, Pl. 232).

Derivation (Clifford \& Bostock 2007): in honor of Urbain Jean Faurie (1847-1914) French cleric and amateur botanist.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual, caespitose. Culms 2-30(-46) cm long. Culm-internodes distally pubescent. Culm-nodes pubescent. Lateral branches sparse. Leaves cauline. Leaf-sheaths puberulous. Leaf-sheath oral hairs ciliate, $1-2.5 \mathrm{~mm}$ long. Ligule a ciliate membrane, $0.4-1.6 \mathrm{~mm}$ long. Leaf-blades flat or involute, $1.5-12 \mathrm{~cm}$ long, $1-4 \mathrm{~mm}$ wide. Leaf-blade surface pilose, hairy adaxially (puberulous below).

Inflorescence. Inflorescence a panicle. Panicle open, linear, $1-11 \mathrm{~cm}$ long. Primary panicle branches appressed. Panicle axis with scattered hairs or puberulous. Panicle branches puberulous or pilose. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, acute or acuminate, $1.5-4.2 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 1 length of spikelet, membranous, without keels, 3-5 -veined. Lower glume surface glabrous or pubescent, without hair tufts or with an apical beard. Lower glume hairs $0.6-3.5 \mathrm{~mm}$ long. Lower glume apex acute or acuminate. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 5-9 -veined. Upper glume surface glabrous or pubescent, without hair tufts or with an apical beard. Upper glume hairs 0.6-3.5 mm long. Upper glume apex acute or acuminate.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 7 -veined, glabrous or pubescent, hairy above, acute. Palea of lower sterile floret $0.15-0.2$ length of lemma. Fertile lemma elliptic, dorsally compressed, $1.2-1.8 \mathrm{~mm}$ long, indurate, dark brown, shiny, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers 3, $0.8-1.1 \mathrm{~mm}$ long. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Pacific.
Country /Province/State. North-central Pacific. Hawaii.

## Panicum fischeri Bor. Kew Bull. 1956, 257 (1956).

Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, N.L.Bor, Grasses of Burma, Ceylon, India and Pakistan (1960).

TYPE from India. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: J.S. Gamble 21388, Oct. 1889, Ind. Or.: Madras State, Nilgiris, Kullar, 750 m (K; IT: US-80617 (fragm.)).

Illustrations (Books): K.M.Matthew, Flora Palni Hills (1996) (851, Pl 851).
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Culms 50-100 cm long. Ligule a fringe of hairs. Leafblades $15-30 \mathrm{~cm}$ long, $4-8 \mathrm{~mm}$ wide. Leaf-blade apex attenuate.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $15-30 \mathrm{~cm}$ long, $10-25 \mathrm{~cm}$ wide. Primary panicle branches whorled at most nodes, $8-15 \mathrm{~cm}$ long. Panicle branches scaberulous, glabrous in axils, with insignificant pulvini. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, scaberulous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, with a barren rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, compressed slightly, 5 mm long, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 2.53 mm long, $0.5-0.66$ length of spikelet, membranous, without keels, 5 -veined. Lower glume apex acute. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 9 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 9 -veined, acute. Fertile lemma elliptic, dorsally compressed, 3.5 mm long, coriaceous, yellow, shiny, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, coriaceous. Rhachilla extension 3.5 mm long.

Distribution (TDWG). Continent. Tropical Asia. Country /Province /State. Indian Subcontinent. India.
Tamilnadu.

Panicum flacciflorum Stapf. Prain, Fl. Trop. Afr. 9: 654 (1920).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online.
TYPE from Tanzania. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: J.A. Grant s.n., no date, Tanzania (K(fragm., US-1445207)).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. flaccidus, unable to support its own weight; flos, flower. Panicle long exserted, branches pendulous.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms $10-60(-90) \mathrm{cm}$ long. Ligule a ciliolate membrane. Leaf-blade base cordate. Leaf-blades lanceolate, $3.5-10.5 \mathrm{~cm}$ long, $4-11 \mathrm{~mm}$ wide. Leaf-blade surface pilose, with simple hairs or clavellate hairs. Leaf-blade apex abruptly acute.

Inflorescence. Inflorescence a panicle. Panicle open, oblong, 3-9(-18) cm long. Panicle branches capillary, pilose, with clavellate hairs. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, filiform.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong, dorsally compressed, $3-4 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.33-0.5$ length of spikelet, membranous, without keels, 9 -veined. Lower glume lateral veins with crossveins. Lower glume apex truncate or obtuse. Upper glume ovate, 1 length of spikelet, membranous, yellow, without keels, 9 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, oblong, 1 length of spikelet, membranous, 9 -veined, acute. Palea of lower sterile floret pilose. Fertile lemma oblong, dorsally compressed, 3.5 mm long, chartaceous, pallid, without keel, 9 -veined, more than 3-veined. Lemma margins involute. Lemma apex acute, pubescent. Palea involute, chartaceous.

Flower and Fruit. Anthers 3, 1 mm long.
Distribution (TDWG). Continent. Africa.
Country /Province /State. West-Central Tropical Africa, East Tropical Africa, South Tropical Africa. Burundi, DRC. Tanzania, Uganda. Zambia.

TYPE from Madagascar. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Madagascar, Mt Taratanana: Perrier 16163.

Illustrations: None found.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms erect or geniculately ascending, slender, $25-35 \mathrm{~cm}$ long. Culm-internodes smooth, distally glabrous. Leaf-sheaths striately veined, outer margin hairy. Ligule a ciliolate membrane. Leaf-blades lanceolate, $1.4-2 \mathrm{~cm}$ long, $3-5 \mathrm{~mm}$ wide. Leaf-blade surface pilose, hairy abaxially. Leaf-blade apex acute.

Inflorescence. Inflorescence a panicle. Panicle open, lanceolate, $5-7 \mathrm{~cm}$ long. Primary panicle branches spreading. Panicle branches capillary, pilose. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong, dorsally compressed, 1.5 mm long, falling entire.

Glumes. Glumes dissimilar, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, 0.10.2 length of spikelet, membranous, without keels. Upper glume ovate, 1.4 mm long, 0.9 length of spikelet, membranous, without keels, 3 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, lanceolate or ovate, 1.5 mm long, 1 length of spikelet, membranous, 3 -veined, acute. Fertile lemma lanceolate or oblong, dorsally compressed, 1.5 mm long, indurate, shiny, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province/State. Western Indian Ocean. Madagascar.

Panicum flexile (Gatt.) Scribn. Bull. Torrey Bot. Club, xx. 475 (1893).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from USA. Basionym or Replaced Name: Panicum capillare var. flexile Gatt., Tennessee Fl. 94. (1887)
. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: LT: A. Gattinger s.n., Sep 1889, USA: Tennessee: Knox Co.: near Nashville (TENN; ILT: US-742113). LT designated by Hitchcock \& Chase, Contr. U.S. Natl. Herb. 15: 55 (1910). ST: A. Gattinger s.n., Sep 1888, USA: Tennessee: Davidson Co. (TENN; IST: US-80552).

Illustrations (Books): M.E.Barkworth et al, Flora of North America north of Mexico Vol 25 Poaceae, part 2 (2003) (461).

Derivation (Clifford \& Bostock 2007): L. flecto, bend; -ile, property. Culm geniculate at base and slender.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual, caespitose. Culms erect, 12-75 cm long. Culm-internodes solid, distally glabrous to hispid. Culm-nodes glabrous or pubescent or bearded. Leaf-sheaths glabrous on surface to hispid. Ligule a fringe of hairs, $0.5-1.5 \mathrm{~mm}$ long. Leaf-blades $6-25 \mathrm{~cm}$ long, $2-7 \mathrm{~mm}$ wide. Leaf-blade surface glabrous to hispid.

Inflorescence. Inflorescence a panicle. Panicle open, oblong, 7-20 cm long, $0.5-0.66$ of culm length, bearing few spikelets. Primary panicle branches ascending or spreading. Panicle branches glabrous in axils or pubescent in axils. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, acuminate, 3-3.4 mm long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.4-0.5$ length of spikelet, membranous, without keels, 5 -veined. Lower glume apex acute. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex acuminate.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 7 -veined, acuminate. Fertile lemma elliptic, dorsally compressed, $2.2-2.5 \mathrm{~mm}$ long, indurate, dark brown, shiny, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. North America.
Country /Province/State. Eastern Canada, North-central USA, Northeast USA, South-central USA, Southeastern USA. Ontario, Quebec. Kansas, Missouri. Michigan, Pennsylvania. Alabama, Arkansas, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Virginia.

Panicum fluviicola Steud. Syn. Pl. Gram. 89. (1854).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Gabon. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Jardin 1875, Gabon (P; IT: K).

Illustrations: None found.

Derivation (Clifford \& Bostock 2007): L. fluvius, river; -cola, dweller. Growing along river banks.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths glabrous. Culms erect, (30-)60230 cm long, (2-) $3.5-7 \mathrm{~mm}$ diam. Ligule a ciliolate membrane. Leaf-blades (13-)25-50 cm long, 3-12 mm wide. Leaf-blade apex attenuate, hardened.

Inflorescence. Inflorescence a panicle. Panicle open, oblong, 10-45 cm long. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, $2-2.5(-3) \mathrm{mm}$ long, falling entire.

Glumes. Glumes similar, exceeding apex of florets, thinner than fertile lemma, recurved at apex. Lower glume ovate, 0.5-0.7 length of spikelet, membranous, without keels, 3-5 -veined. Lower glume primary vein scabrous. Lower glume apex acuminate, muticous or mucronate. Upper glume ovate, membranous, without keels, 5 -veined. Upper glume apex acute to acuminate.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1.2-1.3 length of fertile lemma, 1 length of spikelet, membranous, 3 -veined, acute to acuminate. Fertile lemma oblong, dorsally compressed, $1.5-2 \mathrm{~mm}$ long, indurate, pallid, shiny, without keel, 5 -veined, more than 3 -veined. Lemma margins involute. Lemma apex obtuse. Palea involute.

Flower and Fruit. $n=9$ ( 1 ref TROPICOS).
Distribution (TDWG). Continent. Africa.
Country /Province /State. West Tropical Africa, West-Central Tropical Africa, Northeast Tropical Africa, East Tropical Africa, South Tropical Africa, Southern Africa. Burkina, Ghana, Guinea-Bissau, Guinea, Ivory Coast, Mali, Mauritania, Nigeria, Senegal, Sierre Leone, Togo, Niger. Gabon, DRC. Chad, Sudan. Tanzania. Angola, Malawi, Mozambique, Zambia, Zimbabwe. Namibia, Botswana, Kwazulu-Natal.

Panicum fontanale Swallen. Phytologia, xiv. 80 (1966).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Venezuela. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: J.A. Steyermark 76005, 3 Jul 1953, Venezuela: Bolívar: Chimant?Massif, Steyermark Falls (SteyermarkMer? on upper reaches of Río Tirica (leaft-hand fork), separating eastern part of Apácara-tepui from western part of Chimant?tepu?(Totrono-tepu?, on top of waterfall, alt. 1700-1750 m (US-2378641; IT: MO-2011350, MO-2012039).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. fontanus, spring; -alis, pertaining to. From Steyermark Falls, on Rmo Tirica, Venezuela.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Culms erect, 45-50 cm long. Culm-internodes distally glabrous. Leaf-sheaths as wide as blade at the collar, glabrous on surface. Ligule absent. Leaf-blades 15-30 cm long, $2-3.5 \mathrm{~mm}$ wide. Leaf-blade surface glabrous.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, 9 cm long. Primary panicle branches spreading or reflexed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, 3.2 mm long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.66 length of spikelet, membranous, without keels. Lower glume primary vein smooth or scaberulous. Lower glume apex acuminate. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface glabrous. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, acute. Fertile lemma elliptic, dorsally compressed, 2
mm long, indurate, pallid, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province/State. Northern South America. Venezuela.

Panicum funaense Vanderyst ex Robyns, nom superfl. Mem. Inst. Roy. Bot. Belge 1,6:19,32 (1932).
TYPE from DRC. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: ST: Vanderyst no. 2,496, octobre 1913, "region agricole du Bas-Kasai: Wombali (dans les Marais),..." ST: Vanderyst no. 6436, "bords de la Funa ...".

Illustrations (Books): G.V.Pope et al., Flora Zambesiaca 10 (3(1989):18, t. 4).
Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From the banks of the Funa, probably a river, in Zambia.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Culms 40-200 cm long, spongy. Ligule a fringe of hairs. Leaf-blades $15-35 \mathrm{~cm}$ long, $2-3 \mathrm{~mm}$ wide. Leaf-blade apex acute.

Inflorescence. Inflorescence a panicle. Panicle open, oblong, 15-25 cm long. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong, dorsally compressed, $2.5-3 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.25-0.33$ length of spikelet, membranous, without keels, 3 -veined. Lower glume apex obtuse. Upper glume ovate, 1 length of spikelet, membranous, without keels, 9 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 9 -veined, obtuse. Fertile lemma oblong, dorsally compressed, $2.5-3 \mathrm{~mm}$ long, indurate, pallid, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province /State. West-Central Tropical Africa, South Tropical Africa, Southern Africa. DRC. Zambia. Botswana.

TYPE from Sri Lanka. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: IT: G.H.K. Thwaites 894, no date, Sri Lanka: Central (US-1126003 (fragm.)).

Illustrations (Books): K.M.Matthew, Flora Palni Hills (1996) (852, Pl 852).
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Culms rambling, 150-200 cm long (long), rooting from lower nodes. Culm-internodes distally glabrous or pubescent. Culm-nodes glabrous. Leaf-sheaths keeled, glabrous on surface or hirsute, with tubercle-based hairs, outer margin hairy. Leaf-sheath oral hairs ciliate. Ligule a ciliolate membrane, $0.2-0.4 \mathrm{~mm}$ long. Collar glabrous. Leaf-blade base broadly rounded or cordate. Leaf-blades lanceolate, $2.5-15 \mathrm{~cm}$ long, $5-22 \mathrm{~mm}$ wide. Leaf-blade margins scaberulous, glabrous or ciliate, hairy at base. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $4-18 \mathrm{~cm}$ long. Primary panicle branches ascending or spreading. Panicle branches pubescent (hairs $1,5-2.5 \mathrm{~mm}$ ), glabrous in axils. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, $4-5 \mathrm{~mm}$ long, falling entire. Rhachilla internodes elongated between glumes. Rhachilla elongation stout, 0.5 mm long.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume lanceolate or ovate, $3.1-3.8 \mathrm{~mm}$ long, 0.8 length of spikelet, membranous, much thinner on margins, without keels, 3-5 -veined. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, with hyaline margins, without keels, 5-9 -veined. Upper glume surface glabrous or pubescent, hairy above. Upper glume apex acute.

Florets. Basal sterile florets 1, male or barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 7-9 -veined, acute. Palea of lower sterile floret 1 length of lemma. Fertile lemma elliptic, dorsally compressed, $2.9-3.5 \mathrm{~mm}$ long, indurate, dark brown, shiny, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 2-2.5 mm long. Stigmas purple. Caryopsis with adherent pericarp, ellipsoid, 2.2 mm long.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rhizomes short. Culms erect, robust, 70-130 cm long, $2-2.5 \mathrm{~mm}$ diam. Leaves mostly basal. Leaf-sheaths $11-25 \mathrm{~cm}$ long. Ligule a ciliate membrane, $1-$ 1.3 mm long. Leaf-blades involute, $25-45 \mathrm{~cm}$ long, $4-5 \mathrm{~mm}$ wide. Leaf-blade surface pilose, hairy adaxially.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $20-26 \mathrm{~cm}$ long. Primary panicle branches profusely divided. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, ciliate, hairy at tip.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, 2-3.5 mm long, 1.5 mm wide, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.5 length of spikelet, membranous, without keels, 3 -veined. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, acute. Fertile lemma elliptic, dorsally compressed, 11.5 mm long, indurate, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil, Southern South America. Brazil West Central, Brazil Northeast, Brazil Southeast, Brazil South. Argentina Northeast, Paraguay.

TYPE from Madagascar. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Madagascar: Im Sumpfen ohne genauere Standortsangabe, 8 Nov 1877, Rutenberg s.n. (HT: not designated) IGS cites Distribution as "Germany".

Illustrations (Books): J.Bosser, Graminees des Paturage et des Cultures a Madagascar (1969) (325, Fig 120).

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Rhizomes elongated. Glands capitate. Culms decumbent or rambling, weak, $100-200 \mathrm{~cm}$ long, rooting from lower nodes. Culm-internodes glandular, distally pilose, with capitate hairs. Culm-nodes pubescent. Leaf-sheaths glandular, pilose, with tubercle-based hairs or capitate hairs. Ligule a ciliolate membrane. Leaf-blades spreading or reflexed, conduplicate or involute, $1-$ 10 cm long, $1-7 \mathrm{~mm}$ wide, eglandular or glandular. Leaf-blade surface glabrous or pilose, sparsely hairy, with capitate hairs.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, 4-10 cm long, 2-6 cm wide, contracted about secondary branches. Primary panicle branches $4-5 \mathrm{~cm}$ long. Panicle branches glandular, pilose, with
simple hairs or capitate hairs. Spikelets solitary or in pairs. Fertile spikelets sessile or sessile and pedicelled. Pedicels present, 2-4 mm long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, 2-2.3 mm long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma, gaping. Lower glume lanceolate, $0.33-0.5$ length of spikelet, membranous, without keels, 1 -veined. Lower glume lateral veins absent. Lower glume apex acute, muticous or mucronate. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5-9-veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5-9 -veined, acute. Fertile lemma elliptic, dorsally compressed, $2-2.3 \mathrm{~mm}$ long, indurate, pallid, without keel, more than 3 -veined. Lemma margins convolute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province/State. Western Indian Ocean. Madagascar.

#### Abstract

Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 1, Aristidoideae a Pharoideae (2012) (353), A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (262, Fig. 216), A.Burkat, Flora Ilustrada de Entre Rios (Argentina), Pt II, Gramineas (1969) (304, Fig. 122), A.L.Cabrera, Flora de la Provincia de Buenos Aires, IV Pt 2 Gramineas (1970) (558, Fig. 147).

Derivation (Clifford \& Bostock 2007): in honor of Gouin (fl. 1864-67) who collected in Mexico. Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae. Habit, Vegetative Morphology. Perennial. Rhizomes elongated, scaly. Culms erect, $10-50 \mathrm{~cm}$ long. Culm-internodes 2.1-5.5 cm long, distally glabrous. Culm-nodes glabrous or pubescent. Leaf-sheaths 2.75.5 cm long, outer margin glabrous or hairy. Ligule a ciliolate membrane, $0.4-0.8 \mathrm{~mm}$ long. Collar dark, glabrous. Leaf-blades $4.5-13 \mathrm{~cm}$ long, $2-4 \mathrm{~mm}$ wide. Leaf-blade midrib evident, keeled beneath. Leafblade surface glabrous. Leaf-blade margins scaberulous.

Inflorescence. Inflorescence a panicle. Panicle contracted, lanceolate, $5.4-10 \mathrm{~cm}$ long, $1-6 \mathrm{~cm}$ wide, bearing few spikelets. Panicle axis angular, scaberulous, glabrous. Panicle branches glabrous in axils. Spikelets appressed, solitary. Fertile spikelets pedicelled. Pedicels present, $1-4.5 \mathrm{~mm}$ long, scabrous, glabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, 2.4-2.9 mm long, 0.91.1 mm wide, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 1-1.6 mm long, 0.4-0.6 length of spikelet, membranous, without keels, 1-7 -veined. Lower glume apex acute. Upper glume ovate, 2.2-2.7 mm long, 1 length of spikelet, membranous, without keels, $9-11$-veined. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 2.2-2.7 mm long, 1 length of spikelet, membranous, $9-11$-veined, acute. Palea of lower sterile floret $2-2.4 \mathrm{~mm}$ long. Fertile lemma ovate, dorsally compressed, $1.9-2.1 \mathrm{~mm}$ long, $0.8-1 \mathrm{~mm}$ wide, indurate, yellow, shiny, without keel, 7 -veined, more than 3 -veined. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1.5 mm long, orange. Caryopsis with adherent pericarp, ellipsoid, 1.5 mm long, dark brown. Embryo 0.4 length of caryopsis. Hilum elliptic.

Distribution (TDWG). Continent. North America, South America. Country /Province /State. Mexico. Gulf (Mexico). Caribbean, Brazil, Southern South America. Cuba. Brazil West Central, Brazil Northeast, Brazil Southeast, Brazil North, Brazil South. Argentina Northeast, Uruguay.

Mato Grosso, Sao Paulo Parana, Catarina, Rio Grande do Sul. Distrito Federal. Bahia, Ceará. Pará. Minas Gerais, Sao Paulo. Paraná, Rio Grande do Sul, Santa Catarina. Buenos Aires, Corrientes, Entre Rios, Santa Fe. Veracruz.

Panicum hallii Vasey. Bull. Torrey Bot. Club, xi. 61. (1884).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from USA. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: E. Hall 816, 18 May 1872, USA: Texas: Travis Co.: dry hills, Austin (US-76926; IT: NU).

Illustrations (Books): M.E.Barkworth et al, Flora of North America north of Mexico Vol 25 Poaceae, part 2 (2003) (468 as subsp. hallii \& filipes), F.W.Gould, The Grasses of Texas (1975) (475, Fig. 253 as var. hallii \& var. filipes).

Derivation (Clifford \& Bostock 2007): in honor of Elihu Hall (1822-82) United States farmer and amateur botanist.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Butt sheaths persistent and investing base of culm, with curly dead sheaths. Culms erect or geniculately ascending, 20-80 cm long. Culm-internodes glaucous. Culm-nodes glabrous or pubescent. Leaves mostly basal. Leaf-sheaths glabrous on surface or hirsute, with tubercle-based hairs. Ligule a fringe of hairs, $1-1.5 \mathrm{~mm}$ long. Leaf-blades $4-30 \mathrm{~cm}$ long, $2-10 \mathrm{~mm}$ wide, stiff, glaucous. Leaf-blade surface glabrous or hirsute, sparsely hairy, with tubercle-based hairs.

Inflorescence. Inflorescence a panicle. Panicle open, pyramidal, $6-20 \mathrm{~cm}$ long. Primary panicle branches ascending. Panicle branches stiff. Spikelets appressed, solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, acute or acuminate, $2.2-3.7(-3.9) \mathrm{mm}$ long, $1-1.5 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.33-0.66 length of spikelet, membranous, without keels, 5 -veined. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, acute. Fertile lemma elliptic or ovate, dorsally compressed, $2-3.5 \mathrm{~mm}$ long, indurate, dark brown, shiny, without keel. Lemma margins involute. Palea involute, indurate.

Distribution (TDWG). Continent. North America.
Country /Province /State. Northwest USA, North-central USA, South-central USA, Southeastern USA, Mexico. Oklahoma. New Mexico, Texas. Louisiana. Central Mexico, Northeast Mexico, Southwest Mexico.

Puebla. Aguascalientes, Coahuila, Chihuahua, Durango, Guanajuato, Hidalgo, Neuvo Leon, Queretaro, San Luis Potosi, Tamaulipas. Jalisco, Michoacan, Oaxaca.

Panicum hanningtonii Stapf. Prain, Fl. Trop. Afr. ix. 676 (1920).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Uganda. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: "Nile Land. Uganda or British East Africa: 2-7 [degr.] South Lat., without precise locality, ...", Hannington s.n. ; HT: Hannington s.n., K.

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): in honor of James Hannington (1847-1885) English-born Ugandan cleric and plant collector.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms erect or geniculately ascending, robust, 90-150(-180) cm long, without nodal roots or rooting from lower nodes. Lateral branches lacking. Leaf-sheaths glabrous on surface. Ligule a ciliate membrane. Leaf-blade base amplexicaul. Leaf-blades $15-45 \mathrm{~cm}$ long, $8-18 \mathrm{~mm}$ wide. Leaf-blade surface glabrous. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, oblong, dense, $20-35 \mathrm{~cm}$ long. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, (2-)2.5-3 mm long, falling entire. Rhachilla internodes elongated between glumes.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma, gaping. Lower glume ovate, $0.5-0.66$ length of spikelet, membranous, without keels, $1-3$-veined. Lower glume apex acuminate. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5-7 -veined. Upper glume apex acuminate.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 9 -veined, acuminate. Fertile lemma oblong, dorsally compressed, 1.5 mm long, indurate, pallid, shiny, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province /State. East Tropical Africa, South Tropical Africa. Tanzania. Malawi, Mozambique, Zambia.

Panicum haplocaulos Pilger. Engl. Jahrb. iii. 49. (1902).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Sudan. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: IT: G.A. Schweinfurth 2003, 1869, Sudan: Bahr Al-Ghazal (K, US-1720119).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): Gk. haploos, single; kaulos, stem. Culms unbranched.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms slender, 30-60 cm long. Ligule a ciliate membrane. Leaf-blades parallel-sided, $7-25 \mathrm{~cm}$ long, $2-6 \mathrm{~mm}$ wide. Leaf-blade surface scabrous, rough adaxially, glabrous. Leaf-blade apex acute.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, 5-20 cm long. Primary panicle branches spreading. Panicle branches capillary. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, acute, $2-3 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.5 length of spikelet, membranous, without keels, 3 -veined. Lower glume apex acute or acuminate. Upper glume ovate, 1 length of spikelet, membranous, without keels, 7 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 7 -veined, acute. Fertile lemma oblong, dorsally compressed, $1.5-2.5 \mathrm{~mm}$ long, indurate, dark brown or black, shiny, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province /State. West Tropical Africa, West-Central Tropical Africa, Northeast Tropical Africa, East Tropical Africa, South Tropical Africa. Senegal. Chad, Ethiopia (inc. Eritrea), Sudan. Tanzania. Malawi, Zambia.

Panicum harleyi Salariato, Morrone \& Zuloaga. Syst. Bot. 36 (1): 55 (2011).
TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Bahia, Rio de Contas, ca 5 km da cidade em direço ao Pico das Almas, 13?2'.58"S. 41 ?1' 03 " $\mathrm{W}, 1,107 \mathrm{~m}, 1$ Aug 2006, R.M.Harley 55486 (holotype: HUEFS).

Illustrations (Journals): Systematic Botany (36 (1): 57, Fig. 4 (2011)).
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.

Habit, Vegetative Morphology. Perennial. Culms decumbent, 50 cm long, rooting from lower nodes. Culm-internodes elliptical in section, thin-walled, $3-7 \mathrm{~cm}$ long, distally glabrous. Culm-nodes constricted, brown, glabrous. Leaf-sheaths $2-7 \mathrm{~cm}$ long, mostly shorter than adjacent culm internode, striately veined, glabrous on surface, outer margin hairy. Ligule a fringe of hairs, 0.7 mm long. Collar glabrous. Leaf-blade base broadly rounded. Leaf-blades lanceolate, $7-13 \mathrm{~cm}$ long, $3-6 \mathrm{~mm}$ wide. Leaf-blade surface pilose, sparsely hairy, hairy adaxially. Leaf-blade margins ciliate, hairy at base. Leaf-blade apex attenuate.

Inflorescence. Inflorescence a panicle. Peduncle 11 cm long, glabrous. Panicle open, pyramidal, 15 cm long, 7 cm wide, contracted about primary branches. Primary panicle branches 11 in number, distant, 2.55.5 cm long, bearing 3-4 fertile spikelets on each lower branch. Panicle axis with lower internodes $1-4.5$ cm long, hispid. Panicle branches glabrous in axils or pubescent in axils. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, clavate, $1-5 \mathrm{~mm}$ long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, $2.5-2.6 \mathrm{~mm}$ long, $0.8-$ 1 mm wide, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume elliptic, 1.5-1.7 mm long, 0.66 length of spikelet, membranous, without keels, 3-5 -veined. Lower glume primary vein scabrous. Lower glume apex acute. Upper glume elliptic, $2.5-2.6 \mathrm{~mm}$ long, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume primary vein scabrous. Upper glume surface papillose. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5 -veined, papillose, acute. Fertile lemma elliptic, dorsally compressed, 2.3-2.5 mm long, $0.6-0.7 \mathrm{~mm}$ wide, indurate, without keel, 5 -veined, more than 3-veined. Lemma surface papillose. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Lodicules 2, cuneate, 0.3 mm long. Anthers 3, 1.4 mm long. Caryopsis with adherent pericarp, ovoid, 1.1 mm long. Embryo 0.5 length of caryopsis. Hilum elliptic.

Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil Northeast.
Bahia.

Panicum havardii Vasey. Bull. Torrey Bot Club. xix.:95 (1887).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from USA. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Harvard s.n., 1881, USA: Texas: Guadalupe Mountains (US-82407).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): in honor of Valery Havard (1846-1927) United States physician and amateur botanist.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, culms solitary. Rhizomes elongated, scaly. Culms decumbent, $70-160 \mathrm{~cm}$ long. Culm-internodes glaucous, distally glabrous. Leaf-sheaths without keel, glabrous on surface. Ligule a ciliate membrane, 2-4 mm long. Leaf-blades flat or conduplicate, $5-10 \mathrm{~mm}$ wide, glaucous. Leaf-blade apex attenuate, filiform.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $20-40 \mathrm{~cm}$ long. Primary panicle branches spreading. Panicle branches stiff. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, acuminate, 6-8 mm long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.4-0.66 length of spikelet, membranous, without keels, 5 -veined. Lower glume apex acuminate. Upper glume ovate, 1 length of spikelet, membranous, without keels, 7 -veined. Upper glume apex attenuate.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, attenuate. Fertile lemma elliptic, dorsally compressed,
4.5-6 mm long, indurate, shiny, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Distribution (TDWG). Continent. North America. Country /Province/State. South-central USA, Mexico. New Mexico, Texas. Southeast Mexico. Chiapas.

TYPE from Annam. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Hayata 94, (P).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): In honor of Bunzo Hayata (1874-1934) Japanese botanist.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms rambling, 60-100 cm long. Lateral branches sparse. Leaf-sheaths outer margin hairy. Ligule a ciliolate membrane, 0.5 mm long. Leaf-blades lanceolate, $9-14$ cm long, $9-15 \mathrm{~mm}$ wide. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, 12-16 cm long. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong, dorsally compressed, obtuse, 3 mm long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume oblong, 0.66-0.75 length of spikelet, membranous, without keels, 3 -veined. Lower glume apex acute. Upper glume oblong, 1 length of spikelet, membranous, without keels, 9 -veined. Upper glume lateral veins prominent. Upper glume apex obtuse.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, scarious, 9 -veined, prominently veined, obtuse. Fertile lemma ovate, dorsally compressed, 2.5 mm long, indurate, grey, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers 1.6 mm long.
Distribution (TDWG). Continent. Tropical Asia.
Country /Province /State. Indo-China, Malesia. Thailand. Malaya.

Panicum hemitomon Schult. Mant. 2: 227. (1824).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

Basionym or Replaced Name: Panicum walteri Muhl., Descr. Gram. 108 (1817)
. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: No loc. nor specimen cited. Probably Georgia,.

Illustrations (Books): M.E.Barkworth et al, Flora of North America north of Mexico Vol 25 Poaceae, part 2 (2003) (486), F.W.Gould, The Grasses of Texas (1975).

Derivation (Clifford \& Bostock 2007): Gk. hemi-, half; tomon, cutting. Aquatic culms rigid but soft and flascid about the water line so liable to lean as if partly severed.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Rhizomes elongated. Stolons present. Butt sheaths pilose. Culms decumbent, $50-150 \mathrm{~cm}$ long. Ligule a ciliate membrane, 1 mm long. Leaf-blades lanceolate, $12-30$ cm long, $7-15 \mathrm{~mm}$ wide. Leaf-blade surface scabrous, rough adaxially, glabrous.

Inflorescence. Inflorescence a panicle. Panicle contracted, linear, $10-30 \mathrm{~cm}$ long, $1-1.5 \mathrm{~cm}$ wide, contracted about primary branches. Primary panicle branches appressed, $2-10 \mathrm{~cm}$ long, bearing spikelets almost to the base. Panicle branches bearded in axils. Spikelets appressed, solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate, dorsally compressed, acute, 2-2.6 mm long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.5 length of spikelet, membranous, without keels, 3 -veined. Lower glume primary vein scabrous. Lower glume apex acute. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume primary vein scabrous. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5 -veined, acute. Palea of lower sterile floret 0.9 length of lemma. Fertile lemma elliptic, dorsally compressed, $1.8-2.4 \mathrm{~mm}$ long, cartilaginous, shiny, without keel. Lemma margins involute. Lemma apex acute. Palea involute, cartilaginous.

Distribution (TDWG). Continent. North America.
Country /Province /State. South-central USA, Southeastern USA. Texas. Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina.

TYPE from Jamaica. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Habitat in Jamaicae et Hispaniolae graminosis, Swartz s.n.

Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 1, Aristidoideae a Pharoideae (2012) (354), M.E.Barkworth et al, Flora of North America north of Mexico Vol 25 Poaceae, part 2 (2003) (465), A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (259, Fig. 212), J.A.Steyermark et al, Flora of the Venezuelan Guayana Vol. 8 (2004) (199, Fig. 150).

Illustrations (Journals): Ann. Missouri Bot. Gard. (83: 250, Fig. 21 (1996)).
Derivation (Clifford \& Bostock 2007): L. hairy. Plant hairy in respect to all or some parts.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms $100-200 \mathrm{~cm}$ long, $5-10 \mathrm{~mm}$ diam. Culm-nodes constricted, pubescent. Lateral branches sparse, arising from mid culm. Leaf-sheaths hispid, with tubercle-based hairs. Leaf-sheath oral hairs setose (behind ligule), erect. Ligule a ciliate membrane, $1.5-2 \mathrm{~mm}$ long. Collar bearded. Leaf-blades $35-70 \mathrm{~cm}$ long, $10-25 \mathrm{~mm}$ wide. Leaf-blade surface glabrous. Leaf-blade margins scabrous.

Inflorescence. Inflorescence a panicle. Peduncle 10-22 cm long. Panicle open, elliptic, dense, 30-50 cm long, $7-15 \mathrm{~cm}$ wide. Primary panicle branches ascending, bearing spikelets almost to the base. Spikelets appressed, solitary. Fertile spikelets pedicelled. Pedicels present, $0.5-1.5 \mathrm{~mm}$ long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, acute, $1.8-2.1 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.9-1.2 \mathrm{~mm}$ long, 0.5 length of spikelet, membranous, without keels, 3 -veined. Lower glume apex acute. Upper glume ovate, $1.8-2.1 \mathrm{~mm}$ long, 1 length of spikelet, membranous, without keels, 7 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, $1.8-2.1 \mathrm{~mm}$ long, 1 length of spikelet, membranous, $7-9$-veined, acute. Palea of lower sterile floret 0.66 length of lemma. Fertile lemma elliptic, dorsally compressed, $1.3-1.4 \mathrm{~mm}$ long, indurate, shiny, without keel. Lemma lateral veins distinct. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers $3,0.7 \mathrm{~mm}$ long, purple. Caryopsis with adherent pericarp, ellipsoid, 1 mm long, pallid.

Distribution (TDWG). Continent. North America, South America.
Country /Province /State. South-central USA, Mexico. Texas. Northeast Mexico, Gulf (Mexico), Southwest Mexico, Southeast Mexico. Derivation (Clifford \& Bostock 2007): L. hirtus, hairy; caulis, stem. Culms hairy.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual, caespitose. Culms erect or geniculately ascending or decumbent, $25-80 \mathrm{~cm}$ long, $1-2.5 \mathrm{~mm}$ diam., rooting from lower nodes. Culm-internodes distally glabrous or hispid, with tubercle-based hairs. Culm-nodes pubescent. Lateral branches ample, arising from lower culm or mid culm. Leaf-sheaths hispid, with tubercle-based hairs. Ligule a ciliate membrane, $1.5-2.5 \mathrm{~mm}$ long. Leaf-blades $7-27 \mathrm{~cm}$ long, $6-15 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pilose, with tubercle-based hairs.

Inflorescence. Inflorescence a panicle. Peduncle pubescent above. Panicle open, ovate, 13-35 cm long. Primary panicle branches $6-13 \mathrm{~cm}$ long. Panicle branches straight. Spikelets appressed, solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, acute, $2.4-2.5 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $1.2-1.5 \mathrm{~mm}$ long, $0.5-0.66$ length of spikelet, membranous, without keels, $3-5$-veined. Lower glume apex acute. Upper glume ovate, $2.1-2.2 \mathrm{~mm}$ long, 1 length of spikelet, membranous, without keels, 7 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, $2.2-2.4 \mathrm{~mm}$ long, 1 length of spikelet, membranous, 9 -veined, acute. Palea of lower sterile floret 0.33 length of lemma. Fertile lemma elliptic, dorsally compressed, $1.5-1.8 \mathrm{~mm}$ long, indurate, shiny, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3, $0.9-1 \mathrm{~mm}$ long, orange. Caryopsis with adherent pericarp, ellipsoid, 1.31.4 mm long, pallid.

Distribution (TDWG). Continent. North America, South America.

Illustrations (Journals): Ann. Missouri Bot. Gard. (83: 255, Fig. 22 (1996)).
Derivation (Clifford \& Bostock 2007): L. hispidus, bearing coarse stiff hairs; folium, leaf. Leaves hairy.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms 50 cm long. Culm-internodes distally glabrous or hispid. Leaf-sheaths hispid, with tubercle-based hairs. Ligule a ciliate membrane, $2-3 \mathrm{~mm}$ long. Leafblades 15 cm long, 8 mm wide. Leaf-blade surface hispid, with tubercle-based hairs. Leaf-blade margins scabrous.

Inflorescence. Inflorescence a panicle, terminal and axillary. Peduncle hispid above. Panicle open, ovate, 23 cm long, 15 cm wide. Primary panicle branches appressed. Panicle branches stiff, scabrous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $2-8 \mathrm{~mm}$ long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, $3.5-3.6 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma, gaping. Lower glume ovate, $2-$ 2.2 mm long, $0.6-0.7$ length of spikelet, membranous, without keels, 5 -veined. Lower glume primary vein scabrous. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5-7 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5-7 -veined, acute. Fertile lemma elliptic or ovate, dorsally compressed, $2.3-2.4 \mathrm{~mm}$ long, indurate, pallid, shiny, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.

Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Ethiopia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: ST: G.H.W. Schimper 115, 3 Oct 1837, Ethiopia: Tigre (P; IST: K, L, US-1093884). ST: Quartin Dillon s.n., Ethiopia: Ambaetcha (P).

Illustrations (Books): S.Phillips, Poaceae (Gramineae) in I.Hedberg \& S.Edwards, Flora of Ethiopia and Eritrea (1995) (208, Fig 86).

Derivation (Clifford \& Bostock 2007): in honor of Christian Gottlob Ferdinand Hochstetter (1829-84) German anthropologist and geologist.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Culms erect or rambling, slender, 20-60 cm long. Ligule a ciliate membrane. Leaf-blades spreading or reflexed, lanceolate, parallel-sided, 3-7(-12) cm long, 5-15 mm wide. Leaf-blade venation without cross veins or with distinct cross veins. Leaf-blade surface glabrous or pilose. Leaf-blade apex acute or acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, 4-6(-13) cm long. Panicle branches capillary. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong, dorsally compressed, obtuse or acute, 2-$2.5(-3) \mathrm{mm}$ long, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume oblong or ovate, 0.66 length of spikelet, membranous, dark green, without keels, 3(-5) -veined. Lower glume lateral veins ribbed. Lower glume surface glabrous or pubescent. Lower glume apex obtuse or acute. Upper glume ovate, 1 length of spikelet, membranous, dark green, without keels, 7 -veined. Upper glume lateral veins ribbed. Upper glume surface glabrous or pubescent. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 7 -veined, acute. Fertile lemma oblong, dorsally compressed, 1.52.5 mm long, indurate, pallid, shiny, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. $2 n=54$ ( 1 ref TROPICOS).
Distribution (TDWG). Continent. Africa.
Country /Province /State. West Tropical Africa, West-Central Tropical Africa, Northeast Tropical Africa, East Tropical Africa. Ghana, Nigeria, Sierre Leone. Cameroon, Annobon, Principe \& Sao Tome, Rwanda, DRC. Eritrea, Ethiopia (inc. Eritrea). Kenya, Tanzania, Uganda.

Panicum homblei Robyns. Mem. Inst. Col. Belge, 4to, Sect. Sc. Nat. \& Med. i. Fasc. 6 reimpr. p. 35 (1932).

Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online.
TYPE from DRC. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: IT: H.A. Homble 134, Feb 1912, Zaire: Shaba (US-1538737 (fragm.)).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): In honor of Henri Antoine Homble (1883-1921) Belgian botanist.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose, clumped loosely. Basal innovations intravaginal. Culms erect, slender, 40-60 cm long, firm, 2-3 -noded. Culm-internodes unequal, the upper longer, terete, striate, distally glabrous. Culm-nodes pubescent. Lateral branches lacking. Leaf-sheaths deciduous, longer than adjacent culm internode, glabrous on surface to pubescent, outer margin hairy. Ligule a ciliolate membrane. Leaf-blades $12-18 \mathrm{~cm}$ long, $2-5.5 \mathrm{~mm}$ wide, stiff. Leaf-blade surface glabrous to pubescent. Leaf-blade margins scabrous. Leaf-blade apex attenuate.

Inflorescence. Inflorescence a panicle, embraced at base by subtending leaf. Panicle open, oblong or ovate, $12-18 \mathrm{~cm}$ long. Primary panicle branches ascending, 1 -nate, subdividing 3-4 times, rebranched near base, $6-9 \mathrm{~cm}$ long. Panicle branches flexuous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, filiform, unequal, $4-8 \mathrm{~mm}$ long, tip discoid.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate or ovate, dorsally compressed, acute, 2.5 mm long, falling entire, readily shedding fertile florets.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5 -veined, acute. Fertile lemma elliptic, dorsally compressed, 1.5 mm long, chartaceous, pallid, without keel, more than 3-veined. Lemma surface tuberculate (verruculose). Lemma margins involute. Lemma apex acute. Palea involute, chartaceous. Palea surface tuberculate (verruculose).

Distribution (TDWG). Continent. Africa.
Country /Province/State. West-Central Tropical Africa. DRC.

## Panicum humidorum Buch.-Ham. ex Hook.f. Fl. Brit. India 7:53 (1896).

Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), J.F.Veldkamp, Poaceae ms (Flora Malesiana), N.L.Bor, Grasses of Burma, Ceylon, India and Pakistan (1960).

TYPE from India. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: LT: Hamilton in Wallich 8721, (K). LT designated by Veldkamp, Blumea 41: 193 (1996).

Illustrations (Books): H.B.Gilliland, Grasses of Malaya (1971) (Pl 5).
Derivation (Clifford \& Bostock 2007): L. humidus, moist. Growing in moist places.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Culms erect or geniculately ascending, 30-150 cm long. Culm-nodes glabrous. Leaf-sheaths outer margin hairy. Ligule a ciliate membrane. Leaf-blade base broadly rounded or cordate. Leaf-blades linear or lanceolate, $5-20 \mathrm{~cm}$ long, $4-10 \mathrm{~mm}$ wide.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, effuse, $10-40 \mathrm{~cm}$ long, $2-20 \mathrm{~cm}$ wide. Primary panicle branches $2-20 \mathrm{~cm}$ long. Panicle branches scaberulous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $1-8 \mathrm{~mm}$ long, scaberulous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, acute, $1-1.5 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $1-1.5 \mathrm{~mm}$ long, 0.9 length of spikelet, membranous, without keels, 3 -veined. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, acute. Fertile lemma elliptic, dorsally compressed, $1-1.25 \mathrm{~mm}$ long, indurate, shiny, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers 3, $0.5-1 \mathrm{~mm}$ long. Caryopsis with adherent pericarp.
$n=18$ ( 2 refs TROPICOS).
Distribution (TDWG). Continent. Tropical Asia.
Country /Province /State. Indian Subcontinent, Indo-China, Malesia. Myanmar, Thailand. Borneo, Java, Sumatra, Malaya.

Sikkim. Assam, Nagaland. Kerala.

Illustrations (Books): S.Phillips, Poaceae (Gramineae) in I.Hedberg \& S.Edwards, Flora of Ethiopia and Eritrea (1995) (205, Fig 85).

Derivation (Clifford \& Bostock 2007): Gk. hymen, membrane; chilos, green fodder. Spikelets green except for lemma of lower floret that has a hyaline margin.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms geniculately ascending, slender, 14-120 cm long, rooting from lower nodes. Ligule a ciliate membrane. Leaf-blade base broadly rounded or cordate. Leafblades spreading or reflexed, lanceolate, $1.2-7(-8.5) \mathrm{cm}$ long, $1.2-5(-10) \mathrm{mm}$ wide. Leaf-blade surface glabrous or pilose, with simple hairs or clavellate hairs. Leaf-blade margins scaberulous. Leaf-blade apex acute.

Inflorescence. Inflorescence a panicle. Panicle open, oblong, 2-10 cm long, contracted about primary branches. Primary panicle branches bearing spikelets almost to the base. Panicle branches glabrous (rarely) or pilose, with simple hairs or clavellate hairs. Spikelets appressed, solitary. Fertile spikelets pedicelled. Pedicels present, straight.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong, dorsally compressed, obtuse, $2-2.5(-3) \mathrm{mm}$ long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.5-0.66$ length of spikelet, membranous, without keels, $0-1$-veined. Lower glume lateral veins absent. Lower glume apex obtuse. Upper glume ovate, 1 length of spikelet, membranous, without keels, 7-9veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 7-9 -veined, acute. Fertile lemma oblong, dorsally compressed, $2-3 \mathrm{~mm}$ long, indurate, pallid, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province /State. West Tropical Africa, West-Central Tropical Africa, Northeast Tropical Africa, East Tropical Africa, South Tropical Africa, Southern Africa, Western Indian Ocean. Guinea, Ivory Coast, Nigeria. Cameroon, Rwanda, DRC. Ethiopia (inc. Eritrea). Kenya, Tanzania, Uganda. Angola, Mozambique, Zambia, Zimbabwe. Botswana, Limpopo, Mpumalanga, Swaziland, Kwazulu-Natal, Eastern Cape. Madagascar.

TYPE from Madagascar. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Madagascar centr.: cime du Mont Ibity, ...", Perrier de la Bathie 10.771.

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From Mt. Ibity, Madagascar.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Culms erect, 60-100 cm long. Lateral branches sparse. Leaf-sheaths glabrous on surface. Ligule a ciliolate membrane. Leaf-blades linear or lanceolate, 7-10 cm long, 5 mm wide. Leaf-blade venation with 8 secondary veins. Leaf-blade surface glabrous. Leaf-blade margins scaberulous. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, obovate, $8-16 \mathrm{~cm}$ long. Primary panicle branches appressed or ascending. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $1-3 \mathrm{~mm}$ long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the
lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, obtuse, 2 mm long, falling entire.

Glumes. Glumes similar, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, 1.5-1.7 mm long, 0.75 length of spikelet, membranous, without keels, 3 -veined. Lower glume apex obtuse. Upper glume ovate, 1.9 mm long, 0.9 length of spikelet, membranous, without keels, 3 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, obtuse. Fertile lemma ovate, dorsally compressed, 2 mm long, indurate, pallid, shiny, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1.3 mm long.
Distribution (TDWG). Continent. Africa.
Country /Province /State. Western Indian Ocean. Madagascar.

Panicum ikopense A. Camus. Bull. Soc. Bot. France, 99: 63 (1952).

Derivation (Clifford \& Bostock 2007): L. unadorned. Glumes and sterile lemma glabrous except for a few hairs at their apices.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Culms rambling or scandent, 200-1500 cm long, 4-7 mm diam., woody. Culm-internodes $7-18 \mathrm{~cm}$ long. Lateral branches ample. Leaves cauline. Leaf-sheaths pilose, with tubercle-based hairs, outer margin glabrous or hairy. Ligule a ciliate membrane, $0.5-1 \mathrm{~mm}$ long. Leafblades lanceolate, $6-30 \mathrm{~cm}$ long, $10-25 \mathrm{~mm}$ wide, flaccid, light green or dark green, discolorous with last colour beneath. Leaf-blade surface glabrous or pubescent, densely hairy (when young). Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Peduncle pubescent above. Panicle open, elliptic or oblong, 816 cm long, $3-6 \mathrm{~cm}$ wide. Primary panicle branches ascending, $1-3$ nate, $3-8 \mathrm{~cm}$ long. Panicle axis pubescent. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $0.3-1 \mathrm{~mm}$ long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the
lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, compressed slightly, subacute, $1.8-2.2 \mathrm{~mm}$ long, $0.8-1 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.5-0.75$ length of spikelet, membranous, much thinner on margins, without keels, 3-5 -veined. Lower glume apex acute. Upper glume elliptic, 1 length of spikelet, chartaceous, with hyaline margins, dark green, without keels, 5 -veined. Upper glume surface puberulous, hairy above. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, chartaceous, much thinner on margins, dark green, 5 -veined, puberulous, hairy above, acute. Fertile lemma elliptic, dorsally compressed, $1.5-1.8 \mathrm{~mm}$ long, indurate, yellow, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. $n=18$ ( 2 refs TROPICOS).
Distribution (TDWG). Continent. Temperate Asia, Tropical Asia, Australasia.
Country /Province /State. China, Eastern Asia. China South Central, China Southeast. Taiwan. Indian Subcontinent, Indo-China, Malesia, Papuasia. Eastern Himalaya, India. Myanmar, Thailand, Vietnam. Borneo, Java, Malaya, Philippines, Sulawesi, Sumatra. New Guinea. Australia (*). Queensland.

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From Kazuma Range, Zimbabwe. Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms geniculately ascending or decumbent, weak, 10-35 cm long. Ligule a ciliate membrane. Leaf-blades $3-4.5 \mathrm{~cm}$ long, $2-5 \mathrm{~mm}$ wide. Leaf-blade apex acute.

Inflorescence. Inflorescence a panicle, terminal and axillary. Panicle open, oblong, 3-8 cm long, contracted about primary branches. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, $2.5-3 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma, gaping. Lower glume ovate, 0.5 length of spikelet, membranous, without keels, 1 -veined. Lower glume lateral veins absent. Lower glume apex acuminate. Upper glume ovate, 1 length of spikelet, membranous, without keels, 7 veined. Upper glume apex acuminate.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, acuminate. Fertile lemma oblong, dorsally compressed, $2-2.5 \mathrm{~mm}$ long, indurate, pallid, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province/State. South Tropical Africa. Zimbabwe.

Panicum khasianum Munro ex Hook. f. Fl. Brit. Ind. vii. 54. (1896).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, S-L Chen et al, Flora of China 22 (Poaceae) (2006), J.F.Veldkamp, Poaceae ms (Flora Malesiana), N.L.Bor, Grasses of Burma, Ceylon, India and Pakistan (1960).

TYPE from India. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: India: Khasia Hills, in marshes, 4-6000 ft, Griffith 6498 (LT: K; ILT: US-1445180 (fragm.)).

Illustrations (Books): H.J.Noltie, The Grasses of Bhutan (2000) (691, Fig. 38), S-L Chen et al, Flora of China, Illustrations, Poaceae (2007) (Fig. 685).

Derivation (Clifford \& Bostock 2007): L. -ana, indicating connection. From the Khasia Hills, India.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Culms prostrate, 100-200 cm long, rooting from lower nodes. Culm-nodes glabrous. Leaf-sheaths glabrous on surface or hispid, outer margin glabrous or hairy. Leaf-sheath oral hairs bearded. Ligule a fringe of hairs. Leaf-blade base cordate. Leaf-blades lanceolate, $15-30 \mathrm{~cm}$ long, $1.8-3 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pubescent. Leaf-blade margins ciliate.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $15-30 \mathrm{~cm}$ long. Primary panicle branches $7-15 \mathrm{~cm}$ long. Panicle branches scaberulous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, obtuse or subacute, 22.25 mm long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.75 mm long, 0.25 length of spikelet, membranous, without keels, 3 -veined. Lower glume apex obtuse. Upper glume lanceolate or ovate, 1 length of spikelet, membranous, without keels, $3-5$-veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, obtuse. Fertile lemma ovate, dorsally compressed, 2-2.25 mm long, chartaceous, without keel. Lemma surface pubescent. Lemma margins involute. Lemma apex apiculate, woolly. Palea involute, chartaceous.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
$n=18$ ( 2 refs TROPICOS).
Distribution (TDWG). Continent. Temperate Asia, Tropical Asia.
Country /Province /State. China. China South Central. Indian Subcontinent, Indo-China, Malesia. Eastern Himalaya, India. Myanmar. Sumatra.

Yunnan. Darjeeling, Bhutan, Sikkim. Meghalaya, Nagaland. West Bengal.

Panicum konaense Whitney \& Hosaka. Occas. Papers Bishop Mus., Honolulu, xii. No. 5, p. 3 (1936).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), W.D.Clayton \& N.Snow, Key to Pacific Grasses (2010).

TYPE from Hawaii. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: IT: L.D. Whitney 4136, 7 Apr 1936, Hawaii: Hawaii I.: Hawaii Co. (US-1674369).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From the Kona district, formerly the Kingdom of Kona, Hawaii.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual, caespitose. Culms 10-60 cm long. Culm-internodes distally glabrous or pilose, with tubercle-based hairs. Culm-nodes bearded. Lateral branches lacking. Leaf-sheaths puberulous or pilose, with tubercle-based hairs. Ligule a ciliate membrane, $0.8-1.6 \mathrm{~mm}$ long. Leaf-blades $5-18 \mathrm{~cm}$ long, $2-5 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or puberulous or pilose, hairy on both sides, with tubercle-based hairs. Leaf-blade margins ciliate.

Inflorescence. Inflorescence a panicle. Panicle open, lanceolate, $4-16 \mathrm{~cm}$ long. Primary panicle branches ascending. Panicle axis scabrous, pilose. Panicle branches scabrous, glabrous or pilose. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate, dorsally compressed, acuminate, 1.5-3.9 mm long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 1 length of spikelet, membranous, without keels, 3-5 -veined. Lower glume surface pilose, hairy generally or above. Lower glume hairs 1-3 mm long. Lower glume apex acuminate. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface glabrous (or a few hairs). Upper glume apex acuminate.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5-7 -veined, acute. Palea of lower sterile floret $0.25-0.33$ length of lemma. Fertile lemma elliptic, dorsally compressed, $1.2-1.4 \mathrm{~mm}$ long, indurate, black, shiny, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers $3,0.5-0.8 \mathrm{~mm}$ long. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Pacific.
Country /Province /State. North-central Pacific. Hawaii.

Panicum lachnophyllum Benth. Fl. Austral. vii. 486. (1878).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), D.Sharp, D. \& B.K.Simon, AusGrass (2002).

TYPE from Australia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: "Queensland. Moreton Bay, ...", C. Stuart..

Illustrations (Books): S.W.L.Jacobs, R.D.B.Whalley \& D.J.B.Wheeler,, Grasses of New South Wales, 4th edn (2008) (316), T.D.Stanley \& E.Ross, Flora of South East Queensland, Gramineae (1989) (195, Fig. 30), D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002).

Images: K.Domin, Bibliotheca Botanica 85 (1915) (315, Fig. 71 as var. tropicum).
Derivation (Clifford \& Bostock 2007): Gk. lachnos, wool; phyllon, leaf. Leaf-blades densely hairy.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Stolons present. Basal innovations extravaginal. Culms decumbent, 15-30 cm long, wiry, 7-8 -noded, rooting from lower nodes. Lateral branches lacking or sparse. Leaf-sheaths striately veined, pilose, with tubercle-based hairs, outer margin hairy. Ligule a ciliolate membrane. Leaf-blade base broadly rounded, with a brief petiole-like connection to sheath. Leaf-blades spreading, linear or lanceolate, $1.5-10 \mathrm{~cm}$ long, $3-9 \mathrm{~mm}$ wide, firm. Leaf-blade midrib evident. Leaf-blade surface scabrous, pilose, with tubercle-based hairs. Leaf-blade apex acute or acuminate.

Inflorescence. Inflorescence a panicle. Panicle contracted, lanceolate, $2-7 \mathrm{~cm}$ long. Primary panicle branches simple or sparsely divided. Panicle branches scabrous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $0.5-2 \mathrm{~mm}$ long, scabrous, tip discoid.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or oblong, dorsally compressed, obtuse or subacute, $2-2.5 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume oblate, 0.25 length of spikelet, membranous, without keels, 1 -veined. Lower glume lateral veins absent. Lower glume apex obtuse or acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, obtuse. Fertile lemma elliptic or oblong, dorsally compressed, $1.75-2 \mathrm{~mm}$ long, indurate, without keel. Lemma surface striate. Lemma margins involute, pubescent. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Australasia.
Country /Province /State. Australia. Queensland, New South Wales.
North, Central, South East. Coast.

Panicum lacustre Hitchcock \& Ekman. U. S. Dept. Agric., Misc. Publ. No. 243: 253 (1936).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Cuba. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Ekman 17878, 31 Oct 1923, Cuba: Pinar del Río: Laguna de la Máquina (US-1387529; IT: MO, NY-71083, US-1163098).

Illustrations (Books): M.E.Barkworth et al, Flora of North America north of Mexico Vol 25 Poaceae, part 2 (2003) (471), A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (254, Fig. 205).

Derivation (Clifford \& Bostock 2007): L. lacus, lake; -estre, place of growth. Growing in or around lakes.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Culms erect, $100-150 \mathrm{~cm}$ long, spongy, rooting from lower nodes. Culm-internodes distally glabrous. Leaf-sheaths glabrous on surface. Ligule a ciliate membrane, $1-2 \mathrm{~mm}$ long. Leaf-blades flat or conduplicate, $15-30 \mathrm{~cm}$ long, 2 mm wide. Leaf-blade surface scaberulous, pilose, sparsely hairy, hairy adaxially.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $20-30 \mathrm{~cm}$ long, contracted about secondary branches. Primary panicle branches ascending, whorled at lower nodes. Panicle branches scabrous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $1-2 \mathrm{~mm}$ long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate or oblong, dorsally compressed, acute, 2 mm long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.25-0.33$ length of spikelet, membranous, without keels. Lower glume apex obtuse. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 7 -veined, acute. Fertile lemma elliptic, dorsally compressed, 1.8 mm long, indurate, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. North America, South America.
Country /Province /State. Southeastern USA. Florida. Caribbean. Cuba.

Panicum laetum Kunth. Rev. Gram. ii. t. 113. (1831).

Images: D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002);.

Derivation (Clifford \& Bostock 2007): L. laeve - smooth and node (node), referring to the glabrous nodes.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual, caespitose. Butt sheaths sparsely hairy. Culms erect, 15-60 cm long, compressible, 2-4 -noded. Culm-internodes distally glabrous or pilose, with tubercle-based hairs. Culm-nodes brown, glabrous or pubescent. Lateral branches lacking or sparse. Leaf-sheaths glabrous on surface or pilose, with tubercle-based hairs. Ligule a ciliolate membrane, 1-2 mm long. Leaf-blades 5-20 cm long, $2.5-6 \mathrm{~mm}$ wide, flaccid. Leaf-blade midrib prominent beneath. Leaf-blade surface glabrous or pilose, sparsely hairy, with tubercle-based hairs. Leaf-blade apex acute or acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $5-20 \mathrm{~cm}$ long. Primary panicle branches spreading, 1 -nate, branching divaricately. Panicle axis glabrous or pilose, with tubercle-based hairs. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, $0.5-5 \mathrm{~mm}$ long, tip cupuliform.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or ovate, dorsally compressed, acuminate, $2.4-3.5 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume oblate, clasping, 0.33 length of spikelet, membranous, pallid, without keels, $0-5$-veined. Lower glume lateral veins absent or obscure. Lower glume apex truncate or obtuse. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 7-9 -veined. Upper glume apex acuminate.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 7-9 -veined, acuminate. Palea of lower sterile floret 0.75 length of lemma. Fertile lemma elliptic, dorsally compressed, $1.75-2 \mathrm{~mm}$ long, indurate, pallid or light brown, shiny, without keel, 7 -veined, more than 3 -veined. Lemma lateral veins prominent. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1 mm long. Caryopsis with adherent pericarp, oblong, 1.5 mm long, pallid. Embryo 0.5 length of caryopsis. Hilum punctiform.

Distribution (TDWG). Continent. Europe (*), Australasia.
Region. Northern Europe (*).
Country /Province /State. : GB Aliens (Ryves et al). Australia. Western Australia, Northern Territory, South Australia, Queensland, New South Wales.

Kimberley, Eremean. Darwin \& Gulf, Victoria R \& Barkly Tableland, Central Australia. NW \& Lake Eyre, Southern. North, Central, South East, Inland. Western Slopes, Western Plains.

Panicum lanipes Mez. Engl. Jahrb. 1vii. 187 (1921).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from South Africa. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Meyer s.n., 1869, South Africa: Hatam's Berg, Calvinia (B; IT: PRE (fragm.)).

Illustrations (Books): L.K.A. Chippindall, Grasses and Pastures of South Africa (1955) (337, Fig 294), M.A.N.Muller, Grasses of South West Africa/Namibia (1984).

Derivation (Clifford \& Bostock 2007): L. lana, wool; pes, foot. Leaf-sheaths woolly at the base.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths woolly. Culms $20-90 \mathrm{~cm}$ long. Ligule a ciliate membrane. Leaf-blades $7-20 \mathrm{~cm}$ long, $2-3(-5) \mathrm{mm}$ wide, glaucous. Leaf-blade surface glabrous or hirsute, with tubercle-based hairs. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, 7-20 cm long. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, acute, (2-)2.5-3 mm long, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.33-0.66$ length of spikelet, membranous, without keels, $0-3$-veined. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5-7 -veined, acute. Fertile lemma oblong, dorsally compressed, 22.5 mm long, indurate, pallid, shiny, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province/State. Southern Africa. Namibia, Botswana, Northern Cape.

Panicum larcomianum D.K.Hughes. Kew Bull. 1923, 326. (1923).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), D.Sharp, D. \& B.K.Simon, AusGrass (2002).

Images: D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002);.
Derivation (Clifford \& Bostock 2007): L. -anum, denoting connection. From Mt Larcom, Quennsland, Australia.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Cataphylls evident. Culms erect, 40-100 cm long, 4-8 noded. Culm-nodes glabrous. Leaf-sheaths glabrous on surface. Ligule a ciliolate membrane, 0.7-1.3 mm long. Leaf-blades filiform, flat or conduplicate, $9-35 \mathrm{~cm}$ long, $2-4 \mathrm{~mm}$ wide. Leaf-blade surface smooth, glabrous.

Inflorescence. Inflorescence a panicle. Panicle open, lanceolate or ovate, 12-26 cm long. Primary panicle branches ascending or spreading, $5-12 \mathrm{~cm}$ long, bearing $20-60$ fertile spikelets on each lower branch. Panicle axis smooth or scabrous. Panicle branches smooth or scaberulous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $0.8-4.5 \mathrm{~mm}$ long, scabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, $2-2.7 \mathrm{~mm}$ long, falling entire. Rhachilla internodes elongated between glumes. Rhachilla elongation 0.1 mm long.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume obovate, 0.5-0.8 mm long, $0.25-0.33$ length of spikelet, membranous, without keels, 1 -veined. Lower glume lateral veins absent. Lower glume apex truncate or acute. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 7-9 -veined. Upper glume apex acute or acuminate.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 7-9 -veined, acute or acuminate. Palea of lower sterile floret 1 length of lemma. Fertile lemma elliptic, dorsally compressed, $1.6-2 \mathrm{~mm}$ long, indurate, without keel. Lemma lateral veins distinct. Lemma margins involute. Lemma apex obtuse or acute. Palea involute, indurate.

Flower and Fruit. Anthers 3, $0.8-1.1 \mathrm{~mm}$ long. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Australasia.
Country /Province /State. Australia. Queensland.
North, Central, South East, Inland.

Panicum laticomum Nees. Fl. Afr. Austr. 43. (1841).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from South Africa. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: IT: Drège s.n., South Africa: Durban (Port Natal) (K).

Illustrations (Books): L.K.A. Chippindall, Grasses and Pastures of South Africa (1955) (326, Fig 283).

Derivation (Clifford \& Bostock 2007): L. latus, broad; coma, head of hair. Panicle very lax and erect, with filiform to capillary branches arranged in fascicles and so resembling a head of hair.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.

Habit, Vegetative Morphology. Annual. Culms decumbent or rambling, slender, 30-200 cm long. Ligule a ciliate membrane. Leaf-blade base asymmetrical. Leaf-blades lanceolate, tapering towards sheath, $6-10 \mathrm{~cm}$ long, (5-)10-28 mm wide. Leaf-blade surface glabrous or pilose. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, oblong or ovate or obovate, (6-)10-20(-24) cm long. Primary panicle branches profusely divided. Panicle branches capillary. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, gibbous, acute, 1.5-2 mm long, falling entire. Rhachilla internodes elongated between glumes.

Glumes. Glumes similar, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, 0.5 length of spikelet, membranous, without keels, 3 -veined. Lower glume surface glabrous or pilose. Lower glume apex acute. Upper glume oblong, 0.66 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface glabrous or pilose. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret ovate, 1 length of spikelet, membranous, 5-7 -veined, glabrous or pilose, acute. Fertile lemma oblong, dorsally compressed, $1.5-2 \mathrm{~mm}$ long, indurate, pallid, without keel, more than 3-veined. Lemma surface granulose. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province /State. Northeast Tropical Africa, East Tropical Africa, South Tropical Africa, Southern Africa. Somalia. Kenya, Tanzania. Malawi, Mozambique, Zimbabwe. Limpopo, Swaziland, Kwazulu-Natal, Eastern Cape.

Panicum latzii R.D. Webster. Australian Paniceae (Poac.): 132 (1987).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), D.Sharp, D. \& B.K.Simon, AusGrass (2002).

TYPE from Australia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Australia, Victoria R. Crossing: Symon 5214 (CANB holo, AHUC, K, NT).

Illustrations: None found.
Images: D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002);-
Derivation (Clifford \& Bostock 2007): in honour of Peter Kenneth Latz (1941-) Australian plant ecologist.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Rootstock evident. Cataphylls evident. Culms erect, 40-80 cm long, 3-8 -noded. Culm-nodes glabrous. Leaf-sheaths smooth, glabrous on surface, outer margin glabrous. Ligule a ciliate membrane, $1.2-3 \mathrm{~mm}$ long. Leaf-blades filiform, $14-40 \mathrm{~cm}$ long, $2.5-8 \mathrm{~mm}$ wide. Leaf-blade surface scabrous, glabrous. Leaf-blade margins scabrous.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $20-40 \mathrm{~cm}$ long. Primary panicle branches spreading, $15-30 \mathrm{~cm}$ long, bearing $24-80$ fertile spikelets on each lower branch. Panicle axis scabrous. Panicle branches scabrous, bearded in axils. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $1-7 \mathrm{~mm}$ long, scabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate, dorsally compressed, 3.3-4.1 mm long, $1-1.3 \mathrm{~mm}$ wide, falling entire. Rhachilla internodes elongated between glumes.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume obovate, $0.8-1.2$ mm long, 0.25 length of spikelet, membranous, without keels, 1 -veined. Lower glume lateral veins absent. Lower glume apex truncate. Upper glume lanceolate, 1 length of spikelet, membranous, without keels, 9 veined. Upper glume apex acute or acuminate.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, lanceolate, 1 length of spikelet, membranous, 9 -veined, acute. Palea of lower sterile floret 1 length of lemma. Fertile lemma elliptic, dorsally compressed, $2.2-2.5 \mathrm{~mm}$ long, indurate, without keel. Lemma lateral veins distinct. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1.3-1.5 mm long. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Australasia.

Country /Province /State. Australia. Western Australia, Northern Territory, Queensland. Kimberley, Eremean. Darwin \& Gulf, Victoria R \& Barkly Tableland. North.

Panicum lepidulum Hitchcock \& Chase. Contrib. U. S. Nat. Herb. xv. 75 (1910).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Mexico. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: C.G. Pringle 497, 22 Sep 1885, Mexico: Chihuahua: rocky hills near Chihuahua (US-155163; IT: F, MEXU, NY, US-742174, W).

Illustrations (Journals): Ann. Missouri Bot. Gard. (83: 257, Fig. 23 (1996)).
Derivation (Clifford \& Bostock 2007): L. lepidus, pretty; -ula, diminutive. Plant attractive in appearance.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, culms solitary or caespitose. Culms erect, 25-70 cm long, wiry. Culm-nodes pubescent. Lateral branches sparse. Leaves cauline. Leaf-sheaths as wide as blade at the collar, pilose, with tubercle-based hairs. Ligule a ciliate membrane, 2 mm long. Leaf-blades erect or spreading, flat or conduplicate, $7-30 \mathrm{~cm}$ long, $5-10 \mathrm{~mm}$ wide, glaucous. Leaf-blade surface glabrous or pilose, hairy on both sides.

Inflorescence. Inflorescence a panicle, exserted or embraced at base by subtending leaf. Peduncle scaberulous above, glabrous or pilose above. Panicle open, elliptic, $7-20 \mathrm{~cm}$ long, $3-10 \mathrm{~cm}$ wide. Primary panicle branches ascending. Panicle branches flexuous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, acuminate, 4-4.2 mm long, 1.5 mm wide, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.5 length of spikelet, membranous, without keels, 5 -veined. Lower glume primary vein scabrous. Lower glume apex acuminate. Upper glume ovate, 1 length of spikelet, membranous, without keels, 7-9 -veined. Upper glume primary vein scabrous. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, $7-9$-veined, scabrous, rough on midvein (above), acute. Fertile lemma elliptic, dorsally compressed, 3-3.5 mm long, indurate, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp, ellipsoid, 2.3-2.5 mm long.
Distribution (TDWG). Continent. North America, South America.
Country /Province /State. Mexico. Central Mexico, Northeast Mexico, Southwest Mexico. Mesoamerica. Guatemala.

Distrito Federal, Morelos, Puebla. Aguascalientes, Chihuahua, Durango, Guanajuato, Hidalgo, Queretaro, San Luis Potosi, Zacatecas. Sonora. Jalisco, Michoacan, Oaxaca.

Panicum leucoblepharis Trin. Clav. Agrost. 234 (1822).
Illustrations: None found.
Derivation (Clifford \& Bostock 2007): Gk. leukos, white; blepharis, eye-lash. Leaf-blades bearing long white hairs.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, mat forming. Culms $6-15 \mathrm{~cm}$ long, $0.3-0.5 \mathrm{~mm}$ diam. Culm-internodes distally glabrous. Culm-nodes pubescent. Leaves heterophyllous with a basal winter rosette. Leaf-sheaths glabrous on surface, outer margin hairy. Ligule a ciliolate membrane, $0.1-0.2 \mathrm{~mm}$ long. Leaf-blade base broadly rounded. Leaf-blades lanceolate, $2-6 \mathrm{~cm}$ long, $3-7 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pilose, sparsely hairy. Leaf-blade margins ciliate.

Inflorescence. Inflorescence a panicle. Panicle open, pyramidal, 2-4 cm long, 1-3 cm wide. Panicle axis pilose. Panicle branches pilose. Spikelets spreading, solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, obtuse, $1.3-1.5 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.6-0.7 \mathrm{~mm}$ long, 0.5 length of spikelet, membranous, without keels, 1 -veined. Lower glume lateral veins absent. Lower glume apex acute. Upper glume ovate, $1.2-1.3 \mathrm{~mm}$ long, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, $1.2-1.3 \mathrm{~mm}$ long, 1 length of spikelet, membranous, 5 -veined, obtuse. Fertile lemma elliptic, dorsally compressed, 1 mm long, indurate, shiny, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers $3,0.3 \mathrm{~mm}$ long, purple.
Distribution (TDWG). Continent. North America, South America.
Country /Province /State. South-central USA, Southeastern USA. Mesoamerica, Caribbean. Cuba, Dominican Republic, Haiti, Jamaica, Puerto Rico.

Panicum ligulare Nees ex Trin. Gram. Panic. 206 (1826).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: ST: K.F.P. von Martius s.n., Apr 1820, Brazil: Para (US-974617 (fragm. ex M \& photo)). LT: Martius 3800-floriferous part, V. sp. imperfectum Brasil (n. ab Esenb.) (LE-TRIN-0792.01). LT designated by Zuloaga, Ann. Missouri Bot. Gard. 74(3): 475 (1987).

Illustrations (Books): S.A.Renvoize, The Grasses of Bahia, 1984 (152, Fig. 54).
Derivation (Clifford \& Bostock 2007): L. ligula, small tongue; -aris, pertaining to. Ligule conspicuous.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Cataphylls evident. Butt sheaths woolly. Culms erect, 130200 cm long. Culm-internodes thick-walled or solid, $8-24 \mathrm{~cm}$ long, distally glabrous or pilose. Culm-nodes glabrous or pubescent. Leaf-sheaths $8-23 \mathrm{~cm}$ long, hispid, outer margin hairy. Ligule a ciliate membrane, $1.8-3.2 \mathrm{~mm}$ long. Collar pilose. Leaf-blade base broadly rounded. Leaf-blades linear or lanceolate, 30-55 cm long, $9-19 \mathrm{~mm}$ wide. Leaf-blade midrib conspicuous. Leaf-blade surface glabrous or pilose, densely hairy, hairy on both sides. Leaf-blade margins scabrous, ciliate.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, effuse, $47-65 \mathrm{~cm}$ long, $15-30 \mathrm{~cm}$ wide. Primary panicle branches spreading. Panicle branches scabrous, pubescent in axils. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, clavate, $2-20 \mathrm{~mm}$ long, scabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, $4.4-5.7 \mathrm{~mm}$ long, $1.2-$ 1.6 mm wide, falling entire. Rhachilla internodes elongated between glumes. Floret callus evident, $0.8-1.1$ mm long, winged, with lateral wings.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 2.9-3.8 mm long, $0.5-0.75$ length of spikelet, membranous, without keels, $7-9$-veined. Lower glume primary vein scabrous. Lower glume inner surface pubescent. Lower glume apex acuminate. Upper glume ovate, 1 length of spikelet, membranous, without keels, 7 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, acuminate. Palea of lower sterile floret 3-3.3 mm long. Fertile lemma ovate, dorsally compressed, $2.5-3.2 \mathrm{~mm}$ long, indurate, pallid, shiny, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp, 2.4 mm long.
Distribution (TDWG). Continent. South America.

Country /Province /State. Northern South America, Brazil. Venezuela. Brazil West Central, Brazil Northeast, Brazil North, Brazil Southeast.

Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From Lukwangula Plateau, Tanzania. Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths pubescent. Culms 60-140 cm long. Leaves mostly basal. Leaf-sheaths wider than blade at the collar, pilose, with simple hairs or clavellate hairs. Ligule a ciliolate membrane. Leaf-blades lanceolate, $19-48 \mathrm{~cm}$ long, $7-16 \mathrm{~mm}$ wide, stiff. Leaf-blade surface pilose, sparsely hairy or moderately hairy or densely hairy, with tubercle-based hairs or clavellate hairs. Leaf-blade apex acute, hardened.

Inflorescence. Inflorescence a panicle. Panicle open, oblong or ovate, (10-)15-30 cm long. Primary panicle branches ascending or spreading. Panicle branches capillary, pilose, with clavellate hairs. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong or ovate, dorsally compressed, $2.5-3.5 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume oblong, $0.25-0.5$ length of spikelet, membranous, without keels, 3 -veined. Lower glume apex lobed. Upper glume oblong, $0.75-1$ length of spikelet, membranous, purple, without keels, (3-)5 -veined. Upper glume apex lobed.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, oblong, 1 length of spikelet, membranous, 7 -veined, pilose, hairy above (tip), lobed. Fertile lemma oblong, dorsally compressed, coriaceous, pallid, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, coriaceous.

Distribution (TDWG). Continent. Africa.
Country /Province/State. East Tropical Africa, South Tropical Africa. Tanzania. Malawi.

Panicum luridum Hack ex S. Eliiot. Journ. Linn. Soc. xxix. 64. (1891).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online.
TYPE from Madagascar. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: ST: G.F. Scott Elliot 1745, no date, Madagascar: near Antananarivo (US-80747 (fragm.)).

Illustrations (Books): J.Bosser, Graminees des Paturage et des Cultures a Madagascar (1969) (335, Fig 125).

Derivation (Clifford \& Bostock 2007): drab yellow. Lemmas or glumes brownish-yellow.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.

Habit, Vegetative Morphology. Perennial. Culms geniculately ascending or decumbent, 20-60 cm long. Lateral branches sparse. Leaves mostly basal. Ligule a ciliolate membrane. Leaf-blades linear or lanceolate, $3-6 \mathrm{~cm}$ long, $3-5 \mathrm{~mm}$ wide. Leaf-blade surface pilose, sparsely hairy. Leaf-blade margins ciliate, hairy at base.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, 3-5 cm long. Primary panicle branches 1 nate. Panicle branches scabrous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, obtuse, 2 mm long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.5 length of spikelet, membranous, without keels, 1 -veined. Lower glume lateral veins absent. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, obtuse. Fertile lemma ovate, dorsally compressed, 2 mm long, indurate, yellow, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province /State. Western Indian Ocean. Madagascar.

Panicum luzonense J. \& C. Presl. Rel. Haenk. i. 308. (1830).

Images: H.B.Gilliland et al., Flora of Malaya Vol. 3 Grasses (1971); (as P. cambogiense).
Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From Luzon, Philippines.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms geniculately ascending, 10-120 cm long, without nodal roots or rooting from lower nodes. Culm-nodes pubescent. Leaf-sheaths without keel, hispid, with tubercle-based hairs, outer margin hairy. Ligule a fringe of hairs, $1.5-2 \mathrm{~mm}$ long. Collar pubescent. Leafblades linear or lanceolate, $18-25 \mathrm{~cm}$ long, $6-15 \mathrm{~mm}$ wide. Leaf-blade surface glabrous to hirsute, hairy on both sides. Leaf-blade margins smooth or scaberulous, tuberculate-ciliate, hairy at base. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $15-50 \mathrm{~cm}$ long. Primary panicle branches ascending or spreading. Panicle branches smooth or scaberulous, with scattered hairs or glabrous, glabrous in axils or pubescent in axils. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or oblong, dorsally compressed, $1.5-2.6 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes dissimilar, shorter than spikelet or reaching apex of florets, thinner than fertile lemma. Lower glume ovate, clasping, $0.5-1.1 \mathrm{~mm}$ long, $0.33-0.5$ length of spikelet, membranous, without keels, $3-$ 9 -veined. Lower glume apex obtuse or acute. Upper glume ovate, $1.3-1.8 \mathrm{~mm}$ long, $0.8-1$ length of spikelet, membranous, without keels, 7-9 -veined. Upper glume apex obtuse or acute.

Florets. Basal sterile florets 1, male or barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, $1.5-2.6 \mathrm{~mm}$ long, 1 length of spikelet, membranous, $5-9$-veined, obtuse or acute.

Palea of lower sterile floret 1 length of lemma. Fertile lemma elliptic, dorsally compressed, 1.3-2.2 mm long, indurate, shiny, without keel, 5 -veined, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1 mm long. Caryopsis with adherent pericarp, obovoid, 1.4 mm long.
Distribution (TDWG). Continent. Temperate Asia, Tropical Asia, Australasia, Pacific.
Country /Province /State. China, Eastern Asia. China South Central, Hainan, China Southeast. Taiwan. Indian Subcontinent, Indo-China, Malesia, Papuasia. India, Sri Lanka. Illustrations (Journals): Ann. Missouri Bot. Gard. (83: 259, Fig. 24 (1996)), Iheringia (42: 11, Fig.917 (1992)).

Derivation (Clifford \& Bostock 2007): L. magnus, large. Spikelets large for the genus.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.

Habit, Vegetative Morphology. Perennial, caespitose. Culms $20-30 \mathrm{~cm}$ long. Culm-internodes terete, distally glabrous. Culm-nodes glabrous. Lateral branches lacking. Leaf-sheaths longer than adjacent culm internode, striately veined, hirsute, with tubercle-based hairs, outer margin hairy. Ligule a ciliate membrane, 0.5 mm long. Leaf-blades involute, $10-12 \mathrm{~cm}$ long, 2 mm wide. Leaf-blade surface hirsute, with tuberclebased hairs. Leaf-blade margins ciliate. Leaf-blade apex attenuate.

Inflorescence. Inflorescence a panicle, comprising 7-12 fertile spikelets. Peduncle 25 cm long, glabrous. Panicle open, ovate, $3-6 \mathrm{~cm}$ long, 1 cm wide, bearing few spikelets. Primary panicle branches $3-$ 4 in number, ascending, 1-3 cm long. Panicle branches scabrous, pubescent in axils. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, clavate, scabrous, ciliate, hairy at tip.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, $5.5-5.8 \mathrm{~mm}$ long, $1.5-$ 2 mm wide, falling entire. Rhachilla internodes elongated between glumes. Rhachilla elongation 0.5 mm long.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 3.5 mm long, 0.75 length of spikelet, membranous, without keels, 7-9 -veined. Lower glume primary vein scabrous. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 9 -veined. Upper glume inner surface pubescent. Upper glume apex acuminate.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, mid-green or purple, 9 -veined, acuminate. Palea of lower sterile floret $2.5-2.8 \mathrm{~mm}$ long. Fertile lemma elliptic, dorsally compressed, $3.4-3.6 \mathrm{~mm}$ long, $1.5-1.7 \mathrm{~mm}$ wide, indurate, yellow, shiny, without keel, 7 -veined, more than 3 -veined. Lemma surface papillose. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp, ellipsoid, 2.2 mm long. Embryo 0.5 length of caryopsis. Hilum elliptic.

Distribution (TDWG). Continent. South America.
Country /Province/State. Brazil. Brazil South.
Santa Catarina.

Panicum mahafalense A.Camus. Bull. Soc. Bot. France, lxxii. 620. (1925).

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Culms rambling, $45-150 \mathrm{~cm}$ long. Ligule a ciliate membrane. Leaf-blade base simple or broadly rounded. Leaf-blades lanceolate or ovate, 6-10 cm long, 1525 mm wide. Leaf-blade venation with distinct cross veins. Leaf-blade surface smooth or scabrous, glabrous or pilose, with tubercle-based hairs. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, oblong, 15-30 cm long. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, $2.5-3 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.5-$ 0.66 length of spikelet, membranous, without keels, $0-1(-3)$-veined. Lower glume lateral veins absent or obscure. Lower glume surface asperulous. Lower glume apex obtuse. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface asperulous. Upper glume apex acute or acuminate.

Florets. Basal sterile florets 1, male or barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, scaberulous, acute or acuminate. Fertile lemma oblong, dorsally compressed, $2-2.5 \mathrm{~mm}$ long, indurate, pallid, shiny, without keel, more than 3veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province /State. East Tropical Africa. Kenya, Tanzania, Uganda.

Panicum massaiense Stapf. Mez, Bot. Jahrb. Engler 34:144 (1904).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Kenya. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: ST: Stuhlmann 4307, Massai-Steppe ST: Petreus s.n., Mossambik.

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From the Massai steppe, Uganda.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.

Habit, Vegetative Morphology. Annual. Culms erect or geniculately ascending, robust or of moderate stature or slender, $30-150 \mathrm{~cm}$ long. Lateral branches ample. Leaf-sheaths hispid. Ligule a ciliate membrane. Leaf-blades tapering towards sheath or parallel-sided, 10-25(-30) cm long, 3-8(-13) mm wide. Leaf-blade surface glabrous or hispid. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, (6-)10-20(-30) cm long. Panicle branches capillary, straight or flexuous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, $2.4-3 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma, gaping. Lower glume ovate, $0.5-0.66$ length of spikelet, membranous, without keels, $1(-5)$-veined. Lower glume lateral veins absent or obscure. Lower glume apex acuminate. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5-7 -veined. Upper glume apex acuminate.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 7 -veined, acuminate. Fertile lemma oblong, dorsally compressed, 1.75 mm long, indurate, pallid, shiny, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province /State. West-Central Tropical Africa, East Tropical Africa, South Tropical Africa. Rwanda. Tanzania, Uganda. Malawi, Mozambique, Zambia.

Panicum merkeri Mez. Engl. Jahrb. iv. 144. (1904).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Malawi. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: ST: M. Merker s.n., 1902, Tanzania: Kilimanjaro (B; US-80785 (fragm.)). IST: Whyte s.n., Südl. Nyassaland (K).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): in honor of Merker Moritz ( -1908 ) who collected in East Africa.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Rhizomes short. Culms erect or geniculately ascending, robust, $100-175 \mathrm{~cm}$ long, (3-)4-6 mm diam. Culm-nodes glabrous or bearded. Leaf-sheaths hispid, with tubercle-based hairs. Ligule a ciliate membrane. Leaf-blades parallel-sided, $20-35 \mathrm{~cm}$ long, $7-15 \mathrm{~mm}$ wide. Leaf-blade surface hispid, hairy on both sides, with tubercle-based hairs. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, elliptic or oblong, 25-30 cm long. Primary panicle branches ascending. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, acute, 2-2.5 mm long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume oblate, $0.25-0.33$ length of spikelet, membranous, without keels, $1(-3)$-veined. Lower glume lateral veins absent or obscure. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, $9(-11)$-veined. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, $9(-11)$-veined, acute. Fertile lemma oblong, dorsally compressed, $1.5-2 \mathrm{~mm}$ long, indurate, pallid, shiny, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.

Derivation (Clifford \& Bostock 2007): in honor of Thomas Livingstone Mitchell (1792-1855) Scotsborn Australian surveyor and explorer.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Rootstock evident. Cataphylls evident. Culms erect, 100200 cm long, $4-8$-noded. Culm-nodes glabrous. Leaf-sheaths antrorsely scabrous, glabrous on surface or pilose, outer margin glabrous or hairy. Ligule a ciliate membrane, $0.8-1.5 \mathrm{~mm}$ long. Leaf-blades $10-50 \mathrm{~cm}$ long, 6-14 mm wide. Leaf-blade surface scabrous, glabrous.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $20-40 \mathrm{~cm}$ long. Primary panicle branches spreading, $12-30 \mathrm{~cm}$ long, bearing 40-200 fertile spikelets on each lower branch. Panicle axis scabrous. Panicle branches scabrous, glabrous in axils. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $2-10 \mathrm{~mm}$ long, scabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, $2.5-3 \mathrm{~mm}$ long, $0.9-$ 1.1 mm wide, falling entire. Rhachilla internodes elongated between glumes. Rhachilla elongation 0.150.25 mm long.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $1.2-1.6 \mathrm{~mm}$ long, 0.5-0.6 length of spikelet, membranous, without keels, 3-5 -veined. Lower glume apex acute. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 7 -veined. Upper glume apex obtuse or acute, muticous or mucronate.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5-7 -veined, acute, muticous or mucronate. Fertile lemma elliptic, dorsally compressed, $2-2.5 \mathrm{~mm}$ long, indurate, without keel. Lemma lateral veins obscure. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1.3-1.6 mm long. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Europe (*), Australasia.
Region. Northern Europe (*).

Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From Mohave County, Arizona, USA.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms 2-6(-8) cm long, 1 -noded. Culm-internodes distally pilose, with tubercle-based hairs. Lateral branches ample, arising from lower culm. Leaf-sheaths striately veined, pilose, with tubercle-based hairs. Ligule a ciliate membrane, 0.2 mm long. Leaf-blades $1-4 \mathrm{~cm}$ long, (1-)2-3 mm wide. Leaf-blade surface glabrous or pilose, hairy abaxially, with tubercle-based hairs. Leafblade margins tuberculate-ciliate.

Inflorescence. Inflorescence a panicle, shorter than basal leaves, embraced at base by subtending leaf. Panicle open, oblong, dense, $1-2 \mathrm{~cm}$ long. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, compressed slightly, 2 mm long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, clasping, 0.33 length of spikelet, membranous, without keels, 1 -veined. Lower glume lateral veins absent. Lower glume apex obtuse or acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 7 -veined.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 7 -veined. Fertile lemma elliptic, dorsally compressed, 1.5 mm long, indurate, yellow or light brown, shiny, without keel. Lemma surface smooth. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1 mm long, purple. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. North America.
Country /Province/State. Southwestern USA, South-central USA. Arizona. New Mexico.

Panicum monticola Hook. f. Journ. Linn. Soc. vii. 226. (1864).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Cameroon Mt. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Mann 1353, Cameroun: Cameroon Mountain (K).

Illustrations (Books): S.Phillips, Poaceae (Gramineae) in I.Hedberg \& S.Edwards, Flora of Ethiopia and Eritrea (1995) (208, Fig 86).

Derivation (Clifford \& Bostock 2007): L. mons, mountain; -cola, dweller. Growing on mountains.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Culms decumbent, slender, 30-100 cm long. Ligule a ciliate membrane. Leaf-blades spreading, lanceolate or ovate, tapering towards sheath, (3-)7-15 cm long, $5-25 \mathrm{~mm}$ wide, membranous. Leaf-blade venation without cross veins or with distinct cross veins. Leafblade surface pilose, with tubercle-based hairs. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open or contracted, oblong or ovate, (5-)10-25 cm long. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate or ovate, dorsally compressed, acuminate, $2.2-3.5(-4) \mathrm{mm}$ long, falling entire.

Glumes. Glumes similar or dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.25-0.5(-0.66)$ length of spikelet, hyaline or membranous, without keels, $0-1$-veined. Lower glume lateral veins absent. Lower glume surface glabrous or pubescent or pilose. Lower glume apex obtuse
or acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface glabrous or pubescent or pilose. Upper glume apex acute or acuminate.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, glabrous or pubescent or pilose, acute or acuminate. Fertile lemma oblong, dorsally compressed, $2.5-3.5 \mathrm{~mm}$ long, indurate, pallid, shiny, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1.5 mm long.
$n=19$ ( 1 ref TROPICOS).
Distribution (TDWG). Continent. Africa.
Country /Province /State. West Tropical Africa, West-Central Tropical Africa, Northeast Tropical Africa, East Tropical Africa, South Tropical Africa, Southern Africa. Cameroon, Annobon, Principe \& Sao Tome, Bioko, Rwanda, DRC. Ethiopia (inc. Eritrea). Kenya, Tanzania, Uganda. Limpopo.

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Brasil: Distrito Federal: campo cerrado perturbado ao longo da rodovia BR-020 entre Sobradinho e o Centro de Pesquisas Agropecuarias do Cerrado (CPAC/EMBRAPA), 28 Nov 1988, Valls, Faraco \& Zuloaga 11951 (HT: CEN; IT: SI).

Illustrations (Journals): Iheringia (42: 21, Fig.1-8 (1992)).
Derivation (Clifford \& Bostock 2007): Gk mystax, hair on upper lip; sipue, case. Base of lemma subtending the grain invested with long hairs.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths persistent and investing base of culm, with compacted dead sheaths. Culms erect, $45-106 \mathrm{~cm}$ long. Culm-internodes terete, striate, distally glabrous. Culm-nodes glabrous. Leaf-sheaths $6-14 \mathrm{~cm}$ long, longer than adjacent culm internode, hirsute, outer margin hairy. Ligule a ciliate membrane, $0.8-1.2 \mathrm{~mm}$ long. Leaf-blades involute, $20-45 \mathrm{~cm}$ long, 3-5 mm wide, stiff. Leaf-blade surface scaberulous, rough abaxially, pilose, sparsely hairy, hairy adaxially. Leaf-blade margins scabrous, ciliate, hairy at base. Leaf-blade apex attenuate, muticous or pungent.

Inflorescence. Inflorescence a panicle, comprising 10-20 fertile spikelets. Peduncle $30-70 \mathrm{~cm}$ long, glabrous. Panicle open, ovate, $9-20 \mathrm{~cm}$ long, $1-6 \mathrm{~cm}$ wide, bearing few spikelets. Primary panicle branches appressed or ascending, simple, 6-12 cm long. Panicle axis scabrous, glabrous or hispid. Panicle branches glabrous in axils or bearded in axils. Spikelets appressed, solitary. Fertile spikelets pedicelled. Pedicels present, scabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, $7.2-9.2 \mathrm{~mm}$ long, $2-$ 2.4 mm wide, falling entire. Spikelet callus square, 0.5 mm long. Rhachilla internodes elongated between glumes.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 4.55.8 mm long, $0.5-0.75$ length of spikelet, membranous, without keels, $7-9$-veined. Lower glume primary vein scabrous. Lower glume apex acute. Upper glume ovate, $6.8-8 \mathrm{~mm}$ long, 1 length of spikelet, membranous, without keels, $9-11$-veined. Upper glume primary vein scabrous. Upper glume apex acuminate.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, $6-7.2 \mathrm{~mm}$ long, 1 length of spikelet, membranous, 7-9 -veined, acute. Palea of lower sterile floret $4.8-5.2 \mathrm{~mm}$ long, pilose, adorned on flanks. Fertile lemma elliptic, dorsally compressed, 4.8 mm long, 1.6 mm wide, indurate, yellow or black, suffused with last colour, without keel, 7 -veined, more than 3-veined. Lemma margins involute, ciliate, hairy at base. Palea involute, indurate.

Flower and Fruit. Anthers $3,3 \mathrm{~mm}$ long. Caryopsis with adherent pericarp, ellipsoid, 3.5 mm long. Embryo 0.5 length of caryopsis. Hilum punctiform.

Illustrations: None found.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms geniculately ascending, weak, $30-55 \mathrm{~cm}$ long. Leafsheaths as wide as blade at the collar or narrower than blade at the collar. Ligule a ciliate membrane. Leafblades spreading or reflexed, lanceolate, $1.5-3.5(-4.5) \mathrm{cm}$ long, $1-4 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pilose, sparsely hairy. Leaf-blade margins glabrous or ciliate (clavellately). Leaf-blade apex acute or acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, oblong or ovate, $1-6 \mathrm{~cm}$ long, contracted about primary branches. Primary panicle branches bearing spikelets almost to the base. Panicle branches pilose, with clavellate hairs. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong, dorsally compressed, $1.2-1.5 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.33-0.5$ length of spikelet, membranous, without keels, 0 -veined. Lower glume lateral veins absent. Lower glume apex acute. Upper glume oblong, 1 length of spikelet, membranous, without keels, 7 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 7 -veined, obtuse. Fertile lemma oblong, dorsally compressed, $1.2-1.5 \mathrm{~mm}$ long, indurate, pallid, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province /State. West-Central Tropical Africa, East Tropical Africa, South Tropical Africa. DRC. Uganda. Zambia.

Panicum niihauense St. John. Occas. Papers Bishop Mus., Honolulu, 9: No. 14, 5 (1931).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), W.D.Clayton \& N.Snow, Key to Pacific Grasses (2010).

TYPE from Hawaii. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: J.F.G. Stokes s.n., Jan 1912, Hawaii: Kauai I.: Kauai Co. (BISH; IT: US-1535752, US-80877 (fragm. ex BISH)).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From Niihau, one of the Hawaiian Islands.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms $50-125 \mathrm{~cm}$ long. Culm-internodes distally pubescent. Culm-nodes pubescent. Lateral branches lacking. Leaves cauline. Leaf-sheaths puberulous or hispid. Ligule a ciliate membrane, 1.4-3.2 mm long. Leaf-blades $15-35 \mathrm{~cm}$ long, $7-19 \mathrm{~mm}$ wide. Leaf-blade surface pubescent, densely hairy.

Inflorescence. Inflorescence a panicle. Panicle open, lanceolate, $13-35 \mathrm{~cm}$ long, contracted about primary branches. Primary panicle branches appressed. Panicle axis puberulous. Panicle branches scaberulous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, acuminate, 2.6-3.2 mm long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume lanceolate, 0.9-1 length of spikelet, membranous, without keels, 5 -veined. Lower glume apex acuminate. Upper glume lanceolate, 1 length of spikelet, membranous, without keels, 5-7 -veined. Upper glume apex acuminate.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, $7-9$-veined, acute. Palea of lower sterile floret $0.2-0.25$ length of lemma. Fertile lemma elliptic, dorsally compressed, $1.2-1.5 \mathrm{~mm}$ long, indurate, shiny, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers 3, $0.9-1.2 \mathrm{~mm}$ long. Caryopsis with adherent pericarp.

## Distribution (TDWG). Continent. Pacific.

Country /Province /State. North-central Pacific. Hawaii.

Panicum nodatum Hitchcock \& Chase. Contrib. U. S. Nat. Herb. xv. 293 (1910).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from USA. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: A.S. Hitchcock 3865, 7 Aug 1904, USA: Texas: Kenedy Co.: Sarita (US-592749).

Illustrations (Books): C-C Hsu, Flora of Taiwan, Vol 5 (1978) (562).
Derivation (Clifford \& Bostock 2007): L. nodus, knot; -atum, possessing. Lateral culms with numerous swollen nodes.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rootstock evident. Culms decumbent, 20-50(65) cm long, wiry. Culm-internodes papillose, distally pubescent. Culm-nodes swollen. Lateral branches ample, arising from mid culm and upper culm. Leaves all alike. Leaf-sheaths mostly shorter than adjacent culm internode, hispid, with tubercle-based hairs. Ligule a fringe of hairs, 1 mm long. Leaf-blade base broadly rounded. Leaf-blades ascending, lanceolate, $3-9 \mathrm{~cm}$ long, $3-9 \mathrm{~mm}$ wide. Leaf-blade surface puberulous, hairy on both sides. Leaf-blade margins tuberculate-ciliate, hairy at base. Leaf-blade apex abruptly acute.

Inflorescence. Inflorescence a panicle, terminal and axillary. Panicle open, ovate, 4-13 cm long, 2-3 cm wide, bearing few spikelets. Primary panicle branches ascending, branching divaricately. Spikelets appressed, solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, with attenuate base, dorsally compressed, $3.5-4.3 \mathrm{~mm}$ long, 1.7 mm wide, falling entire. Rhachilla internodes elongated between glumes.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $1.5-2 \mathrm{~mm}$ long, 0.33 length of spikelet, hyaline, without keels, 1 -veined. Lower glume lateral veins absent. Lower glume surface pubescent. Lower glume apex acuminate. Upper glume ovate, 0.9 length of spikelet, membranous, without keels, 7 -veined. Upper glume surface pubescent. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 7 -veined, pubescent, acute. Fertile lemma elliptic, dorsally compressed, 3 mm long, 1.4 mm wide, indurate, shiny, without keel. Lemma margins involute. Lemma apex acute, pubescent. Palea involute, indurate.

Distribution (TDWG). Continent. North America.
Country/Province/State. South-central USA and Mexico. Texas. Northwest Mexico.

Panicum notatum Retz. Obs. iv. 18 (1786).

Images: G.G.Potgar, C.B.Salunkhe \& S.R.Yadav, Grasses of Maharashtra (2012)
(Pl. 24).
Derivation (Clifford \& Bostock 2007): L. noto, mark. Spikelets multi-colored.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Culms decumbent or rambling, 8-200 cm long, rooting from lower nodes. Culm-nodes glabrous. Lateral branches ample. Leaf-sheaths without keel, glabrous on surface or pubescent, outer margin hairy. Ligule a ciliolate membrane, $0.2-0.4 \mathrm{~mm}$ long. Collar glabrous. Leaf-blade base cordate. Leaf-blades lanceolate, $6-15 \mathrm{~cm}$ long, $10-27 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or puberulous or hirsute, sparsely hairy. Leaf-blade margins scabrous, ciliate.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $10-40 \mathrm{~cm}$ long. Primary panicle branches spreading. Panicle branches smooth or scabrous, glabrous in axils or bearded in axils. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, subacute or acute, $2.2-2.7 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Lower glume surface glabrous or pubescent. Lower glume apex obtuse. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5-7 -veined. Upper glume surface glabrous or pubescent. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5-7 -veined, acute. Fertile lemma elliptic, dorsally compressed, $1.7-2.1 \mathrm{~mm}$ long, indurate, dark brown, shiny, without keel. Lemma margins involute. Lemma apex obtuse or acute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1.6-1.9 mm long. Caryopsis with adherent pericarp, ellipsoid, 1.5-1.6 mm long.

Derivation (Clifford \& Bostock 2007): Gk. -oides, resembling. Similar to Olyra.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rhizomes short. Culms 50-100 cm long. Leafsheaths as wide as blade at the collar, glabrous on surface or pilose. Leaf-sheath auricles absent or erect. Ligule a ciliate membrane. Leaf-blades erect, $20-80 \mathrm{~cm}$ long, $2-10(-18) \mathrm{mm}$ wide, stiff. Leaf-blade surface glabrous or pilose. Leaf-blade apex attenuate, pungent.

Inflorescence. Inflorescence a panicle, deciduous as a whole. Peduncle fracturing. Panicle open, ovate or globose, effuse, $20-40 \mathrm{~cm}$ long. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, 15-40 mm long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate, dorsally compressed, rostrate, 6-7 mm long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes similar, exceeding apex of florets, thinner than fertile lemma. Lower glume ovate, 0.5 length of spikelet, membranous, without keels, 7 -veined. Lower glume apex acuminate. Upper glume ovate, 1 length of spikelet, membranous, without keels, 9 -veined. Upper glume apex acuminate.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 9 -veined, acuminate. Fertile lemma oblong, dorsally compressed, 4 mm long, indurate, pallid, shiny, without keel, more than 3-veined. Lemma surface pilose, hairy below, with clavate hairs. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. $2 n=36$ ( 1 ref TROPICOS).
Distribution (TDWG). Continent. South America.
Country /Province/State. Northern South America, Western South America, Brazil, Southern South America. French Guiana, Guyana, Surinam, Venezuela. Bolivia, Colombia. Brazil West Central, Brazil Northeast, Brazil Southeast, Brazil North, Brazil South. Paraguay.

Mato Grosso, Goias, Maranhao, Piaui, Minas Gerais, Rio de Janeiro, Espirito Santo, Sao Paulo Parana, Catarina, Rio Grande do Sul. Distrito Federal, Mato Grosso, Goiás, Mato Grosso do Sul. Paraíba. Pará, Tocantins. Minas Gerais, Sao Paulo. Paraná, Rio Grande do Sul, Santa Catarina. Corrientes, Misiones.

Panicum omega S.A. Renvoize. Kew Bull., 34(3): 551 (1980).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Tanzania. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Wingfield 512, 25 Dec 1969, Tanzania: Mbeya District, World's End View (K).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): final letter of Greek alphabet. From World's End View, Mbeya-Chunya, Tanzania.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths pilose, persistent and investing base of culm, with fibrous dead sheaths. Culms slender, $17-27 \mathrm{~cm}$ long. Leaves mostly basal. Leaf-sheaths as wide as blade at the collar, pilose, with simple hairs or clavellate hairs. Ligule a ciliolate membrane. Leaf-blades lanceolate, 3-7 cm long, 2-3 mm wide. Leaf-blade surface pilose, with tubercle-based hairs. Leaf-blade apex acute.

Inflorescence. Inflorescence a panicle. Panicle open, oblong or ovate, 2.5-3.5 cm long. Panicle branches glabrous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong, dorsally compressed, $1.5-2 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume oblong, $0.5-0.66$ length of spikelet, membranous, without keels, 3 -veined. Lower glume apex lobed. Upper glume oblong, 1 length of spikelet, membranous, purple, without keels, 5 -veined. Upper glume apex lobed.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, oblong, 1 length of spikelet, membranous, 7 -veined, pilose, hairy above (tip), lobed. Fertile lemma oblong, dorsally compressed, coriaceous, pallid, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, coriaceous.

Distribution (TDWG). Continent. Africa.
Country /Province /State. East Tropical Africa, South Tropical Africa. Tanzania.

Panicum paianum V.N. Naik \& B.W. Patunkar. Reinwardtia, 9(4): 407 (31 March] (1980).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online.
TYPE from India. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: India, Rajgarh (Rajasthan): Patunkar 2430 (MU holo, K).

Illustrations (Journals): Reinwardtia (9: 408, fig. 3 (1980)).
Derivation (Clifford \& Bostock 2007): L. -anum, indicating connection. In honor of Raghvendra Mukund Pai (1932-) Indian botanist.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms erect or geniculately ascending, $15-50 \mathrm{~cm}$ long, rooting from lower nodes. Leaf-sheaths glabrous on surface or puberulous, with tubercle-based hairs. Ligule a fringe of hairs, 1 mm long. Leaf-blades linear or lanceolate, $3-10 \mathrm{~cm}$ long, $5-9 \mathrm{~mm}$ wide. Leafblade surface glabrous or pubescent. Leaf-blade apex acute.

Inflorescence. Inflorescence a panicle. Panicle open, pyramidal, effuse, $6-15 \mathrm{~cm}$ long, $6-10 \mathrm{~cm}$ wide. Panicle branches capillary, scabrous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, tip oblique.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate, dorsally compressed, acute, 2.7-3.2 mm long, $1-1.2 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma, gaping. Lower glume oblate, clasping, 1 mm long, 0.33 length of spikelet, membranous, without keels, 5 -veined. Lower glume apex obtuse. Upper glume ovate, $2.5-3 \mathrm{~mm}$ long, 1 length of spikelet, membranous, without keels, 9-11-veined. Upper glume apex acute.

Florets. Basal sterile florets 1, male or barren, with palea. Lemma of lower sterile floret similar to upper glume, oblong, 1 length of spikelet, membranous, 7 -veined, acute. Fertile lemma oblong or ovate, dorsally compressed, $1.8-2 \mathrm{~mm}$ long, indurate, pruinose, without keel, $3-5$-veined, $0-3$-veined or more than 3 -veined. Lemma surface smooth. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Tropical Asia.
Country /Province/State. Indian Subcontinent. India.
Rajasthan.

Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online.
TYPE from Madagascar. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Madagascar, Andringitra: Perrier 13748.

Illustrations: None found.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms prostrate. Culm-internodes distally glabrous. Lateral branches ample. Leaf-sheaths loose, striately veined, glabrous on surface. Ligule an eciliate membrane, truncate. Leaf-blades spreading, lanceolate, $4.5-8 \mathrm{~cm}$ long, $4-5 \mathrm{~mm}$ wide. Leaf-blade venation with 6-8 secondary veins. Leaf-blade surface glabrous. Leaf-blade margins scaberulous. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, oblong, loose, $10-12 \mathrm{~cm}$ long. Primary panicle branches $3-5 \mathrm{~cm}$ long. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $1-5 \mathrm{~mm}$ long, glabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, obtuse, 2.5 mm long, falling entire.

Glumes. Glumes similar, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, clasping, 0.8 mm long, 0.33 length of spikelet, membranous, without keels, 5 -veined. Lower glume apex obtuse. Upper glume ovate, 2 mm long, 0.75 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface pubescent, hairy at apex. Upper glume apex truncate or obtuse.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, pubescent, hairy at apex, obtuse. Fertile lemma elliptic or oblong, dorsally compressed, 2 mm long or 4 mm long, indurate, pallid, shiny, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province /State. Western Indian Ocean. Madagascar.

Panicum palauense Ohwi. Bot. Mag., Tokyo, lv. 544 (1941).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, W.D.Clayton \& N.Snow, Key to Pacific Grasses (2010).

TYPE from Palau. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Palau, $R$. Kanehira \& S. Hatusima 4351.

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From Palau, Caroline Islands, Micronesia.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose, clumped densely. Culms erect, 30-40 cm long, $3-5$-noded. Culm-nodes pubescent. Leaf-sheaths mostly shorter than adjacent culm internode, hispid, with tubercle-based hairs. Ligule a fringe of hairs, 1 mm long. Leaf-blades $10-15 \mathrm{~cm}$ long, 2-4 mm wide. Leafblade surface smooth, pubescent or pilose, hairy on both sides. Leaf-blade apex attenuate.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, effuse, $10-15 \mathrm{~cm}$ long. Primary panicle branches spreading, bearing $4-6$ fertile spikelets on each lower branch. Panicle branches scaberulous, glabrous, glabrous in axils or pubescent in axils. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong or ovate, dorsally compressed, acuminate, 2 mm long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, clasping, 1 mm long, 0.5 length of spikelet, membranous, without keels, 3 -veined. Lower glume apex acute. Upper glume ovate, 2 mm long, 1 length of spikelet, membranous, without keels, $5-7$-veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 2 mm long, 1 length of spikelet, membranous, acute. Palea of lower sterile floret 0.5 length of lemma. Fertile lemma elliptic, dorsally compressed, 1.5 mm long, indurate, shiny, without keel. Lemma surface smooth. Lemma margins involute. Palea involute, indurate.

Distribution (TDWG). Continent. Pacific.
Country /Province /State. Northwestern Pacific. Caroline Is.

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. paucus, few; nodum, knot. Culms one- or two-noded.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual, caespitose. Culms erect or geniculately ascending, slender, $60-90 \mathrm{~cm}$ long. Ligule a ciliolate membrane. Leaf-blades flat or convolute, $5-10 \mathrm{~cm}$ long, 2-3 mm wide, flaccid. Leaf-blade margins scaberulous.

Inflorescence. Inflorescence a panicle. Panicle open, lanceolate, $15-30 \mathrm{~cm}$ long. Panicle branches glabrous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $6-12 \mathrm{~mm}$ long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, acuminate, $2.5-2.7 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma, gaping. Lower glume ovate, 0.66 length of spikelet, membranous, without keels, 3 -veined. Lower glume apex acuminate, mucronate. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex acuminate, awned, 1 -awned, awn $0.3-1 \mathrm{~mm}$ long.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, acute. Fertile lemma oblong, dorsally compressed, 1.5 mm long, indurate, pallid, shiny, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1.2 mm long.
Distribution (TDWG). Continent. Africa.
Country /Province /State. West Tropical Africa, West-Central Tropical Africa, Northeast Tropical Africa. Ghana, Guinea, Nigeria. Cameroon. Chad.

## Panicum pearsonii F.Bolus. Ann. Bolus Herb. i. 107 (1915).

Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Namibia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: T: Pearson 8518, Central Karasberg, Long Hill.

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): In honor of Henry Harold Walsh Pearson (1870-1916) English-born South African botanist.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths woolly. Culms erect or geniculately ascending, $25-50 \mathrm{~cm}$ long, 2-4 -noded. Culm-internodes terete, striate. Culm-nodes pubescent.

Leaf-sheaths 10 cm long, striately veined, smooth, glabrous on surface, outer margin hairy. Leaf-sheath oral hairs ciliate. Ligule a fringe of hairs. Leaf-blades $10-25 \mathrm{~cm}$ long, $7-9 \mathrm{~mm}$ wide, light green to midgreen. Leaf-blade surface smooth, glabrous. Leaf-blade apex attenuate.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $10-20 \mathrm{~cm}$ long, $6-12.5 \mathrm{~cm}$ wide, contracted about primary branches. Primary panicle branches 1 -nate, $5-12 \mathrm{~cm}$ long. Panicle branches flexuous, smooth or scaberulous, pubescent in axils. Spikelets solitary or in pairs. Fertile spikelets pedicelled. Pedicels present, filiform, 2 mm long, tip discoid.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong, dorsally compressed, acute, $3.1-3.5 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate or orbicular, clasping, 2 mm long, $0.5-0.66$ length of spikelet, membranous, without keels, 3 -veined. Lower glume apex acute or acuminate. Upper glume ovate, $3-3.5 \mathrm{~mm}$ long, 1 length of spikelet, membranous, without keels, 7 -veined. Upper glume lateral veins prominent. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, $3-3.5 \mathrm{~mm}$ long, 1 length of spikelet, membranous, 9 -veined, acute. Fertile lemma oblong, dorsally compressed, 3 mm long, indurate, pallid, shiny, without keel, 7 -veined, more than 3-veined. Lemma surface smooth. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 2 mm long.
Distribution (TDWG). Continent. Africa.
Country /Province /State. Southern Africa. Namibia.

## Panicum pectinellum Stapf. Prain, Fl. Trop. Afr. ix. 720 (1920).

Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online.
TYPE from DRC. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: South Central, Belgian Congo: Katanga; near Elisabethville, on dry wooded ground, Hombl? 54 (HT: K).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. pecten, comb; -ella, diminutive. The lemma bears a row of stiff hairs.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Rootstock evident. Butt sheaths pubescent. Culms erect, $20-60(-90) \mathrm{cm}$ long. Leaves cauline. Leaf-sheaths pubescent, with tubercle-based hairs or capitate hairs. Ligule a fringe of hairs. Leaf-blades $3-9 \mathrm{~cm}$ long, $2-6 \mathrm{~mm}$ wide. Leaf-blade apex acute.

Inflorescence. Inflorescence a panicle. Panicle open, elliptic or ovate, (3-)6-13 cm long. Panicle branches capillary, flexuous, pilose, with clavellate hairs. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, $1.5-2 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume oblong, $0.2-0.25$ length of spikelet, membranous, without keels, $0-3$-veined. Lower glume apex lobed, 3 -fid. Upper glume oblong, 0.5 length of spikelet, membranous, without keels, 5-7 -veined. Upper glume apex lobed, 5 -fid.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, oblong, 0.66-0.75 length of spikelet, membranous, 7 -veined, lobed, 5-7 -fid. Fertile lemma oblong, dorsally compressed, $1.5-2 \mathrm{~mm}$ long, chartaceous, pallid, shiny, without keel, more than 3veined. Lemma margins involute. Lemma apex obtuse, pubescent. Palea involute, chartaceous.

Distribution (TDWG). Continent. Africa.
Country /Province/State. West-Central Tropical Africa, South Tropical Africa. DRC. Angola, Malawi, Zambia.

Panicum pedersenii F.O. Zuloaga. Hickenia, 1(27): 148 (1978).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Argentina. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Pedersen 5868, 6 Mar 1961, Argentina: Corrientes: Dpto. Mburucuya: Estancia Santa Maria (BAA; IT: Herb. Pedersen).

Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 1, Aristidoideae a Pharoideae (2012) (358), F.O.Zuloaga et al, Flora del Paraguay 23 (1994) (273, Fig. 77).

Derivation (Clifford \& Bostock 2007): in honor of Troels Mundel Pedersen (1916-) Danish-born Argentinian botanist.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Rhizomes elongated, scaly, hairy. Culms 70-100 cm long. Culm-internodes $5.5-12 \mathrm{~cm}$ long. Culm-nodes glabrous. Leaf-sheaths $5-11 \mathrm{~cm}$ long, glabrous on surface or pilose, outer margin glabrous or hairy. Ligule a ciliate membrane, 1.7-2.4 mm long. Collar glabrous or pubescent. Leaf-blades lanceolate, $11-27 \mathrm{~cm}$ long, $4-7 \mathrm{~mm}$ wide. Leaf-blade midrib conspicuous. Leafblade surface pubescent, hairy adaxially. Leaf-blade margins scaberulous.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, effuse, $8-23 \mathrm{~cm}$ long, $4-15 \mathrm{~cm}$ wide. Panicle axis scabrous. Panicle branches glabrous in axils. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $1.5-7 \mathrm{~mm}$ long, scabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong, dorsally compressed, 3-4 mm long, 0.9-1.4 mm wide, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $1.3-1.7 \mathrm{~mm}$ long, 0.33 length of spikelet, membranous, without keels, 5-7 -veined. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, $9-11$-veined. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, $9-11$-veined, acute. Fertile lemma elliptic, dorsally compressed, $2.5-2.9 \mathrm{~mm}$ long, indurate, yellow, shiny, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers $1.8-2.3 \mathrm{~mm}$ long. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil, Southern South America. Brazil West Central, Brazil Northeast, Brazil Southeast, Brazil South. Paraguay.

Distrito Federal, Mato Grosso, Mato Grosso do Sul. Alagoas, Bahia. Minas Gerais, Rio de Janeiro, Sao Paulo. Paraná, Rio Grande do Sul, Santa Catarina. Corrientes.

Illustrations (Journals): Ann. Missouri Bot. Gard. (83: 266, Fig. 26 (1996)).
Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From Cerro-Pelado, Paraguay.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, 20-60 cm long. Culm-internodes $3.5-10.5 \mathrm{~cm}$ long, distally glabrous or pubescent. Culm-nodes purple, pubescent. Lateral branches lacking. Leaf-sheaths $3.5-8 \mathrm{~cm}$ long, glabrous on surface or pilose, with tubercle-based hairs, outer margin hairy. Ligule a ciliate membrane, $0.5-1.7 \mathrm{~mm}$ long. Collar pilose. Leaf-blades linear or lanceolate, $7-22 \mathrm{~cm}$ long,

2-4 mm wide. Leaf-blade surface pilose, densely hairy, hairy adaxially or on both sides, with tuberclebased hairs. Leaf-blade margins cartilaginous, scaberulous, tuberculate-ciliate.

Inflorescence. Inflorescence a panicle. Peduncle $23-27 \mathrm{~cm}$ long. Panicle open, ovate, $7-18 \mathrm{~cm}$ long, $3-13 \mathrm{~cm}$ wide. Panicle axis scabrous, with scattered hairs or glabrous. Panicle branches scabrous, glabrous or pilose, glabrous in axils. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, clavate, 2-10 mm long, scabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, acuminate, $2.7-3.3 \mathrm{~mm}$ long, $1-1.2 \mathrm{~mm}$ wide, falling entire, readily shedding glumes (upper glume).

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $1.7-2.1 \mathrm{~mm}$ long, 0.5-0.75 length of spikelet, membranous, without keels, 5-7 -veined. Lower glume primary vein scaberulous. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 7-9 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 7-9-veined, acute. Palea of lower sterile floret 1 length of lemma. Fertile lemma elliptic, dorsally compressed, $1.9-2 \mathrm{~mm}$ long, indurate, black, shiny, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp, 1.2-1.3 mm long. Embryo 0.33 length of caryopsis. Hilum punctiform.

Distribution (TDWG). Continent. South America.
Country /Province /State. Western South America, Brazil, Southern South America. Bolivia. Brazil West Central, Brazil Southeast, Brazil North, Brazil South. Argentina Northwest, Paraguay, Uruguay.

Mato Grosso, Minas Gerais, Rio de Janeiro, Espirito Santo, Sao Paulo Parana, Catarina, Rio Grande do Sul. Distrito Federal, Mato Grosso. Paraná. Jujuy. Cordoba, Corrientes, Misiones.

Panicum pellitum Trin. Gram. Panic. 198 (1826).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), W.D.Clayton \& N.Snow, Key to Pacific Grasses (2010).

Panicum philadelphicum Bernh. ex Trin. Gram. Panic. 216 (1826).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from USA. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: J.J. Bernhardi s.n., no date, USA: Pennsylvania: Philadelphia Co. (LE; IT: US-80910 (fragm. ex C)).

Recent Synonyms: Panicum gattingeri Nash, Small, Fl. S.E. U.S. 92. (1903). Panicum lithophilum Swallen, Proc. Biol. Soc. Wash.54: 43 (1941).

Panicum tuckermanii.
Illustrations (Books): M.E.Barkworth et al, Flora of North America north of Mexico Vol 25 Poaceae, part 2 (2003) (461 as subspecies philadelphicum \& lithophilum \& gattingeri).

Derivation (Clifford \& Bostock 2007): L. -icum, belonging to. From Philadelphia but not necessarily indigenous to that place, in that the specimens may have derived from a herbarium in that city.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual, caespitose. Culms erect, slender, 20-50(-60) cm long. Culminternodes distally hirsute or hispid. Leaf-sheaths hispid, with tubercle-based hairs. Ligule a fringe of hairs, $0.5-1.5 \mathrm{~mm}$ long. Leaf-blades $5-15 \mathrm{~cm}$ long, $2-7 \mathrm{~mm}$ wide, light green. Leaf-blade surface glabrous to hispid, hairy on both sides. Leaf-blade margins tuberculate-ciliate.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $7-15 \mathrm{~cm}$ long, $0.25-0.33$ of culm length, with spikelets clustered towards branch tips. Primary panicle branches ascending or spreading, 1 -nate. Panicle axis glabrous or pubescent. Panicle branches stiff, bearded in axils. Spikelets appressed, in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, acute, 1.2-2(-2.2) mm long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.33 length of spikelet, membranous, without keels, 5 -veined. Lower glume apex acute. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5 -veined, acute. Fertile lemma elliptic, dorsally compressed, 1.3-1.7 mm long, indurate, shiny, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Distribution (TDWG). Continent. North America.
Country /Province/State. Eastern Canada, North-central USA, Northeast USA, South-central USA, Southeastern USA. New Brunswick, Ontario, Quebec. Illinois, Iowa, Kansas, Minnesota, Missouri, Nebraska, Oklahoma, Wisconsin. Connecticut, Indiana, Maine, Massachusetts, Michigan, Ohio, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont, West Virginia. Texas.

Panicum phippsii S.A. Renvoize. Kew Bull., 44(3): 546 (1989).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online.
TYPE from Zambia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Zambia: Mporokoso Distr.: Mweru-Wantipa, 16 Apr 1961, Phipps \& Vesey-FitzGerald 3238 (HT: SRGH; IT: K).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): in honor of J.B. Phipps (fl. 1967) Canadian botanist.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms geniculately ascending or decumbent, 30-50 cm long, rooting from lower nodes. Ligule a ciliate membrane. Leaf-blades lanceolate, $3.5-6 \mathrm{~cm}$ long, $5-10 \mathrm{~mm}$ wide, membranous. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, 6-10 cm long. Panicle branches capillary, flexuous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate, dorsally compressed, 3 mm long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.15 length of spikelet, membranous, without keels, 0 -veined. Lower glume lateral veins absent. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface pilose. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, acute. Fertile lemma oblong, dorsally compressed, 2.5 mm long, indurate, dark brown, shiny, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province/State. South Tropical Africa. Zambia.

Panicum phoiniclados V.N. Naik \& B.W. Patunkar. Reinwardtia, 9(4): 403 (1980).

TYPE from India. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: India, Marathwada: Patunkar 2468a (MU holo, K.

Illustrations (Books): G.G.Potgar, C.B.Salunkhe \& S.R.Yadav, Grasses of Maharashtra (2012) (Fig. 156).

Illustrations (Journals): Reinwardtia (9: 404, fig. 1 (1980)).
Images: G.G.Potgar, C.B.Salunkhe \& S.R.Yadav, Grasses of Maharashtra (2012)
(Pl. 24).
Derivation (Clifford \& Bostock 2007): Gk. phoinix, purple-red; klados, stem. Culms and sheaths purple in color.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose, clumped densely. Rhizomes short. Culms erect, $60-120 \mathrm{~cm}$ long, woody. Culm-nodes glabrous. Lateral branches ample, arising from mid culm or upper culm. Leaf-sheaths without keel, glabrous on surface. Ligule a ciliate membrane, $0.6-0.9 \mathrm{~mm}$ long. Collar glabrous. Leaf-blades erect or ascending or spreading, $10-40 \mathrm{~cm}$ long, $3-8 \mathrm{~mm}$ wide. Leaf-blade surface glabrous. Leaf-blade margins scaberulous.

Inflorescence. Inflorescence a panicle. Panicle contracted, linear, $5-28 \mathrm{~cm}$ long. Primary panicle branches appressed. Panicle branches scabrous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate or elliptic, dorsally compressed, acuminate, $2.4-2.8 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.6-1 \mathrm{~mm}$ long, 0.4 length of spikelet, membranous, without keels, 1 -veined. Lower glume lateral veins absent. Lower glume apex cuspidate. Upper glume ovate, 1 length of spikelet, membranous, without keels, 7-9 veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 7-9-veined, acute. Palea of lower sterile floret 1 length of lemma. Fertile lemma elliptic, dorsally compressed, 1.7-1.9 mm long, indurate, dark brown, shiny, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1.2-1.4 mm long. Caryopsis with adherent pericarp, 1.1 mm long. Distribution (TDWG). Continent. Tropical Asia.
Country /Province /State. Indian Subcontinent. India, Sri Lanka.

Derivation (Clifford \& Bostock 2007): Gk. -oides, resembling. Similar to Phragmites in habit.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rhizomes short. Culms robust, (100-)120-180 cm long. Lateral branches lacking. Leaf-sheaths glabrous on surface. Ligule a ciliate membrane. Leafblades tapering towards sheath, $50-75 \mathrm{~cm}$ long, $5-15(-20) \mathrm{mm}$ wide. Leaf-blade surface glabrous or pilose. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, oblong or ovate, $30-60 \mathrm{~cm}$ long. Primary panicle branches 15-25 in number, 3-5 -nate. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, (2.8-)3-4(-4.2) mm long, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma, gaping. Lower glume ovate, $0.5-0.66$ length of spikelet, membranous, without keels, 5 -veined. Lower glume apex acuminate. Upper glume ovate, 1 length of spikelet, membranous, pallid or purple, without keels, 7 -veined. Upper glume apex acuminate.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, (7-)9 -veined, acuminate. Fertile lemma oblong, dorsally compressed, 2.8-4.2 mm long, indurate, pallid, shiny, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province /State. West Tropical Africa, West-Central Tropical Africa, Northeast Tropical Africa, East Tropical Africa, South Tropical Africa, Southern Africa. Burkina, Ghana, Guinea, Ivory Coast, Nigeria, Togo. Cameroon, Congo, Gabon, DRC. Chad. Tanzania. Angola, Malawi, Mozambique, Zambia, Zimbabwe.

TYPE from Nigeria. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: C. Barter 1377, Nigeria (B; IT: K, US-80915 (fragm.)).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): in honor of Robert Knuds Friedrich Pilger (1876-1953) German agrostologist, born on Helgoland before its transfer from British to German administration.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, slender, 30-120 cm long, 1.5 mm diam. Culm-internodes distally hirsute. Leaf-sheaths hirsute. Ligule a ciliolate membrane, 1 mm long. Leaf-blades $20-40 \mathrm{~cm}$ long, $2-4 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or hirsute. Leaf-blade apex attenuate.

Inflorescence. Inflorescence a panicle. Panicle open or contracted, oblong, dense, 10-27 cm long. Primary panicle branches $2-3$-nate, subdividing 4(-5) times. Panicle branches pilose. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, ciliate.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, acuminate, $2-3 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma, gaping. Lower glume ovate, 0.5-1 length of spikelet, membranous, without keels, 3-5 -veined. Lower glume apex acuminate, muticous or mucronate or awned, 1 -awned, awn $0-1 \mathrm{~mm}$ long. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5-7 -veined. Upper glume apex acuminate, muticous or mucronate or awned, 1 -awned, awn 0-1 mm long.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, acuminate. Fertile lemma oblong, dorsally compressed, 1.5 mm long, indurate, pallid, shiny, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3, 2 mm long.
Distribution (TDWG). Continent. Africa.
Country /Province /State. West Tropical Africa, West-Central Tropical Africa, Northeast Tropical Africa, South Tropical Africa. Burkina, Ghana, Guinea, Ivory Coast, Nigeria, Sierre Leone. Chad. Mozambique.

. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: IT: M.K. Dinter 3395, 25 1914, Namibia: Damaraland (US-766249 (fragm. ex B)).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. -ana, indicating connection. In honor of Robert Knuds Friedrich Pilger (1876-1953) German agrostologist, born on Helgoland before its transfer from British to German administration.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms erect, $30-200 \mathrm{~cm}$ long, spongy. Ligule a ciliate membrane. Leaf-blades $10-30 \mathrm{~cm}$ long, $5-12 \mathrm{~mm}$ wide. Leaf-blade apex acute.

Inflorescence. Inflorescence a panicle. Panicle open, linear or oblong, $6-36 \mathrm{~cm}$ long, contracted about primary branches. Primary panicle branches appressed or ascending. Spikelets appressed, solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate, dorsally compressed, acuminate, 4-5.5 mm long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume oblate, $0.15-0.2$ length of spikelet, membranous, without keels, $0-3$-veined. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 7-9-veined. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5-7 -veined, acute. Fertile lemma oblong, dorsally compressed, $3.5-5 \mathrm{~mm}$ long, indurate, pallid, without keel, more than 3-veined. Lemma margins involute. Lemma apex apiculate. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province /State. Southern Africa. Namibia, Botswana.

Panicum pinifolium Chiov. Ann. Bot., Roma, v. 62 (1906).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Somalia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Somalia, Brava to Zanzibar: Riva 1909-1869 (FI holo).

Illustrations (Books): T.A.Cope, in M.Thulin, Poaceae (Gramineae). Flora of Somalia (1995) (222, Fig 126).

Derivation (Clifford \& Bostock 2007): L. folium, leaf. The leaf-blades resemble those of Pinus.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths papery, glossy. Culms erect, (30-)60-230 cm long. Culm-internodes shorter and closely spaced at top of culm. Lateral branches ample. Leaves distichous. Leaf-sheaths longer than adjacent culm internode. Ligule a ciliate membrane. Leafblades aciculate or linear, parallel-sided, flat or involute, $1-8 \mathrm{~cm}$ long, $2-6 \mathrm{~mm}$ wide, stiff. Leaf-blade surface glabrous. Leaf-blade apex pungent.

Inflorescence. Inflorescence a panicle, embraced at base by subtending leaf. Panicle open, ovate, 1-2 cm long. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets orbicular, dorsally compressed, $1.8-2 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.5 length of spikelet, membranous, without keels, $0-1$-veined. Lower glume lateral veins absent. Lower
glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex cuspidate.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, cuspidate. Fertile lemma oblong, dorsally compressed, 1.5 mm long, indurate, pallid, shiny, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province /State. Northeast Tropical Africa, East Tropical Africa. Somalia. Kenya, Tanzania.

Panicum pleianthum Peter. Fedde, Repert. Beih. xl. 1. 198: Anhang, 47 (1930).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online.
TYPE from Tanzania. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Peter 20738, Tanzania: Lushoto District, Maramba (B).

Illustrations (Books): G.V.Pope et al., Flora Zambesiaca 10 (3(1989):36, t. 7).
Derivation (Clifford \& Bostock 2007): Gk. pleios, several; anthos, flower. Panicle much branched and so bearing many spikelets.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual or perennial, short-lived. Culms decumbent, 20-60 cm long. Leaves distichous. Leaf-sheaths outer margin hairy. Ligule a ciliate membrane. Leaf-blade base asymmetrical. Leaf-blades lanceolate, tapering towards sheath, $5-10 \mathrm{~cm}$ long, $6-10 \mathrm{~mm}$ wide. Leaf-blade surface pilose. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, oblong or obovate, dense, 4-10 cm long. Primary panicle branches profusely divided. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, gibbous, $1.7-2.2 \mathrm{~mm}$ long, falling entire. Rhachilla internodes elongated between glumes.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.5 length of spikelet, membranous, without keels, 3-5 -veined. Lower glume surface glabrous or pilose. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface glabrous or pilose. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, glabrous or pilose, acute. Fertile lemma oblong, dorsally compressed, $1.5-2 \mathrm{~mm}$ long, indurate, pallid or dark brown, shiny, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province/State. East Tropical Africa, South Tropical Africa, Western Indian Ocean. Kenya, Tanzania. Mozambique. Madagascar.

TYPE from Mexico. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: O.B. Metcalfe 739, 18 Sep 1903, USA: New Mexico: Grant Co.: at Mangas Springs: 18 miles NW of Silver City (US-495701; IT: MO-1837660).

Illustrations (Books): M.E.Barkworth et al, Flora of North America north of Mexico Vol 25 Poaceae, part 2 (2003) (483).

Derivation (Clifford \& Bostock 2007): L. plenus, bulky. Culms tall and densely tufted.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rootstock evident. Culms erect, robust, 100200 cm long. Culm-internodes elliptical in section, distally glabrous. Lateral branches lacking or sparse, arising from lower culm. Leaf-sheaths keeled, glabrous on surface or pubescent. Ligule a fringe of hairs, 2
mm long. Leaf-blades erect or ascending or spreading, $20-35 \mathrm{~cm}$ long, $7-17 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pilose, sparsely hairy.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $20-50 \mathrm{~cm}$ long. Primary panicle branches spreading. Panicle axis smooth. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or oblong, dorsally compressed, 3-3.4 mm long, 0.8 mm wide, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, clasping, 0.5 length of spikelet, membranous, without keels, 3 -veined. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume lateral veins prominent. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, prominently veined, acute. Fertile lemma elliptic, dorsally compressed, $2-3 \mathrm{~mm}$ long, 1 mm wide, indurate, without keel. Lemma surface rugulose. Lemma margins involute. Lemma apex acute, pubescent. Palea involute, indurate.

Distribution (TDWG). Continent. North America.
Country /Province/State. Southwestern USA, South-central USA, and Mexico. Arizona. Texas. Central Mexico, Northeast Mexico, Gulf (Mexico), Northwest Mexico, Southwest Mexico.

Morelos. Chihuahua, Durango. Veracruz. Sonora. Guerrero.

TYPE from Ethiopia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: G.H.W. Schimper U. i. 1842 Sect. 2 1230, 18 Sep 1842, Ethiopia: prope Gafta (P; IT: L, U, US-1061571 (ex B in 1914), US-1445697, US-945573).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): Gk. porphyra, purple dye; rhiza, root. Lower nodes brownpurple.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual or perennial, short-lived. Culms erect, $50-200 \mathrm{~cm}$ long, 2-4 mm diam. Culm-nodes pallid or brown, glabrous. Ligule a ciliate membrane. Leaf-blades parallel-sided, $15-30 \mathrm{~cm}$ long, $5-10 \mathrm{~mm}$ wide. Leaf-blade surface glabrous. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, oblong or ovate, (20-)30-50 cm long, with spikelets clustered towards branch tips. Primary panicle branches spreading. Spikelets appressed, solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, cuspidate or acuminate, $3.5(-4) \mathrm{mm}$ long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume oblate, $0.25-0.33$ length of spikelet, membranous, without keels, 1-3 -veined. Lower glume apex acute or
acuminate. Upper glume ovate, 1 length of spikelet, membranous, without keels, 7-9 -veined. Upper glume apex acuminate.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 7-9 -veined, acuminate. Fertile lemma oblong, dorsally compressed, 3 mm long, indurate, pallid, shiny, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province /State. West Tropical Africa, West-Central Tropical Africa, Northeast Tropical Africa, East Tropical Africa, South Tropical Africa, Southern Africa. Ghana, Senegal, Niger. Ethiopia (inc. Eritrea), Sudan. Kenya, Tanzania, Uganda. Malawi, Mozambique, Zambia, Zimbabwe. Botswana.

TYPE from Zambia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Zambia: Mwinilunga, Kaomba River, 15 Dec 1937, Milne-Redhead 3680 (HT: K).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): Gk. pseudos, false; racemus, stalk of a bunch of grapes; -osum, abundance. Primary inflorescence axes raceme-like.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms erect, 30-70 cm long. Ligule a ciliate membrane. Leaf-blade base amplexicaul. Leaf-blades ovate, $3-6 \mathrm{~cm}$ long, $8-17 \mathrm{~mm}$ wide. Leaf-blade surface pilose. Leaf-blade apex acute.

Inflorescence. Inflorescence a panicle. Panicle open, oblong or ovate, $6-10 \mathrm{~cm}$ long. Primary panicle branches ascending, simple. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, gibbous, $1.5-2 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 1 length of spikelet, membranous, without keels, 3 -veined. Lower glume surface pilose. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface pilose. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, acute. Fertile lemma oblong, dorsally compressed, 11.5 mm long, indurate, pallid, without keel, more than 3-veined. Lemma surface papillose. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate. Palea surface papillose.

Distribution (TDWG). Continent. Africa.
Country /Province/State. South Tropical Africa. Zambia.

(Pl. 24).
Derivation (Clifford \& Bostock 2007): Gk. psilos, bare; pous, foot. Pedicels glabrous.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual, caespitose. Culms erect or geniculately ascending, 14-120 cm long, spongy or firm. Culm-nodes glabrous. Lateral branches sparse or fastigiate. Ligule an eciliate membrane, truncate. Leaf-blade base cordate. Leaf-blades linear or lanceolate, $5-45 \mathrm{~cm}$ long, $5-12 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or hispid, with tubercle-based hairs. Leaf-blade apex abruptly acute or acute.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, effuse, $5-33 \mathrm{~cm}$ long. Primary panicle branches spreading, whorled at lower nodes, $2-6 \mathrm{~cm}$ long. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $1-6 \mathrm{~mm}$ long, scaberulous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or oblong, dorsally compressed, subacute, $2.3-3 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.33-0.5 length of spikelet, membranous, without keels, $5-7(-9)$-veined. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 11 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 9 -veined, acute. Palea of lower sterile floret 1 length of lemma. Fertile lemma ovate, dorsally compressed, 2 mm long, indurate, pallid, shiny, without keel, $7-9$-veined, more than 3-veined. Lemma margins involute. Lemma apex apiculate. Palea involute, indurate.

Flower and Fruit. Anthers $3,1 \mathrm{~mm}$ long. Caryopsis with adherent pericarp, ovoid or orbicular, 1.5 mm long.

Distribution (TDWG). Continent. Temperate Asia, Tropical Asia.

Country /Province /State. China, Eastern Asia. China South Central, Tibet. Japan, Taiwan. Indian Subcontinent, Indo-China, Malesia. Eastern Himalaya, India, Pakistan, Sri Lanka. Myanmar, Thailand. Java, Philippines.

Guizhou, Yunnan. Darjeeling, Bhutan.

Illustrations (Books): S.Phillips, Poaceae (Gramineae) in I.Hedberg \& S.Edwards, Flora of Ethiopia and Eritrea (1995) (205, Fig 85).

Derivation (Clifford \& Bostock 2007): L. very small. Plants of small stature.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms decumbent, weak, (1.5-)5-40 cm long, rooting from lower nodes. Ligule a ciliate membrane. Leaf-blades lanceolate, tapering towards sheath or parallel-sided, $0.6-4(-4.5) \mathrm{cm}$ long, $1.5-6 \mathrm{~mm}$ wide, membranous. Leaf-blade venation without cross veins. Leaf-blade surface pilose. Leaf-blade apex acute or acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $1-2(-5) \mathrm{cm}$ long. Primary panicle branches spreading or reflexed. Panicle branches pilose. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, acute, $1.5-2 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.5-$ 0.66 length of spikelet, membranous, without keels, 3 -veined. Lower glume surface glabrous or pilose, with tubercle-based hairs. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5-7 -veined. Upper glume surface glabrous or pilose, with tubercle-based hairs. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, glabrous or pilose, with tubercle-based hairs, acute. Fertile lemma oblong, dorsally compressed, $1.5-2 \mathrm{~mm}$ long, indurate, pallid, shiny, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. $2 n=18$ ( 1 ref TROPICOS).
Distribution (TDWG). Continent. Africa.
Country /Province /State. West Tropical Africa, West-Central Tropical Africa, Northeast Tropical Africa, East Tropical Africa, South Tropical Africa. Nigeria, Sierre Leone. Cameroon, Rwanda, DRC. Ethiopia (inc. Eritrea), Sudan. Kenya, Tanzania, Uganda. Malawi.

Panicum pycnoclados Tutin. Journ. Bot. 1xxii. 340. (1934).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online.
TYPE from Guyana. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: T.G. Tutin 508, 20 Aug 1933, Guyana: Kaiteur savanna: Potaro River (BM; IT: K, US-1760654, US2954373). Tutin 651 is marked as the type at BM; Tutin 508 was published as the type.

Illustrations (Books): S.A.Renvoize, The Grasses of Bahia, 1984 (158, Fig. 57).
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Culms leaning, 12-60 cm long, rooting from lower nodes. Culm-internodes terete, $3-15 \mathrm{~cm}$ long, distally glabrous or hirsute. Culm-nodes constricted, pubescent. Lateral branches ample, arising from upper culm. Leaf-sheaths $2-5 \mathrm{~cm}$ long, glabrous on surface or hirsute, outer margin hairy. Ligule a ciliate membrane, $1-1.5 \mathrm{~mm}$ long. Collar pubescent. Leaf-blade base amplexicaul, asymmetrical. Leaf-blades lanceolate or oblong, $2-4.5 \mathrm{~cm}$ long, $5-18 \mathrm{~mm}$ wide. Leaf-blade surface glabrous to pilose, sparsely hairy or moderately hairy or densely hairy. Leaf-blade margins scabrous, ciliate, hairy at base. Leaf-blade apex acute.

Inflorescence. Inflorescence a panicle. Peduncle 6-20 cm long, glabrous or pubescent above. Panicle open, ovate, $3-6 \mathrm{~cm}$ long, $1.5-6 \mathrm{~cm}$ wide. Primary panicle branches not whorled or whorled at lower nodes. Panicle axis eglandular, smooth or tuberculate, glabrous or pilose. Panicle branches flexuous, eglandular, glabrous in axils or pubescent in axils. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, glabrous or ciliate, hairy above.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, $2.2-3 \mathrm{~mm}$ long, $0.8-$ 0.9 mm wide, falling entire. Rhachilla internodes elongated between glumes.

Glumes. Glumes similar, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, clasping, $1.2-1.8 \mathrm{~mm}$ long, $0.5-0.75$ length of spikelet, membranous, without keels, 3(-5) -veined. Lower glume apex acuminate. Upper glume elliptic, $1.9-2.7 \mathrm{~mm}$ long, 0.9 length of spikelet, membranous, without keels, 9 -veined. Upper glume surface glabrous or pilose. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 7-9 -veined, glabrous or pilose, acute. Palea of lower sterile floret $1.5-1.8 \mathrm{~mm}$ long, 1 length of lemma. Fertile lemma elliptic, dorsally compressed, $1.8-2 \mathrm{~mm}$ long, 0.8 mm wide, indurate, without keel. Lemma surface scaberulous, rough above. Lemma margins involute. Lemma apex acute, laterally pinched (slightly). Palea involute, indurate.

Flower and Fruit. Anthers $3,0.8 \mathrm{~mm}$ long. Caryopsis with adherent pericarp, ellipsoid, 1.5 mm long. Embryo 0.33 length of caryopsis. Hilum punctiform.

Distribution (TDWG). Continent. South America.
Country /Province/State. Northern South America and Brazil. Brazil Northeast.
Bahia.

Panicum pygmaeum R. Br. Prod. 191. (1810).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), D.Sharp, D. \& B.K.Simon, AusGrass (2002).

TYPE from Australia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: IT: R. Brown s.n., 1803-1805, Australia: New South Wales (US-2830923 (fragm.)).

Images: K.Domin, Bibliotheca Botanica 85 (1915) (311, fig.69).
Derivation (Clifford \& Bostock 2007): L. dwarf. Culms shorter than those of many other species in the genus.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Culms decumbent, weak, $15-20 \mathrm{~cm}$ long, $4-5$-noded, rooting from lower nodes. Culm-nodes glabrous or pubescent. Leaf-sheaths tight, longer than adjacent culm internode, pilose, with tubercle-based hairs, outer margin hairy. Ligule a fringe of hairs, 0.5 mm long. Leafblade base broadly rounded, without a false petiole or with a brief petiole-like connection to sheath. Leafblades spreading, linear or lanceolate, $1-4 \mathrm{~cm}$ long, $1-6 \mathrm{~mm}$ wide, membranous. Leaf-blade midrib indistinct. Leaf-blade surface pilose, hairy on both sides, with tubercle-based hairs. Leaf-blade margins tuberculate-ciliate. Leaf-blade apex acute or acuminate.

Inflorescence. Inflorescence a panicle, embraced at base by subtending leaf. Panicle open, ovate, 2-6 cm long. Primary panicle branches spreading, simple. Panicle branches capillary, flexuous, smooth or scabrous, with scattered hairs, with tubercle-based hairs. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $1-2 \mathrm{~mm}$ long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate or ovate, dorsally compressed, compressed slightly, acute, $2-2.3 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.25 length of spikelet, membranous, without keels, 0 -veined. Lower glume lateral veins absent. Lower glume apex truncate or obtuse. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface smooth or asperulous, rough above. Upper glume apex acute.

[^0]Panicum quadriglume (Doell) Hitchcock. Contrib. U. S. Nat. Herb. xxiv. 460 (1927).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. Basionym or Replaced Name: Panicum cayennense var. quadriglume Döll, Fl. Bras. 2(2): 220 (1877). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Regnell III 1406, 18 Mar 1847, Brazil: Minas Gerais: Caldas (W; IT: P, US-742411, US-80560 (fragm. ex BR)).

Illustrations (Journals): Ann. Missouri Bot. Gard. (83: 269, Fig. 27 (1996)), Ruizia (13:321, Fig 39cd (1993)).

Derivation (Clifford \& Bostock 2007): L. quatuor, four; gluma, husk. Spikelets with two sterile lemmas in addition to the two glumes.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms 40-120 cm long. Leaf-sheaths glabrous on surface or pilose. Ligule a fringe of hairs. Leaf-blades $10-40 \mathrm{~cm}$ long, $4-10 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pilose.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, 7-20 cm long. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, filiform.

Fertile Spikelets. Spikelets comprising 2 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-manyflowered - if two-flowered then both fertile or the upper sterile. Spikelets ovate, dorsally compressed, acute, 3-4 mm long, falling entire.

Glumes. Glumes dissimilar, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, 0.33-0.5 length of spikelet, membranous, without keels, 5 -veined. Lower glume apex acute. Upper glume ovate, 0.8-0.9 length of spikelet, membranous, without keels, 7 -veined. Upper glume apex acute.

Florets. Basal sterile florets 2 or more, similar, barren (lower) or barren (upper), without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 veined, acute. Fertile lemma oblong, dorsally compressed, $1.5-2 \mathrm{~mm}$ long, indurate, dark brown, shiny, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. South America.

Images: D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002);. Derivation (Clifford \& Bostock 2007): L. -ica, belonging to. From Queensland, Australia.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rootstock evident. Butt sheaths villous. Culms $30-70 \mathrm{~cm}$ long, 3 -noded. Culm-internodes scaberulous. Culm-nodes glabrous. Leaf-sheaths striately veined, glabrous on surface. Ligule a fringe of hairs, 1 mm long. Leaf-blades convolute, $10-25 \mathrm{~cm}$ long, $1-$ 2.5 mm wide, firm. Leaf-blade surface glabrous or pilose, sparsely hairy. Leaf-blade apex attenuate.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $10-25 \mathrm{~cm}$ long, with spikelets clustered towards branch tips. Primary panicle branches spreading, whorled at lower nodes, branching divaricately, $10-23 \mathrm{~cm}$ long. Panicle branches stiff, with prominent pulvini. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $0.5-10 \mathrm{~mm}$ long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate, dorsally compressed, acuminate, 3-7 mm long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume lanceolate or ovate, $0.75-0.85$ length of spikelet, membranous, without keels, 5 -veined. Lower glume lateral veins transversely connected at apex. Lower glume apex acuminate. Upper glume ovate, 1 length of spikelet, membranous, without keels, 7 -veined. Upper glume apex acuminate.

Florets. Basal sterile florets 1, barren, with palea or without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 7 -veined, acute. Palea of lower sterile floret 0.33 length of lemma. Fertile lemma oblong, dorsally compressed, 5-6 mm long, indurate, shiny, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.

Klein Flora Illustrada Catarinensis Gramineas (1981-1982) (675, Fig. 143 \& 688, Fig. 146), A.Burkat, Flora Ilustrada de Entre Rios (Argentina), Pt II, Gramineas (1969) (281, Fig.107), A.L.Cabrera, Flora de la Provincia de Buenos Aires, IV Pt 2 Gramineas (1970) (545, Fig. 143), M.N.Correa, Flora Patagonica Parte III, Gramineae (1978) (533, Fig. 359), B.Rosengurtt, Gramineas UruguayasI (1970) (325, Fig. 138).

Illustrations (Journals): Darwiniana (22: 25, Fig.61-n (1979)).
Derivation (Clifford \& Bostock 2007): L. racemus, stalk of a cluster of grapes; -osa, abundance. The spikelets are borne in racemes or contracted panicles.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Cataphylls evident. Rhizomes elongated. Culms $45-55 \mathrm{~cm}$ long, $1.4-3 \mathrm{~mm}$ diam. Culm-nodes brown, bearded. Leaf-sheaths hispid, with reflexed hairs. Ligule a fringe of hairs, $1.5-2.5 \mathrm{~mm}$ long. Leaf-blades aciculate, convolute, $23-43 \mathrm{~cm}$ long, $0.6-3.5 \mathrm{~mm}$ wide.

Inflorescence. Inflorescence a panicle. Panicle contracted, linear, $10.5-25 \mathrm{~cm}$ long, contracted about primary branches. Primary panicle branches appressed, simple, bearing spikelets almost to the base. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, $5-8 \mathrm{~mm}$ long, $3-5 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume obovate, $0.66-0.75$ length of spikelet, membranous, without keels, 5 -veined. Lower glume surface villous. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 9 -veined. Upper glume surface villous. Upper glume apex obtuse.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 9 -veined, villous, obtuse. Fertile lemma oblong, dorsally compressed, $5-8 \mathrm{~mm}$ long, indurate, pallid, without keel, more than 3-veined. Lemma margins involute, pilose, hairy below. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Australasia, South America.
Country /Province /State. Australia. New South Wales, Victoria. Brazil, Southern South America. Brazil Northeast, Brazil Southeast, Brazil South. Argentina Northeast, Chile Central, Chile South, Uruguay.

Coast. Bahia, Minas Gerais, Rio de Janeiro, Espirito Santo, Catarina, Rio Grande do Sul. Bahia, Ceará, Pernambuco. Espirito Santo, Rio de Janeiro, Sao Paulo. Rio Grande do Sul, Santa Catarina. Buenos Aires, Entre Rios. Rest of Chile- Biobio, La Auracania, Maule, O'Higgins, Santado, Valpariso. Biobio, La Araucania. Los Lagos.

Illustrations (Books): W.L.Wagner et al., Manual of the Flowering Plants of Hawai'i, Vol. 2 (1990) (1572, Pl. 233).

Derivation (Clifford \& Bostock 2007): L. ramus, branch; -osa, abundance. Inflorescences or culms much branched.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms 25-120 cm long. Culm-internodes distally glabrous or pubescent. Culm-nodes bearded. Lateral branches ample. Leaf-sheaths glabrous on surface. Ligule a fringe of hairs, $1-2 \mathrm{~mm}$ long. Leaf-blades $4-10 \mathrm{~cm}$ long, $2-5 \mathrm{~mm}$ wide. Leaf-blade surface smooth or scaberulous, glabrous or hirsute, hairy adaxially.

Inflorescence. Inflorescence a panicle, terminal and axillary. Panicle open, linear, $5-15 \mathrm{~cm}$ long. Primary panicle branches appressed. Panicle axis scabrous, villous. Panicle branches scabrous, glabrous or pubescent. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, acuminate, 3-4.5 mm long, falling entire. Rhachilla internodes elongated between glumes. Rhachilla elongation 0.3 mm long.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 1 length of spikelet, membranous, without keels, 3-5 -veined. Lower glume surface villous, hairy below or between veins. Lower glume hairs $1-2 \mathrm{~mm}$ long. Lower glume apex acute. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 3-5 -veined. Upper glume surface villous, hairy below or between veins. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, $2.5-2.7 \mathrm{~mm}$ long, $0.6-0.8$ length of spikelet, membranous, 7 -veined, pubescent, hairy above, acute. Fertile lemma elliptic or oblong, dorsally compressed, $1.8-2 \mathrm{~mm}$ long, indurate, shiny, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 0.8-1.1 mm long, pallid. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Pacific.

## Country /Province/State. North-central Pacific. Hawaii.

(Pl. 24).
Derivation (Clifford \& Bostock 2007): L. repo, crawl. Rhizome well developed.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Rhizomes elongated. Stolons absent or present. Culms erect or geniculately ascending, $30-100 \mathrm{~cm}$ long. Leaves distichous. Ligule a ciliate membrane. Leafblades erect, flat or convolute, 7-25 cm long, 2-8 mm wide, coriaceous, stiff, glaucous. Leaf-blade apex acuminate or attenuate, muticous or pungent.

Inflorescence. Inflorescence a panicle. Panicle open, oblong, $5-20 \mathrm{~cm}$ long. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, acute, $2.5-3 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume oblate, 0.33 length of spikelet, hyaline, without keels, $1(-3)$-veined. Lower glume lateral veins absent or obscure. Lower glume apex obtuse or acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, (7-)9 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 7-9 -veined, acute. Fertile lemma oblong, dorsally compressed, 22.5 mm long, indurate, pallid, shiny, without keel, more than 3 -veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. $n=9$ ( 1 ref TROPICOS), or 18 ( 1 ref TROPICOS), or 27 ( 2 ref TROPICOS). $2 n=$ 36 ( 2 refs TROPICOS).

TYPE from Australia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Australia: Queensland: North Kennedy Dist.: Brandy Creek road, 12 km from its source, 13 Apr 1978, B.K. Simon, J.R. Clarkson \& N.B. Byrnes 3370 (HT: BRI-AQ344285; IT: BRI, CANB, DNA, K, L, MO, NSW).

Illustrations (Books): D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002).

Illustrations (Journals): Austrobaileya (3:599, Fig. 6 (1992)).
Derivation (Clifford \& Bostock 2007): L. robust. Culms tall, or leaf-blades or spikelets large.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual, caespitose, clumped loosely. Culms erect or geniculately ascending, robust, $80-180 \mathrm{~cm}$ long, 3-5 -noded. Lateral branches lacking or sparse. Leaf-sheaths mostly shorter than adjacent culm internode, without keel. Ligule a ciliate membrane, 2 mm long. Leaf-blades $10-$ 35 cm long, $5-10 \mathrm{~mm}$ wide. Leaf-blade midrib conspicuous. Leaf-blade surface hispid, with tubercle-based hairs. Leaf-blade margins scaberulous.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, effuse, $25-40 \mathrm{~cm}$ long. Primary panicle branches spreading, $10-18 \mathrm{~cm}$ long. Panicle branches scabrous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, angular, $2-4 \mathrm{~mm}$ long, scabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate, dorsally compressed, $4.5-5 \mathrm{~mm}$ long, 1 mm wide, falling entire. Rhachilla internodes elongated between glumes.

Glumes. Glumes similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate, $4.5-5 \mathrm{~mm}$ long, 1 length of spikelet, membranous, without keels, $5-7$-veined. Lower glume apex acuminate. Upper glume lanceolate, $3.5-4 \mathrm{~mm}$ long, $0.7-0.8$ length of spikelet, membranous, without keels, 5-7 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, lanceolate, $3.5-4 \mathrm{~mm}$ long, $0.7-0.8$ length of spikelet, membranous, $5-7$-veined, acute. Fertile lemma elliptic, dorsally compressed, 2 mm long, indurate, yellow, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers $3,1.5 \mathrm{~mm}$ long. Caryopsis 2 mm long.
Distribution (TDWG). Continent. Australasia.
Country /Province /State. Australia. Queensland.
North, Central.

Panicum robynsii A.Camus. Bull. Mus. Hist. Nat. Paris, Ser. II. v. 336 (1933).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online.
TYPE from DRC. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Humbert 8759, Zaire: Beni (P).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): in honor of Frans Hubert Edouard Arthur Walter Robyns (1901-1986), Belgian botanist.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms decumbent or rambling, slender, 25-100 cm long. Ligule a ciliate membrane. Leaf-blades lanceolate or ovate, tapering towards sheath, $5-10 \mathrm{~cm}$ long, 5-15 mm wide, membranous. Leaf-blade venation with distinct cross veins. Leaf-blade surface scaberulous, glabrous or pilose, sparsely hairy. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes 3-6, borne along a central axis, paucilateral, $2-5 \mathrm{~cm}$ long. Central inflorescence axis $12-20 \mathrm{~cm}$ long. Spikelets in pairs. Fertile spikelets pedicelled, 2 in the cluster. Pedicels present, unequal.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or ovate, dorsally compressed, obtuse or acute, $2.2-2.5 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.66-0.75 length of spikelet, membranous, without keels, 3 -veined. Lower glume surface scabrous. Lower glume apex acute, mucronate. Upper glume ovate, 1 length of spikelet, membranous, without keels, 3-7veined. Upper glume surface scabrous. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, hyaline, 3-5 -veined, scabrous, obtuse. Fertile lemma oblong, dorsally compressed, 2 mm long, indurate, pallid, shiny, without keel, more than 3-veined. Lemma margins involute. Lemma apex apiculate. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province/State. West-Central Tropical Africa, East Tropical Africa, South Tropical Africa, Western Indian Ocean. DRC. Kenya, Tanzania, Uganda. Angola. Madagascar.

Derivation (Clifford \& Bostock 2007): in honor of Edward Rudge (1763-1846) English magistrate and amateur botanist.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose, clumped densely. Culms erect or geniculately ascending, $75-125 \mathrm{~cm}$ long, $1.5-3 \mathrm{~mm}$ diam. Culm-internodes distally pilose. Culm-nodes bearded. Lateral branches ample, arising from upper culm. Leaf-sheaths pilose. Ligule a ciliate membrane, $1.5-2 \mathrm{~mm}$ long. Leaf-blades $20-40 \mathrm{~cm}$ long, $8-14 \mathrm{~mm}$ wide, stiff. Leaf-blade surface pilose. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle, terminal and axillary. Axillary inflorescences intermingled with terminal. Panicle open, ovate, effuse, $30-40 \mathrm{~cm}$ long, $10-20 \mathrm{~cm}$ wide. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, acuminate, 3-3.4 mm long, falling entire. Rhachilla internodes elongated between glumes or elongated below proximal fertile floret. Rhachilla elongation 0.5 mm long.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma, gaping. Lower glume ovate, $2.7-2.9 \mathrm{~mm}$ long, 0.75 length of spikelet, membranous, without keels, 3-5 -veined. Lower glume surface pubescent, hairy above. Lower glume apex acuminate. Upper glume ovate, 3-3.4 mm long, 1 length of spikelet, membranous, without keels, 5-7 -veined. Upper glume surface pubescent, hairy above. Upper glume apex acuminate.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 2.5 mm long, 1 length of spikelet, membranous, 7-9 -veined, pubescent, hairy above, acuminate. Fertile lemma elliptic, dorsally compressed, $1.7-1.9 \mathrm{~mm}$ long, indurate, shiny, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3, $0.6-0.9 \mathrm{~mm}$ long, purple.
$2 n=18$ ( 1 ref TROPICOS).
Distribution (TDWG). Continent. North America, South America.
Country /Province /State. Mexico. Southeast Mexico. Mesoamerica, Caribbean, Northern South America, Western South America, Brazil. Belize, Costa Rica, Guatemala, Honduras, Nicaragua, Panama. Jamaica, Trinidad-Tobago. French Guiana, Surinam, Venezuela. Bolivia, Colombia, Peru. Brazil West Central, Brazil Northeast, Brazil Southeast, Brazil North, Brazil South.

TYPE from Somalia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Surro, Somali, D. Riva 66(1444).

Illustrations (Books): S.Phillips, Poaceae (Gramineae) in I.Hedberg \& S.Edwards, Flora of Ethiopia and Eritrea (1995) (200, Fig 83).

Derivation (Clifford \& Bostock 2007): in honor of Eugenio Ruspoli (1866-1893) Italian nobleman who travelled in Somalia.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Cataphylls evident. Rhizomes short. Basal innovations extravaginal. Culms $40-80 \mathrm{~cm}$ long, woody. Culm-internodes glaucous. Lateral branches fastigiate. Leafsheaths longer than adjacent culm internode, glabrous on surface or pubescent. Ligule a ciliate membrane. Leaf-blades flat or involute, $15-30 \mathrm{~cm}$ long, $4-7 \mathrm{~mm}$ wide. Leaf-blade surface pilose. Leaf-blade apex attenuate.

Inflorescence. Inflorescence a panicle. Panicle open, lanceolate or obovate, $10-18 \mathrm{~cm}$ long, 3-4 cm wide. Primary panicle branches $1-2$ nate, $5-8 \mathrm{~cm}$ long. Panicle branches capillary, scaberulous. Spikelets in pairs or in threes. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or ovate, dorsally compressed, compressed slightly, acuminate, $3.5-4 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma, gaping. Lower glume ovate, 0.5 length of spikelet, membranous, without keels, 3-7 -veined. Lower glume apex acuminate, mucronate. Upper glume lanceolate or ovate, 1 length of spikelet, membranous, without keels, 7-9 -veined. Upper glume apex acuminate, mucronate.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, lanceolate or ovate, 1 length of spikelet, membranous, 9 -veined, acuminate. Fertile lemma oblong, dorsally compressed, $2.5-3 \mathrm{~mm}$ long, chartaceous or indurate, pallid or yellow, shiny, without keel. Lemma margins involute. Lemma apex obtuse or acute. Palea involute, chartaceous or indurate.

Flower and Fruit. Anthers 3, 2 mm long, purple. Stigmas purple.
Distribution (TDWG). Continent. Africa.
Country /Province /State. Northeast Tropical Africa. Ethiopia (inc. Eritrea).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Chamisso s.n., s.d., [Brasil]: in Santa Catharina (LE-TRIN-0942.01).

Illustrations (Books): S.A.Renvoize, The Grasses of Bahia, 1984 (171, Fig. 63), L.B. Smith, D.C. Wasshausen, R.M. Klein Flora Illustrada Catarinensis Gramineas (1981-1982) (720, Fig. 152).

Derivation (Clifford \& Bostock 2007): Gk skiouros, squirrel. The inflorescence resembles a squirrel's tail.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms decumbent, $5-25 \mathrm{~cm}$ long, rooting from lower nodes. Culm-internodes elliptical in section, $2-8 \mathrm{~cm}$ long, distally hirsute. Culm-nodes black, pubescent. Lateral branches ample, arising from lower culm. Leaf-sheaths $1-5 \mathrm{~cm}$ long, hirsute, outer margin hairy. Ligule a
ciliate membrane, 0.4 mm long. Collar pilose. Leaf-blade base amplexicaul. Leaf-blades lanceolate or oblong, $1.5-9 \mathrm{~cm}$ long, $8-28 \mathrm{~mm}$ wide. Leaf-blade midrib indistinct. Leaf-blade surface pilose, with tubercle-based hairs. Leaf-blade margins ciliate.

Inflorescence. Inflorescence a panicle, terminal and axillary. Axillary inflorescences similar to terminal. Peduncle $5-7.5 \mathrm{~cm}$ long, pilose above. Panicle open, ovate, effuse, $2-7 \mathrm{~cm}$ long, $1-5 \mathrm{~cm}$ wide. Panicle axis tuberculate, pilose. Panicle branches flexuous, with scattered hairs or glabrous, pubescent in axils. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, smooth, glabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, $1.5-1.7 \mathrm{~mm}$ long, $0.7-$ 0.8 mm wide, falling entire.

Glumes. Glumes dissimilar, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, not clasping, $0.3-0.4 \mathrm{~mm}$ long, $0.2-0.25$ length of spikelet, membranous, without keels, 0 -veined. Lower glume lateral veins absent. Lower glume apex truncate. Upper glume elliptic, 0.9 length of spikelet, membranous, without keels, $5(-7)$-veined. Upper glume lateral veins obscure. Upper glume surface pilose. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5 -veined, obscurely veined, pilose, obtuse. Palea of lower sterile floret 0.9 mm long. Fertile lemma elliptic, dorsally compressed, $1.4-1.5 \mathrm{~mm}$ long, $0.5-0.7 \mathrm{~mm}$ wide, indurate, shiny, without keel. Lemma margins involute. Lemma apex apiculate. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp, obovoid. Embryo 0.33 length of caryopsis. Hilum punctiform.

Distribution (TDWG). Continent. South America.
Country /Province /State. Caribbean, Western South America, Brazil. Jamaica. Brazil Northeast, Brazil North, Brazil South.

Bahia, Minas Gerais, Rio de Janeiro, Espirito Santo, Sao Paulo Parana, Catarina, Rio Grande do Sul. Paraná, Santa Catarina.

Illustrations (Journals): Novon (1: 2, Fig. 1 (1992)).
Derivation (Clifford \& Bostock 2007): Gk -oides, resembling. Resembling Panicum sciurotis.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms decumbent, $10-85 \mathrm{~cm}$ long, rooting from lower nodes. Culm-internodes thin-walled, $2.5-11.5 \mathrm{~cm}$ long, distally glabrous or hispid. Culm-nodes constricted, black, pubescent. Lateral branches ample, arising from upper culm. Leaf-sheaths $3-6.5 \mathrm{~cm}$ long, striately veined, glabrous on surface or pilose, with tubercle-based hairs, outer margin hairy. Ligule a ciliate membrane. Collar pilose. Leaf-blade base amplexicaul, asymmetrical. Leaf-blades lanceolate or ovate, 3-10 cm long, $8-20 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pubescent or hirsute, hairy adaxially, with tubercle-based hairs. Leaf-blade margins scabrous, ciliate, hairy at base.

Inflorescence. Inflorescence a panicle. Panicle open, pyramidal, effuse, $2.5-9 \mathrm{~cm}$ long, $1.5-8.5 \mathrm{~cm}$ wide. Panicle axis villous. Panicle branches flexuous, glabrous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, glabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, $1.5-1.9 \mathrm{~mm}$ long, $0.5-$ 0.7 mm wide, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.4-0.9 \mathrm{~mm}$ long, $0.33-0.5$ length of spikelet, membranous, without keels, $1-3(-7)$-veined. Lower glume apex truncate to acute. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 7-9 -veined. Upper glume surface pubescent. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 7-9 -veined, pubescent, acute. Palea of lower sterile floret 0.5 length of lemma. Fertile lemma elliptic, dorsally compressed, $1.2-1.7 \mathrm{~mm}$ long, $0.4-0.6 \mathrm{~mm}$ wide, indurate, shiny, without keel. Lemma surface papillose. Lemma margins involute. Lemma apex apiculate. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp, 1.1 mm long.
Distribution (TDWG). Continent. South America.
Country /Province /State. Mesoamerica, Northern South America, Western South America, and Brazil. Brazil North.

Panicum seminudum Domin. Biblioth. Bot. 1 v. 320 (1915).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), D.Sharp, D. \& B.K.Simon, AusGrass (2002), J.F.Veldkamp, Poaceae ms (Flora Malesiana).

TYPE from Australia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Domin 1/1910, Jan 1910, Australia: Queensland (PR; IT: K (fragm.)).

Illustrations (Books): D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002).

Images: D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002);, K.Domin, Bibliotheca Botanica 85 (1915) (321, Fig. 74 as var. cairnsianum).

Derivation (Clifford \& Bostock 2007): L. semi-, half; nuda, bare. Only part of the plant bearing hairs.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms erect, 40-90 cm long, 2-5 -noded. Culm-nodes glabrous. Leaf-sheaths glabrous on surface or pubescent, outer margin glabrous or hairy. Ligule a ciliate membrane, $0.8-1.5 \mathrm{~mm}$ long. Leaf-blades $4-30 \mathrm{~cm}$ long, $3-9 \mathrm{~mm}$ wide. Leaf-blade surface smooth or scabrous, glabrous or pilose. Leaf-blade margins scabrous, glabrous or ciliate, hairy at base.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $15-30 \mathrm{~cm}$ long, evenly furnished or with spikelets clustered towards branch tips. Primary panicle branches spreading, $10-25 \mathrm{~cm}$ long, bearing 20-60 fertile spikelets on each lower branch. Panicle axis scabrous. Panicle branches scabrous, glabrous in axils. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $1-7 \mathrm{~mm}$ long, scabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate or elliptic, dorsally compressed, 3.1-3.7 mm long, $1-1.8 \mathrm{~mm}$ wide, falling entire. Rhachilla internodes elongated between glumes. Rhachilla elongation $0.4-0.5 \mathrm{~mm}$ long.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume lanceolate or ovate, $2.3-3.3 \mathrm{~mm}$ long, $0.75-0.95$ length of spikelet, membranous, without keels, $3-5$-veined. Lower glume lateral veins thickened. Lower glume apex acute or acuminate. Upper glume lanceolate or ovate, 1 length of spikelet, membranous, without keels, 7 -veined. Upper glume apex obtuse or acute or acuminate.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, lanceolate or ovate, 1 length of spikelet, membranous, 5 -veined, acute or acuminate. Fertile lemma elliptic, dorsally compressed, $1.9-2.2 \mathrm{~mm}$ long, indurate, without keel. Lemma lateral veins distinct. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1.2-1.4 mm long. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Tropical Asia, Australasia.
Country /Province /State. Malesia, Papuasia. New Guinea. Australia. Western Australia, Northern Territory, Queensland.

Kimberley. Darwin \& Gulf. North, Inland.

Panicum semitectum Swallen. Phytologia, xiv. 68 (1966).
TYPE from Brazil. Basionym or Replaced Name: Panicum emergens Döll, Fl. Bras. 2(2): 269 (1877). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: IT: L. Riedel 1961, no date, Brazil: São Paulo (US-974685 (fragm. ex LE), US-974686 (fragm. ex K, KR)).

Illustrations: None found.

Derivation (Clifford \& Bostock 2007): L. semi-, half; tectum, roof. Glumes almost as long as the spikelet.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Culms rambling, 220 cm long. Culm-internodes similar in length, distally glabrous. Leaf-sheaths mostly shorter than adjacent culm internode, glabrous on surface. Ligule a ciliate membrane. Leaf-blades lanceolate, $22-27 \mathrm{~cm}$ long, $25-40 \mathrm{~mm}$ wide. Leaf-blade surface glabrous. Leaf-blade margins scabrous. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, pyramidal, 37 cm long. Primary panicle branches $3-6 \mathrm{~cm}$ long. Panicle axis scabrous. Panicle branches scabrous, with scattered hairs. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, $2-2.5 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.66-0.75 length of spikelet, membranous, without keels, 3 -veined. Lower glume surface scabrous, rough above. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume margins ciliate. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, ciliate on margins, acute. Fertile lemma elliptic, dorsally compressed, 1.5 mm long, indurate, yellow, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil West Central, Brazil Southeast.
Goias, Minas Gerais, Rio de Janeiro, Espirito Santo.

Panicum shinyangense S.A. Renvoize. Kew Bull., 34(3): 554 (1979).

TYPE from Tanzania. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Steinhauser s.n., Aug. 1912, Tanzania: Shinyanga (K).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From Shinyanga, Tanzania.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths green. Culms 60-100 cm long. Ligule a ciliate membrane. Leaf-blades parallel-sided, $10-15 \mathrm{~cm}$ long, $5-6 \mathrm{~mm}$ wide. Leaf-blade surface pilose, sparsely hairy. Leaf-blade apex abruptly acute.

Inflorescence. Inflorescence a panicle. Panicle open, oblong, $20-30 \mathrm{~cm}$ long. Primary panicle branches ascending or spreading. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, acuminate, 3-3.5 mm long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume oblate, 0.2 length of spikelet, membranous, without keels, 1 -veined. Lower glume lateral veins absent. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 7 -veined. Upper glume apex acuminate.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 7 -veined, acute. Fertile lemma oblong, dorsally compressed, 2.53 mm long, indurate, dark brown or black, shiny, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province/State. East Tropical Africa. Tanzania.

Images: D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002);,
Derivation (Clifford \& Bostock 2007): L. like. Readily confused with one or more other species.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual, caespitose. Butt sheaths pubescent. Basal innovations extravaginal. Culms erect, slender, $20-70 \mathrm{~cm}$ long, wiry, 2-4 -noded. Culm-internodes scaberulous, distally glabrous or pilose, with tubercle-based hairs. Culm-nodes glabrous. Lateral branches lacking or sparse. Leaf-sheaths pilose, with tubercle-based hairs. Ligule a ciliate membrane, 0.25 mm long. Leaf-blades flat or involute, $3-15 \mathrm{~cm}$ long, $1-3.5 \mathrm{~mm}$ wide. Leaf-blade midrib scarcely raised beneath. Leaf-blade surface glabrous or pilose, sparsely hairy, hairy on both sides, with tubercle-based hairs. Leaf-blade apex acute.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, 4-20 cm long, with spikelets clustered towards branch tips. Primary panicle branches spreading, distant, 1 -nate, sparsely divided. Panicle branches capillary, scaberulous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $1.5-10 \mathrm{~mm}$ long, tip discoid.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate or elliptic, dorsally compressed, acute or acuminate, $2.25-3.5 \mathrm{~mm}$ long, falling entire. Rhachilla internodes elongated between glumes.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma, parallel to lemmas or gaping. Lower glume ovate, 0.5 length of spikelet, membranous, without keels, 3-5 -veined. Lower glume apex acute. Upper glume elliptic, 1 length of spikelet, membranous, pallid or purple, without keels, 5-7-veined. Upper glume apex acute or acuminate.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 0.9-1 length of spikelet, membranous, 7 -veined, acute or acuminate. Palea of lower sterile floret 0.5 length of lemma. Fertile lemma elliptic, dorsally compressed, $2-2.5 \mathrm{~mm}$ long, indurate, pallid or yellow or light brown, shiny, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Australasia.
Country /Province/State. Australia. Northern Territory, Queensland, New South Wales, Victoria. Darwin \& Gulf. North, Central, South East, Inland. Coast, Tablelands, Western Slopes.

Panicum simulans L. Smook. Bothalia, 23(1): 59 (1993).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online.
TYPE from Namibia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Namibia: 1915 ()tjihorongo): 25 km N of Outjo on road to Okaukuejo, (-DD),, Smook 5108 (HT: PRE).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. simulo, resemble. Resembling another species, usually in the same genus.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.

Habit, Vegetative Morphology. Annual. Culms 60-120 cm long, without nodal roots or rooting from lower nodes. Culm-nodes pubescent. Leaf-sheaths longer than adjacent culm internode, glabrous on surface or hirsute, with tubercle-based hairs. Ligule a ciliate membrane, 1.4 mm long. Leaf-blade base simple or cordate. Leaf-blades linear or lanceolate, $1-25 \mathrm{~cm}$ long, $2-15 \mathrm{~mm}$ wide. Leaf-blade surface papillose, rough adaxially. Leaf-blade margins smooth to scabrous. Leaf-blade apex acute or acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, obovate, $8-40 \mathrm{~cm}$ long. Primary panicle branches ascending or spreading, 1 -nate. Spikelets in pairs. Fertile spikelets pedicelled, 2 in the cluster. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, acute or acuminate, $2.6-3 \mathrm{~mm}$ long, falling entire. Rhachilla internodes elongated between glumes.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, clasping, $0.33-0.5$ length of spikelet, membranous, without keels, 1(-3) -veined. Lower glume primary vein smooth or scaberulous. Lower glume lateral veins absent or prominent. Lower glume apex acute or acuminate. Upper glume ovate, $2.4-3 \mathrm{~mm}$ long, 1 length of spikelet, membranous, pallid or purple, without keels, $7-9(-11)$-veined. Upper glume hairs 2 mm long or 3 mm long. Upper glume apex acute or acuminate, mucronate.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, $2.2-2.3 \mathrm{~mm}$ long, membranous, much thinner on margins, pallid or purple, (7-)9 -veined, without cross-veins or with cross-veins, scaberulous, rough on midvein, truncate or acute. Palea of lower sterile floret 1 length of lemma. Fertile lemma oblong, dorsally compressed, $2-2.5 \mathrm{~mm}$ long, indurate, pallid, shiny, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1.4-1.7 mm long.
Distribution (TDWG). Continent. Africa.
Country /Province /State. Southern Africa. Namibia.

## Panicum smithii M.M. Rahman. Blumea, 34(1): 173 (1989).

Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online.
TYPE from Vietnam. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: North Vietnam, Tonkin, 25 Jan. 1886, Balansa 468 (HT: L).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): In honor of Philip Morgans Smith (1941-2004) English-born Scottish botanist and educator.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Stolons present. Culms erect or geniculately ascending, slender, $15-35 \mathrm{~cm}$ long, $1-2 \mathrm{~mm}$ diam., without nodal roots or rooting from lower nodes. Culm-nodes glabrous. Leaf-sheaths mostly shorter than adjacent culm internode, striately veined, glabrous on surface, outer margin hairy. Ligule an eciliate membrane, lacerate. Leaf-blades $4-8 \mathrm{~cm}$ long, $3-5 \mathrm{~mm}$ wide. Leafblade midrib indistinct. Leaf-blade surface glabrous.

Inflorescence. Inflorescence a panicle. Panicle open, pyramidal, effuse, $5-15 \mathrm{~cm}$ long. Primary panicle branches $7-10$ in number, spreading, $3-7 \mathrm{~cm}$ long. Panicle axis scaberulous. Panicle branches capillary, scaberulous. Spikelets in pairs. Fertile spikelets pedicelled, 2 in the cluster. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong or ovate, dorsally compressed, acute, 2-2.3 mm long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.66 length of spikelet, membranous, without keels, 5 -veined. Lower glume margins ciliolate. Lower glume apex obtuse. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface pilose, hairy above. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, oblong, 1 length of spikelet, membranous, 5 -veined, pilose, hairy above, acute. Fertile lemma elliptic or obovate, dorsally compressed, 2 mm long, indurate, without keel. Lemma surface smooth. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers $3,0.75 \mathrm{~mm}$ long. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Tropical Asia.
Country /Province/State. Indo-China. Vietnam.

Panicum socotranum T.A. Cope. Kew Bull., 39(4): 835 (1984).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online.
TYPE from Socotra. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Socotra, Jebel Rughid: Radcliffe-Smith \& Lavranos 617 (K holo.

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. -anum, indicating location. From Socotra, a Yemeni island in the Gulf of Aden.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rootstock evident. Culms erect or geniculately ascending, $15-30 \mathrm{~cm}$ long. Lateral branches lacking. Leaves distichous. Leaf-sheaths without keel, glabrous on surface. Ligule a fringe of hairs. Leaf-blades flat or involute, $2.5-4.5 \mathrm{~cm}$ long, $1.5-2.5 \mathrm{~mm}$ wide, stiff. Leaf-blade apex acute.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, effuse, $4.5-5.5 \mathrm{~cm}$ long, $3-6.5 \mathrm{~cm}$ wide. Primary panicle branches whorled at lower nodes. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, filiform, flexuous, 2-4 length of fertile spikelet.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, obtuse, 6 mm long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.5 length of spikelet, membranous, without keels, 3 -veined. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, acute. Fertile lemma elliptic, dorsally compressed, 2 mm long, indurate, pallid, shiny, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers $3,1.2 \mathrm{~mm}$ long.
Distribution (TDWG). Continent. Africa.
Country /Province /State. Northeast Tropical Africa. Socotra.
Panicum sparsicomum Nees ex Steud. Syn. Pl. Gram. 83. (1854).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), N.L.Bor, Grasses of Burma, Ceylon, India and Pakistan (1960).

TYPE from Sri Lanka. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: "Ins. Ceylon", "in T notes on type, no spikelets".

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. sparsus, few or scattered; como, hair of head. Spikelets few and distant on the panicle.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual or perennial, short-lived. Culms rambling, 50-150 cm long (long), rooting from lower nodes. Culm-internodes distally pubescent. Culm-nodes pubescent. Lateral branches ample. Leaf-sheaths without keel, pubescent, outer margin hairy. Leaf-sheath oral hairs ciliate. Ligule a ciliate membrane, $0.2-0.4 \mathrm{~mm}$ long. Collar pubescent. Leaf-blade base broadly rounded or cordate, asymmetrical. Leaf-blades lanceolate, $2.5-9 \mathrm{~cm}$ long, $5-11 \mathrm{~mm}$ wide. Leaf-blade surface puberulous to hirsute. Leaf-blade margins scaberulous, ciliate, hairy at base.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $5-17 \mathrm{~cm}$ long. Primary panicle branches spreading. Panicle branches smooth or scabrous, pubescent in axils. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the
lower floret male or barren, the upper fertile. Spikelets elliptic, laterally compressed, compressed slightly, gibbous, acute, $1.5-1.9 \mathrm{~mm}$ long, falling entire. Rhachilla internodes elongated between glumes.

Glumes. Glumes shorter than spikelet, thinner than fertile lemma. Lower glume ovate, $0.7-0.9 \mathrm{~mm}$ long, 0.5 length of spikelet, membranous, without keels, 1 -veined. Lower glume lateral veins absent. Lower glume apex acute. Upper glume ovate, $1.2-1.5 \mathrm{~mm}$ long, $0.66-0.75$ length of spikelet, membranous, without keels, 5 -veined. Upper glume lateral veins prominent. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, prominently veined, acute. Palea of lower sterile floret 0.5 length of lemma. Fertile lemma elliptic, dorsally compressed, $1.3-1.6 \mathrm{~mm}$ long, indurate, yellow or light green, shiny, without keel. Lemma surface punctate. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 0.7-0.9 mm long. Caryopsis with adherent pericarp, ellipsoid, 0.9 mm long.

Distribution (TDWG). Continent. Tropical Asia.
Country/Province /State. Indian Subcontinent. India, Sri Lanka.
Tamilnadu.

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. folium, leaf. Leaf-blades resembling those of Spergula.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Stolons present. Culms erect, 20-25 cm long. Lateral branches ample. Leaves cauline, distichous. Leaf-sheaths glabrous on surface. Ligule a ciliolate membrane. Leaf-blades erect, flat or involute, $1-3 \mathrm{~cm}$ long, 1.5 mm wide, yellowish green. Leaf-blade surface glabrous or pilose, sparsely hairy. Leaf-blade margins ciliate. Leaf-blade apex obtuse.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, 3-6 cm long, 2-5 cm wide. Panicle branches capillary. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $9-12 \mathrm{~mm}$ long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, obtuse, $3.5-3.8 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $1.8-2 \mathrm{~mm}$ long, 0.5 length of spikelet, membranous, purple, without keels, 3 -veined. Lower glume apex obtuse. Upper glume ovate, $2.4-2.7 \mathrm{~mm}$ long, 1 length of spikelet, membranous, purple, without keels, 5 veined. Upper glume surface puberulous, hairy at apex. Upper glume apex obtuse.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, purple, 7 -veined, puberulous, hairy at apex, obtuse. Fertile lemma oblong or ovate, dorsally compressed, 3.5 mm long, indurate, yellow, shiny, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers 2.5 mm long.
Distribution (TDWG). Continent. Africa.
Country /Province /State. Western Indian Ocean. Madagascar.

Panicum sphaerocarpon Ell. Sketch, i. 125 (1816).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), E.Edgar, \& H.Connor, Flora of New Zealand Gramineae 5 (2000).

TYPE from USA. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: W. Baldwin s.n., Apr, USA: Georgia (CHARL; IT: US-81121 (fragm. ex CHARL \& photo)).

Illustrations (Books): A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (288, Fig. 270).

Derivation (Clifford \& Bostock 2007): Gk sphaera, ball; karpos, fruit. Spikelets almost circular in outline.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Culms geniculately ascending or decumbent, 20-80 cm long. Culm-nodes glabrous or pubescent. Lateral branches sparse. Leaves basal and cauline, heterophyllous with a basal winter rosette. Leaf-sheaths glabrous on surface, outer margin hairy. Ligule a fringe of hairs or absent, $0-0.7 \mathrm{~mm}$ long. Leaf-blade base cordate. Leaf-blades lanceolate, $3-6.5 \mathrm{~cm}$ long, $7-14 \mathrm{~mm}$ wide, light green. Leaf-blade surface glabrous. Leaf-blade margins tuberculate-ciliate, hairy at base.

Inflorescence. Inflorescence a panicle. Peduncle 4-13 cm long. Panicle open, ovate or pyramidal, 8-15 cm long. Panicle axis glabrous. Panicle branches glabrous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong or orbicular or obovate, with obtuse base, dorsally compressed, obtuse, $1.4-2 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.4-0.7 \mathrm{~mm}$ long, $0.2-0.33$ length of spikelet, membranous, without keels, 1 -veined. Lower glume lateral veins absent. Lower glume apex acute. Upper glume oblong, 1 length of spikelet, membranous, without keels, 5-7 -veined. Upper glume surface glabrous or puberulous. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, oblong, 1 length of spikelet, membranous, 7 -veined, glabrous or puberulous, obtuse. Fertile lemma oblong or orbicular or obovate, dorsally compressed, $1.4-2 \mathrm{~mm}$ long, indurate, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers $3,0.4 \mathrm{~mm}$ long. Caryopsis with adherent pericarp, ellipsoid, 1 mm long.

Riedel 226, no date, Brazil: Rio de Janeiro (US-97421).

[^1]Derivation (Clifford \& Bostock 2007): L. stigma, mark; -osa, abundance. Leaf-sheath with very small glands.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Culms leaning, 50-100 cm long. Culm-internodes elliptical in section, 4-19 cm long, glandular, distally glabrous. Culm-nodes constricted, brown, glabrous or pubescent. Lateral branches ample, arising from lower culm and upper culm. Leaf-sheaths 3-11 cm long, glandular, glabrous on surface or hispid, outer margin hairy. Ligule a ciliate membrane, $1-1.6 \mathrm{~mm}$ long. Collar pubescent or pilose. Leaf-blade base broadly rounded or cordate. Leaf-blades lanceolate, 10-22 cm long, $10-22 \mathrm{~mm}$ wide, eglandular or glandular. Leaf-blade surface glabrous or pilose, sparsely hairy, hairy adaxially or on both sides. Leaf-blade margins scabrous, ciliate. Leaf-blade apex attenuate.

Inflorescence. Inflorescence a panicle. Peduncle $9-34 \mathrm{~cm}$ long, glandular, glabrous or pilose above. Panicle open, ovate, effuse, $9-21 \mathrm{~cm}$ long, $6-15 \mathrm{~cm}$ wide. Panicle axis glabrous or pilose. Panicle branches flexuous, glandular, scaberulous, pubescent in axils. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, clavate, scabrous, bearing a few hairs or ciliate.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or oblong, dorsally compressed, $2.4-3.2 \mathrm{~mm}$ long, $1.1-1.3 \mathrm{~mm}$ wide, falling entire. Rhachilla internodes elongated between glumes.

Glumes. Glumes similar, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, clasping, $1.1-1.8 \mathrm{~mm}$ long, $0.5-0.75$ length of spikelet, membranous, without keels, ( $1-$ ) 3 -veined. Lower glume apex acute. Upper glume elliptic, 2-2.4 mm long, 0.9 length of spikelet, membranous, without keels, $7-9$-veined. Upper glume lateral veins distinct. Upper glume apex acute.

Florets. Basal sterile florets 1, male or barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 7-9 -veined, acute. Palea of lower sterile floret 1 length of lemma, pilose, adorned on flanks. Fertile lemma elliptic, dorsally compressed, 1.9-2.1 mm long, indurate, yellow, without keel. Lemma surface papillose. Lemma margins involute. Lemma apex acuminate. Palea involute, indurate.

Flower and Fruit. Anthers 3, 0.7 mm long. Caryopsis with adherent pericarp, ellipsoid, 1.3 mm long. Embryo 0.33 length of caryopsis. Hilum punctiform.

Distribution (TDWG). Continent. South America.

Illustrations (Books): S.A.Renvoize, The Grasses of Bahia, 1984 (170, Fig. 62).
Derivation (Clifford \& Bostock 2007): L. stipes, stalk; flos, flower. Glumes separated by a small stipe.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms decumbent, $20-30 \mathrm{~cm}$ long. Culm-internodes terete, distally pubescent. Culm-nodes constricted, pubescent. Lateral branches ample, arising from upper culm. Leaf-sheaths pilose, outer margin hairy. Ligule a ciliate membrane, 0.3 mm long. Leaf-blade base
amplexicaul. Leaf-blades lanceolate or oblong, $2-6 \mathrm{~cm}$ long, $6-15 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pilose. Leaf-blade margins cartilaginous, scabrous, tuberculate-ciliate.

Inflorescence. Inflorescence a panicle. Peduncle $10-20 \mathrm{~cm}$ long, glabrous. Panicle open, ovate, effuse, $3-8 \mathrm{~cm}$ long, $2-5 \mathrm{~cm}$ wide. Panicle axis pilose. Panicle branches eglandular, pilose, pubescent in axils. Spikelets solitary or in pairs. Fertile spikelets pedicelled. Pedicels present, $0.6-2 \mathrm{~mm}$ long, ciliate.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, $2.2-2.6 \mathrm{~mm}$ long, 0.9 mm wide, falling entire. Rhachilla internodes elongated between glumes.

Glumes. Glumes dissimilar, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, not clasping, 0.5 length of spikelet, membranous, without keels, 3-5 -veined. Lower glume apex acute. Upper glume elliptic, $1.8-2.1 \mathrm{~mm}$ long, 0.8 length of spikelet, membranous, without keels, $7-9$-veined. Upper glume surface pubescent. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 7 -veined, pubescent, acute. Palea of lower sterile floret 1.5 mm long. Fertile lemma elliptic, dorsally compressed, $1.7-1.8 \mathrm{~mm}$ long, 0.7 mm wide, indurate, shiny, without keel, 5 -veined, more than 3 -veined. Lemma margins involute. Lemma apex apiculate, pubescent. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp, ellipsoid, 1.5 mm long. Embryo 0.33 length of caryopsis. Hilum punctiform.

Derivation (Clifford \& Bostock 2007): L. sub, approaching. Resembling Panicum albidum.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual or perennial, short-lived. Butt sheaths papery. Culms erect or decumbent, $60-200 \mathrm{~cm}$ long, $5-10 \mathrm{~mm}$ diam., without nodal roots or rooting from lower nodes. Culmnodes brown, glabrous. Ligule a ciliate membrane. Leaf-blade base simple or cordate. Leaf-blades parallelsided or tapering towards tip, $20-50 \mathrm{~cm}$ long, $7-15 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pilose. Leafblade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, oblong or ovate, $20-50 \mathrm{~cm}$ long. Primary panicle branches spreading. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, acuminate, 3-3.5 mm long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume oblate, $0.25-0.33$ length of spikelet, membranous, without keels, $1-3$-veined. Lower glume apex obtuse or acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 7-9 -veined. Upper glume apex acuminate.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 7-9 -veined, acuminate. Fertile lemma oblong, dorsally compressed, $2.5-3 \mathrm{~mm}$ long, indurate, pallid, shiny, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms decumbent, $20-50 \mathrm{~cm}$ long, rooting from lower nodes. Culm-internodes similar in length, distally glabrous. Lateral branches ample. Leaf-sheaths glabrous on surface or pilose. Ligule a ciliate membrane, 0.5 mm long. Leaf-blade base amplexicaul. Leaf-blades lanceolate, $2.5-4.5 \mathrm{~cm}$ long, $5-9 \mathrm{~mm}$ wide. Leaf-blade surface pilose, hairy adaxially. Leaf-blade apex acute.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $5-9 \mathrm{~cm}$ long. Primary panicle branches ascending. Panicle branches capillary, bearded in axils. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, filiform.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, 1.2 mm long, falling entire.

Glumes. Glumes shorter than spikelet, thinner than fertile lemma. Lower glume lanceolate, 0.5 length of spikelet, membranous, without keels. Lower glume apex acute. Upper glume ovate, 0.66-0.75 length of spikelet, membranous, without keels. Upper glume apex obtuse.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, acute. Fertile lemma elliptic, dorsally compressed, 1 mm long, indurate, pallid, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province/State. Northern South America. Venezuela.

## Panicum subflabellatum Stapf. Prain, Fl. Trop. Afr. ix. 711 (1920).

Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Mozambique. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Mozambique Distr. Portuguese East Africa: West Luabo Mouth of the Zambesi,...", Kirk (May 1858).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. sub, approaching. Similar to Panicum flabellatum.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Cataphylls evident. Rhizomes short. Stolons absent or present. Culms erect or geniculately ascending, 20-50 cm long, wiry. Culm-internodes similar in length. Ligule a ciliate membrane. Leaf-blades appressed or ascending, linear or lanceolate, flat or involute, $3-7 \mathrm{~cm}$ long, 2-3 mm wide, stiff, glaucous. Leaf-blade surface glabrous. Leaf-blade apex pungent.

Inflorescence. Inflorescence a panicle. Panicle open, oblong, 2.5-6 cm long. Primary panicle branches ascending. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets orbicular, dorsally compressed, obtuse, 1.3-1.7 mm long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, gibbous, 0.5 length of spikelet, membranous, without keels, $3-5$-veined. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5-7 -veined, obtuse. Fertile lemma oblong, dorsally compressed, 1.5 mm long, indurate, pallid, dull, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province /State. East Tropical Africa, South Tropical Africa, Southern Africa. Tanzania. Mozambique. Kwazulu-Natal.

Panicum subhystrix A.Camus. Bull. Soc. Bot. France, 1xxii. 708. (1925).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. sub, approaching. Similar to Panicum hystrix.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms erect, weak, 7-14 cm long. Culm-internodes distally pilose. Lateral branches sparse. Leaf-sheaths pilose. Ligule a ciliolate membrane. Leaf-blades $2-5 \mathrm{~cm}$ long, $1-3 \mathrm{~mm}$ wide. Leaf-blade surface pilose. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $1-2.5 \mathrm{~cm}$ long, bearing few spikelets. Panicle branches pilose. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $1.5-2 \mathrm{~mm}$ long, scaberulous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate, dorsally compressed, subacute, 1.5 mm long, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume lanceolate or ovate, $1.3-1.4 \mathrm{~mm}$ long, 0.9 length of spikelet, membranous, without keels, 1 -veined. Lower glume lateral veins absent. Lower glume surface pilose. Lower glume apex acute. Upper glume ovate, 1.5 mm long, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface pilose. Upper glume hairs $0.5-0.7 \mathrm{~mm}$ long. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, pilose, acute. Fertile lemma ovate, dorsally compressed, gibbous, 1 mm long, indurate, pallid, without keel. Lemma surface tuberculate or striate. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province/State. Western Indian Ocean. Madagascar.
Panicum sublaeve Swallen. Contrib. U. S. Nat. Herb. xxix. 424 (1950).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Panama. Basionym or Replaced Name: Panicum rigidum Swallen, Ann. Missouri Bot. Gard. 30(2): 215 (1943). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: H. Pittier 4526, Oct 1911, Panama: Panam? Sabana de San Juan Corso, near Chepo (US-679687).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. sub, approaching. Similar to other species with the epithet laeve or laevis.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Culms erect or geniculately ascending, $15-20 \mathrm{~cm}$ long. Lateral branches lacking or sparse. Leaf-sheaths longer than adjacent culm internode, keeled, glabrous on surface. Ligule a ciliate membrane, 1 mm long. Leaf-blade base broadly rounded. Leaf-blades lanceolate, $8-10 \mathrm{~cm}$ long, $5-10 \mathrm{~mm}$ wide. Leaf-blade surface pilose, hairy adaxially, with tubercle-based hairs. Leafblade apex acuminate.

Inflorescence. Inflorescence a panicle, exserted or embraced at base by subtending leaf. Panicle open, ovate, $5-8 \mathrm{~cm}$ long. Primary panicle branches ascending or spreading. Panicle branches stiff. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, 3.5 mm long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, clasping, 1.5 mm long, $0.33-0.5$ length of spikelet, membranous, without keels, 5 -veined. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 11 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 11 -veined, acute. Fertile lemma elliptic, dorsally compressed, 3 mm long, indurate, without keel. Lemma margins involute. Lemma apex acute, pubescent (sparsely). Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. North America, South America.
Country /Province/State. Mexico. Southwest Mexico, Southeast Mexico. Mesoamerica, Northern South America. Costa Rica, El Salvador, Honduras, Panama. Venezuela.

Colima. Chiapas.

Panicum subtilissimum S.A. Renvoize. Kew Bull., 34(3): 552 (1980).

TYPE from Ivory Coast. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Ivory Coast: Sidi? growing in water, 5 Oct 1960, Ake Assi 5716 (HT: K).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. very subtle. Culms delicate.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual, caespitose. Culms erect, slender, 30-40 cm long. Ligule an eciliate membrane. Leaf-blades filiform or linear, convolute, $5-20 \mathrm{~cm}$ long, $1-2 \mathrm{~mm}$ wide. Leaf-blade apex abruptly acute.

Inflorescence. Inflorescence a panicle. Panicle open, oblong or ovate, $6-10 \mathrm{~cm}$ long. Primary panicle branches spreading or reflexed, simple. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets orbicular, dorsally compressed, 1 mm long, breaking up at maturity.

Glumes. Glumes similar, thinner than fertile lemma. Lower glume ovate, 0.66 length of spikelet, membranous, without keels, $1(-3)$-veined. Lower glume surface glabrous. Upper glume ovate, 1 length of spikelet, membranous, yellow, without keels, 3-5 -veined. Upper glume surface glabrous.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret ovate, 1 length of spikelet, membranous, 5 -veined. Fertile lemma orbicular, dorsally compressed, 1 mm long, chartaceous, pallid, without keel. Lemma surface tuberculate (verruculose). Lemma margins involute. Palea involute, chartaceous. Palea surface tuberculate (verruculose).

Flower and Fruit. Anthers 3.
Distribution (TDWG). Continent. Africa.
Country /Province/State. West Tropical Africa. Ivory Coast.

Panicum sucosum Hitchc. \& Chase. Contr. U.S. Natl. Herb. 17(6): 475, f. 30 (1915).

Images: D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002);.
Derivation (Clifford \& Bostock 2007): Gk. trachys, rough; rhachis, backbone. Panicle axes scabrous.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms erect, 60-180 cm long, 3-6 -noded. Culm-nodes glabrous. Leaf-sheaths smooth, glabrous on surface or pilose, outer margin glabrous. Ligule a ciliate
membrane, $1.2-3 \mathrm{~mm}$ long. Leaf-blades flat or involute, $12-45 \mathrm{~cm}$ long, $3-7 \mathrm{~mm}$ wide. Leaf-blade surface smooth or scabrous, glabrous. Leaf-blade margins smooth.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $30-65 \mathrm{~cm}$ long. Primary panicle branches spreading, whorled at lower nodes, $15-30 \mathrm{~cm}$ long, bearing $40-100$ fertile spikelets on each lower branch. Panicle axis scabrous. Panicle branches scabrous, glabrous in axils. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $0.8-2.5 \mathrm{~mm}$ long, scabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, laterally compressed, compressed slightly, $3.1-3.9 \mathrm{~mm}$ long, $1-1.1 \mathrm{~mm}$ wide, falling entire. Rhachilla internodes elongated between glumes. Rhachilla elongation $0.3-0.4 \mathrm{~mm}$ long.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume lanceolate, 2.1-2.9 mm long, $0.66-0.75$ length of spikelet, membranous, without keels, 3-5 -veined. Lower glume lateral veins thickened. Lower glume apex acute or acuminate, awned, 1 -awned, awn $0.8-1.2 \mathrm{~mm}$ long. Upper glume lanceolate, 1 length of spikelet, membranous, without keels, 7 -veined. Upper glume inner surface pubescent (at tip). Upper glume apex acute, muticous or awned, 1 -awned, awn $0-1 \mathrm{~mm}$ long.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, lanceolate, 1 length of spikelet, membranous, 9 -veined, acute or acuminate, mucronate. Fertile lemma elliptic, dorsally compressed, $2.1-2.4 \mathrm{~mm}$ long, indurate, without keel. Lemma lateral veins distinct. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1.1-1.4 mm long. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Tropical Asia, Australasia.
Country /Province/State. Indo-China, Malesia, Papuasia. Thailand, Vietnam. Lesser Sunda Is. New Guinea West Papua (Irian Jaya). New Guinea. Australia. Western Australia, Northern Territory, Queensland.

Panicum tricholaenoides Steud. Syn. Pl. Gram. 68 (1854).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Uruguay. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Ex. Herbo. Deloche lectum in Montevideo,

Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 1, Aristidoideae a Pharoideae (2012) (367), S.A.Renvoize, Gramineas de Bolivia (1998) (396, Fig. 84), J.A.Steyermark et al, Flora of the Venezuelan Guayana Vol. 8 (2004) (207, Fig. 162), L.B. Smith, D.C. Wasshausen, R.M. Klein Flora Illustrada Catarinensis Gramineas (1981-1982) (675, Fig. 143), A.Burkat, Flora Ilustrada de Entre Rios (Argentina), Pt II, Gramineas (1969) (297, Fig. 117), F.O.Zuloaga et al, Flora del Paraguay 23 (1994) (317, Fig. 93), B.Rosengurtt, Gramineas UruguayasI (1970) (336, Fig. 142).

Derivation (Clifford \& Bostock 2007): Gk. -oides, resembling. The spikelets with their densely hairy glumes and sterile lemmas resemble those of Tricholaena.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Rhizomes short. Culms robust, 150-200 cm long. Culminternodes terete, thin-walled. Lateral branches ample. Leaf-sheaths $8-15 \mathrm{~cm}$ long, outer margin hairy. Ligule a ciliate membrane, 1.5 mm long. Leaf-blades involute or convolute, $25-35 \mathrm{~cm}$ long, 7 mm wide. Leaf-blade surface glabrous to pubescent, sparsely hairy. Leaf-blade margins ciliate.

Inflorescence. Inflorescence a panicle. Panicle open, pyramidal, nodding, 30-40 cm long. Primary panicle branches profusely divided. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, ciliate, hairy at tip.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, $2.3-3 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma, gaping. Lower glume ovate, 1.52.1 mm long, 0.5 length of spikelet, membranous, without keels, 5 -veined. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5-7-veined. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, acute. Fertile lemma elliptic, dorsally compressed, 1.52 mm long, 1.5 mm wide, indurate, pallid, shiny, without keel, 5 -veined, more than 3 -veined. Lemma lateral veins distinct. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 1 mm long. Caryopsis with adherent pericarp, ovoid, yellow. Hilum punctiform.

Distribution (TDWG). Continent. South America.
Country /Province/State. Northern South America, Western South America, Brazil, Southern South America. Venezuela. Bolivia, Colombia. Brazil West Central, Brazil Southeast, Brazil North, Brazil South. Argentina Northeast, Paraguay, Uruguay.

Amazonas, Acre, Rondonia, Goias, Minas Gerais, Rio de Janeiro, Espirito Santo, Catarina, Rio Grande do Sul. Mato Grosso, Goiás, Mato Grosso do Sul. Tocantins. Minas Gerais. Paraná, Rio Grande do Sul, Santa Catarina. Buenos Aires, Chaco, Corrientes, Entre Rios, Misiones, Santa Fe.

TYPE from Zambia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Zambia: 80 km W of Chingola, 18 Jul 1963, E.A. Robinson 6124 (HT: K).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): Gk. thrix, hair; L. nodus, knot. Nodes hairy.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rhizomes short. Butt sheaths pubescent. Culms erect or geniculately ascending, $35-120 \mathrm{~cm}$ long. Culm-nodes pubescent or bearded. Leaves cauline. Ligule a ciliate membrane. Leaf-blades $20-30 \mathrm{~cm}$ long, $3-5 \mathrm{~mm}$ wide. Leaf-blade apex acute.

Inflorescence. Inflorescence a panicle. Panicle open, elliptic or oblong, 10-22 cm long. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, acute, $2.5-3 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume oblate, $0.1-0.25$ length of spikelet, membranous, without keels, $0-1$-veined. Lower glume lateral veins absent. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, herbaceous, without keels, 7-9 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, herbaceous, 7-9 -veined, acute. Fertile lemma oblong, dorsally compressed, 22.5 mm long, indurate, pallid, shiny, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province /State. South Tropical Africa, Southern Africa. Zambia, Zimbabwe. Namibia, Botswana.

TYPE from Madagascar. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Madagascar, Mt Tsaratanana: Perrier 16369.

Illustrations: None found.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual, caespitose, clumped densely. Culms erect or geniculately ascending, $5-20 \mathrm{~cm}$ long. Culm-internodes distally glabrous. Lateral branches ample. Leaf-sheaths loose, striately veined, glabrous on surface or pilose. Ligule a ciliolate membrane. Leaf-blades lanceolate, 1.5-2.5 cm long, $1-2.5 \mathrm{~mm}$ wide. Leaf-blade surface pilose. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, linear, loose, $0.5-1.5 \mathrm{~cm}$ long, bearing few spikelets. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $2.5-4 \mathrm{~mm}$ long, ciliate, with $2-$ 2.5 mm long hairs.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, $1.4-1.5 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.25 length of spikelet, membranous, without keels. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 5 -veined.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5 -veined. Fertile lemma oblong, dorsally compressed, 1.3-1.4 mm long, indurate, pallid, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.

Images: L.Boulos, Flora of Egypt 4 (2005);.
Derivation (Clifford \& Bostock 2007): L. swollen. With swollen spikelets.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial. Cataphylls evident. Culms 40-100(-200) cm long, 1-6 mm diam., woody. Culm-internodes solid, glaucous. Lateral branches suffrutescent. Ligule a ciliate membrane. Leaf-blades deciduous at the ligule, $(0.5-) 2-15 \mathrm{~cm}$ long, $1-6 \mathrm{~mm}$ wide, coriaceous, stiff, glaucous. Leaf-blade apex pungent.

Inflorescence. Inflorescence a panicle. Panicle open, pyramidal, $2.5-15(-30) \mathrm{cm}$ long, contracted about primary branches. Primary panicle branches spreading, distant, bearing spikelets almost to the base. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, compressed slightly, acute or acuminate, (3.1-)3.4-4.5(-5) mm long, falling entire.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma, gaping. Lower glume ovate, $0.75-1$ length of spikelet, membranous, without keels, 5-9 -veined. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, $7-9$-veined. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, $9-11$-veined, acute. Fertile lemma oblong, dorsally compressed, 3 mm long, indurate, pallid or yellow, shiny, without keel, more than 3 -veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3, 2 mm long.

TYPE from Madagascar. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: ST: Veeltzkow 321, Madagsascar ST: Boivin 2266, Madagascar.

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): In honor of Alfred Voeltzkow (1860-1946) German botanist.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose. Stolons absent. Culms erect, 10-35 cm long. Lateral branches lacking or sparse. Ligule a fringe of hairs. Leaf-blades $3-9 \mathrm{~cm}$ long, $2-5 \mathrm{~mm}$ wide. Leafblade surface glabrous or pubescent, hairy adaxially.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, effuse, $2.5-6 \mathrm{~cm}$ long. Primary panicle branches ascending, 1-2 -nate. Panicle branches capillary, glabrous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets orbicular, dorsally compressed, obtuse, $1.3-1.7 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.5 length of spikelet, membranous, without keels, 1-3 -veined. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, acute. Fertile lemma elliptic, dorsally compressed, 1.21.3 mm long, indurate, shiny, without keel, more than 3 -veined. Lemma margins convolute. Lemma apex acute. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province/State. Western Indian Ocean. Aldabra, Madagascar, Seychelles.

Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online.
TYPE from Madagascar. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Madagascar, Vohitra: Perrier 14014.

Illustrations: None found.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms geniculately ascending, 20-25 cm long, rooting from lower nodes. Culm-nodes pubescent. Leaf-sheaths striately veined, pilose, outer margin hairy. Leaf-sheath auricles erect. Ligule a ciliolate membrane. Leaf-blades lanceolate, $2.5-4.5 \mathrm{~cm}$ long, $8-10 \mathrm{~mm}$ wide. Leafblade venation with distinct cross veins. Leaf-blade surface glabrous. Leaf-blade apex acute or acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, lanceolate, loose, $5-8 \mathrm{~cm}$ long. Primary panicle branches appressed, 3 cm long. Panicle axis glabrous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $5-7 \mathrm{~mm}$ long, glabrous, tip widened.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate, dorsally compressed, $1.6-1.8 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes similar, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, 0.6-0.7 mm long, 0.33 length of spikelet, membranous, without keels, 1 -veined. Lower glume lateral veins absent. Lower glume apex obtuse. Upper glume ovate, 1.4 mm long, 0.9 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, oblong or ovate, 1 length of spikelet, membranous, 5 -veined, acute. Fertile lemma ovate, dorsally compressed, $1.3-1.4 \mathrm{~mm}$ long, indurate, pallid, shiny, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province/State. Western Indian Ocean. Madagascar.

TYPE from South Africa. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: South Africa, Ventersdorp district: Louw 1713 (PRE holo).

Illustrations: None found.
Images: F.van Oudtshoorn, Guide to Grasses of Southern Africa (1999).
Derivation (Clifford \& Bostock 2007): L. voluto, tumble about. The mature panicle breaks off a unit and in windy weather tumbles along the ground.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Perennial, caespitose, clumped loosely. Culms erect or geniculately ascending, $50-75 \mathrm{~cm}$ long, without nodal roots or rooting from lower nodes. Ligule a ciliate membrane. Leaf-blades $10-25 \mathrm{~cm}$ long, $5-10 \mathrm{~mm}$ wide. Leaf-blade surface hispid, with tubercle-based hairs.

Inflorescence. Inflorescence a panicle, embraced at base by subtending leaf. Panicle open, obovate, effuse, $20-30 \mathrm{~cm}$ long, with spikelets clustered towards branch tips. Primary panicle branches ascending. Panicle branches stiff. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, acuminate, (5.5-)6-$6.5(-7) \mathrm{mm}$ long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.75 length of spikelet, membranous, without keels, 5 -veined. Lower glume apex acuminate. Upper glume ovate, 1 length of spikelet, membranous, without keels, 7-9 -veined. Upper glume apex acuminate.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 0.75 length of spikelet, membranous, 7 -veined, acute. Fertile lemma elliptic, dorsally compressed, $2.5-3 \mathrm{~mm}$ long, indurate, grey, shiny, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province /State. Southern Africa. Limpopo, North-West, Gauteng, Mpumalanga, Kwazulu-Natal.

Panicum wiehei S.A. Renvoize. Kew Bull., 34(3): 554 (1980).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online.
TYPE from Malawi. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Malawi:Dedza Mountain, 27 Mar 1950, Wiehe N/469 (HT: K).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): in honor of Paul Octavo Wiehe ( -1975 ) who collected in Malawi.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Panicinae.
Habit, Vegetative Morphology. Annual. Culms decumbent or rambling, 30-100 cm long, rooting from lower nodes. Ligule a ciliate membrane. Leaf-blade base simple or cordate. Leaf-blades lanceolate, $6-$ 16 cm long, $8-18 \mathrm{~mm}$ wide, herbaceous or membranous. Leaf-blade surface glabrous or pilose. Leaf-blade margins scabrous. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $7-15 \mathrm{~cm}$ long. Primary panicle branches moderately divided or profusely divided. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, $2-2.5(-3) \mathrm{mm}$ long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.25-0.33$ length of spikelet, membranous, without keels, $0-1$-veined. Lower glume lateral veins absent.

Lower glume apex obtuse or acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface asperulous. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, acute. Fertile lemma oblong, dorsally compressed, 1.52 mm long, indurate, pallid, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province /State. Northeast Tropical Africa, East Tropical Africa, South Tropical Africa. Sudan. Uganda. Malawi, Zambia, Zimbabwe.

Derivation (Clifford \& Bostock 2007): L. brevis, short; folium, leaf. Leaf-blades shorter than those of some other species in the genus or relative to the length of the culm.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Incertae Sedis.
Habit, Vegetative Morphology. Annual. Culms rambling, 15-100 cm long, rooting from lower nodes. Leaf-sheaths outer margin hairy. Ligule a ciliate membrane. Leaf-blade base amplexicaul. Leaf-blades ovate, $5-10 \mathrm{~cm}$ long, $10-25(-38) \mathrm{mm}$ wide, membranous. Leaf-blade venation with distinct cross veins. Leaf-blade surface glabrous or pilose. Leaf-blade apex acute.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $5-16 \mathrm{~cm}$ long. Primary panicle branches spreading. Panicle branches capillary, flexuous or tangled. Spikelets solitary. Fertile spikelets pedicelled, all alike or heteromorphic (peripheral spikelets villous). Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, gibbous, acute, 1.5(-1.8) mm long, falling entire. Rhachilla internodes elongated between glumes.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume oblong, 1 length of spikelet, hyaline, without keels, (1-)3 -veined. Lower glume surface puberulous or pilose. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, herbaceous, without keels, 5 -veined. Upper glume surface puberulous or pilose. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, acute. Fertile lemma oblong, dorsally compressed, 1 mm long, indurate, pallid, shiny, without keel, more than 3-veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. $n=18$ ( 3 refs TROPICOS).
Distribution (TDWG). Continent. Africa, Temperate Asia, Tropical Asia, South America.
Country /Province /State. West Tropical Africa, West-Central Tropical Africa, East Tropical Africa, South Tropical Africa, Southern Africa, Western Indian Ocean. Panicum hirtum sect. Monticolae Lam. Encyc. iv. 74 1. (1798).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from French Guiana. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: J. Martin s.n., French Guiana: Cayenne (P-LA; IT: G, P, US-2907497 (fragm. ex B,P)).

Recent Synonyms: Panicum heterostachyum Hack., Oesterr. Bot. Zeitschr. 1901, 430. (1901).
Illustrations (Books): L.K.A. Chippindall, Grasses and Pastures of South Africa (1955) (327, Fig. 285 as heterostachyum), S.Phillips, Poaceae (Gramineae) in I.Hedberg \& S.Edwards, Flora of Ethiopia and Eritrea (1995) (208, Fig. 86 as P. heterostachyum), A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (279, Fig. 250), J.A.Steyermark et al, Flora of the Venezuelan Guayana Vol. 8 (2004) (200, Fig. 152), E.Judziewicz, Flora of the Guianas, 187. Poaceae (1990) (418, Fig. 74).

Derivation (Clifford \& Bostock 2007): L. hairy. Hairy in part or extensively.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Incertae Sedis.
Habit, Vegetative Morphology. Annual. Culms geniculately ascending or decumbent, 20-80 cm long. Ligule a ciliate membrane. Leaf-blade base amplexicaul. Leaf-blades ovate, $8-12 \mathrm{~cm}$ long, $10-25 \mathrm{~mm}$ wide, membranous. Leaf-blade venation with distinct cross veins. Leaf-blade surface pilose. Leaf-blade apex acute.

Inflorescence. Inflorescence a panicle. Panicle open, oblong or ovate, dense, $7-15 \mathrm{~cm}$ long. Primary panicle branches spreading. Panicle branches capillary, tangled, glandular. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, straight or tilted on the pedicel, dorsally compressed, gibbous, acute, 1.5 mm long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume oblong, 1 length of spikelet, membranous, without keels, 3 -veined. Lower glume surface pubescent or pilose.

Lower glume apex acute. Upper glume ovate, 1 length of spikelet, herbaceous, without keels, 5 -veined. Upper glume surface pubescent or pilose. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, hyaline, 5 -veined, acute. Fertile lemma oblong, dorsally compressed, 1 mm long, indurate, pallid, without keel, more than 3-veined. Lemma surface papillose. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Africa, South America.
Country /Province /State. West Tropical Africa, West-Central Tropical Africa, Northeast Tropical Africa, East Tropical Africa, South Tropical Africa, Southern Africa. Niger. Rwanda. Eritrea, Ethiopia (inc. Eritrea). Kenya, Tanzania, Uganda. Angola, Zambia, Zimbabwe. Namibia, Botswana, Limpopo, Mpumalanga. Illustrations (Journals): Darwiniana (22: 21, Fig. 5 (1979)).
Derivation (Clifford \& Bostock 2007): L. mille, one thousand; granum, grain. Inflorescence of many spikelets.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Incertae Sedis.
Habit, Vegetative Morphology. Perennial. Culms geniculately ascending, 50-100 cm long. Culminternodes distally glabrous or pubescent. Lateral branches sparse. Leaf-sheaths glabrous on surface or pilose, with tubercle-based hairs, outer margin hairy. Leaf-sheath oral hairs pubescent. Ligule an eciliate membrane, 0.3 mm long. Leaf-blade base broadly rounded or cordate, asymmetrical. Leaf-blades ascending or spreading, lanceolate, $4-15 \mathrm{~cm}$ long, $10-30 \mathrm{~mm}$ wide. Leaf-blade surface pubescent, hairy on both sides. Leaf-blade margins glabrous or ciliate, hairy at base.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, $10-20 \mathrm{~cm}$ long, bearing few spikelets, with spikelets clustered towards branch tips. Primary panicle branches ascending or spreading. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, compressed slightly, obtuse, $2-2.3 \mathrm{~mm}$ long, $1-1.2 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes dissimilar, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, 0.66 length of spikelet, membranous, without keels. Lower glume apex acute. Upper glume elliptic, 0.9 length of spikelet, membranous, dark green, without keels, 5 -veined. Upper glume surface papillose, rough on veins, glabrous or hispidulous. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea or without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, dark green, 5 -veined, papillose, rough on veins, glabrous or hispidulous, acute. Fertile lemma elliptic, dorsally compressed, $1.9-2.1 \mathrm{~mm}$ long, 1 mm wide, indurate, dark brown, without keel. Lemma surface papillose. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: G.H. von Langsdorff s.n., Nov. 24, Brazil: Minas Gerais: in rupibus Serra da Lapa (LE-TRIN-0935.01 (\& figs.); IT: US-974673 (fragm. ex LE)).

Illustrations (Books): S.A.Renvoize, The Grasses of Bahia, 1984 (158, Fig. 57).
Derivation (Clifford \& Bostock 2007): L. rupes, rock; -estre, place of growth; Growing amongst rocks.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Incertae Sedis.
Habit, Vegetative Morphology. Perennial. Rhizomes elongated. Culms erect or geniculately ascending, $30-35 \mathrm{~cm}$ long, wiry. Lateral branches ample. Leaves cauline. Ligule a ciliate membrane. Leafblades linear or lanceolate, flat or involute, 3-10 cm long, $1-5 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pilose, sparsely hairy. Leaf-blade apex acute or acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, oblong or ovate, 5-10 cm long. Primary panicle branches moderately divided or profusely divided. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate or orbicular, dorsally compressed, $1.5-2 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.66 length of spikelet, membranous, without keels, 3 -veined. Lower glume surface puberulous. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface puberulous. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, puberulous, acute. Fertile lemma elliptic, dorsally compressed, $1.5-2 \mathrm{~mm}$ long, indurate, pallid, shiny, without keel. Lemma surface smooth. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil Northeast, Brazil Southeast.
Bahia, Minas Gerais, Rio de Janeiro, Espirito Santo. Bahia. Minas Gerais.

Illustrations (Journals): Darwiniana (22: 18, Fig. 4 (1979)).
Derivation (Clifford \& Bostock 2007): in honor of Friedrich Sellow (1789-1831) German botanist.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Incertae Sedis.
Habit, Vegetative Morphology. Perennial, caespitose. Rootstock evident. Culms rambling, 100-150 cm long, $1-2 \mathrm{~mm}$ diam. Culm-internodes distally glabrous or pubescent. Culm-nodes glabrous or pubescent. Lateral branches ample. Leaf-sheaths glabrous on surface or pubescent, outer margin hairy. Leaf-sheath oral hairs ciliate. Ligule an eciliate membrane, $0.2-0.3 \mathrm{~mm}$ long. Collar pilose. Leaf-blade base cordate, asymmetrical. Leaf-blades ovate, $6-12 \mathrm{~cm}$ long, $7-18 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pubescent.

Inflorescence. Inflorescence a panicle. Panicle open, elliptic, effuse, $10-28 \mathrm{~cm}$ long, $4-16 \mathrm{~cm}$ wide. Primary panicle branches ascending or reflexed, $1-2$-nate, simple, $5-14 \mathrm{~cm}$ long. Panicle branches straight. Spikelets appressed, solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, acute, 2-2.3 mm long, falling entire.

Glumes. Glumes dissimilar, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, 1.21.5 mm long, 0.66 length of spikelet, membranous, without keels, 1 -veined. Lower glume lateral veins absent. Lower glume surface pubescent. Lower glume apex acute. Upper glume ovate, 1.8-2 mm long, 0.9 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface pubescent. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, ovate, $1.9-2.2 \mathrm{~mm}$ long, 1 length of spikelet, membranous, 5 -veined, pubescent, acute. Fertile lemma ovate, dorsally compressed, $1.6-1.9 \mathrm{~mm}$ long, indurate, dark brown, without keel. Lemma surface rugulose. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1.1 mm long, purple. Caryopsis ellipsoid, 1.2 mm long.
$2 n=54$ (1 ref TROPICOS).

Derivation (Clifford \& Bostock 2007): Gk. thrix, hair; -oides, resembling. Spikelets sparsely hirsute.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Incertae Sedis.
Habit, Vegetative Morphology. Annual. Culms geniculately ascending or decumbent, slender, 15100 cm long. Leaf-sheaths hispid, outer margin hairy. Ligule a ciliate membrane. Leaf-blade base simple or cordate, asymmetrical. Leaf-blades lanceolate or ovate, $3-7 \mathrm{~cm}$ long, $5-20 \mathrm{~mm}$ wide, membranous. Leafblade surface pilose. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, oblong or ovate, 6-16 cm long. Panicle branches capillary. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, gibbous, obtuse, 1-1.5 mm long, falling entire. Rhachilla internodes elongated between glumes.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.25-0.5$ length of spikelet, membranous, without keels, 1 -veined. Lower glume lateral veins absent. Lower glume surface pubescent. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 3-5 -veined. Upper glume surface pubescent. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 3-5 -veined, pubescent, acute. Fertile lemma
oblong, dorsally compressed, $0.8-1.2 \mathrm{~mm}$ long, indurate, pallid, without keel, more than 3-veined. Lemma surface granulose. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. $2 n=18$ ( 2 refs TROPICOS).
Distribution (TDWG). Continent. Africa, Temperate Asia (*), Tropical Asia (*), Australasia, Pacific, North America, South America.

Panicum verrucosum sect. Monticolae Muhl. Desc. Gram. 113. (1817).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from USA. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Muhlenberg 107, 6, USA (PH; IT: US (fragm. \& photo)).

Illustrations (Books): M.E.Barkworth et al, Flora of North America north of Mexico Vol 25 Poaceae, part 2 (2003) (489), F.W.Gould, The Grasses of Texas (1975) (451, Fig. 239).

Derivation (Clifford \& Bostock 2007): L. verruca, wart; -osa, abundance. Glumes with warty protruberances.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Incertae Sedis.
Habit, Vegetative Morphology. Annual. Culms erect or geniculately ascending or decumbent, 50-120 cm long. Lateral branches sparse or ample. Leaf-sheaths glabrous on surface, outer margin hairy. Ligule a fringe of hairs, 0.3 mm long. Leaf-blades $5-20 \mathrm{~cm}$ long, $4-10 \mathrm{~mm}$ wide, flaccid, light green. Leaf-blade surface glabrous.

Inflorescence. Inflorescence a panicle. Panicle open, ovate, effuse, $5-30 \mathrm{~cm}$ long, bearing few spikelets, with spikelets clustered towards branch tips. Primary panicle branches spreading, $1-3 \mathrm{~cm}$ long. Panicle branches stiff. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or obovate, dorsally compressed, 1.7-2.1 mm long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.2-0.25$ length of spikelet, membranous, without keels, 1 -veined. Lower glume lateral veins absent. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface tuberculate. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, tuberculate, acute. Fertile lemma ovate, dorsally compressed, $1.5-2 \mathrm{~mm}$ long, indurate, without keel. Lemma surface reticulate. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3.
Distribution (TDWG). Continent. North America.
Country /Province/State. Northeast USA, South-central USA, Southeastern USA. Indiana, Maine, Massachusetts, Michigan, New Hampshire. Texas. Alabama, Arkansas, Delaware, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, District of Columbia.

Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Mexico. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: IT: Karwinsky 1483, Mexico (US-899499 (fragm. ex LE)).

Illustrations (Books): M.E.Barkworth et al, Flora of North America north of Mexico Vol 25 Poaceae, part 2 (2003) (288), F.W.Gould, The Grasses of Texas (1975) (379, Fig. 200).

Derivation (Clifford \& Bostock 2007): L. bis, twice; color, color. Two-colored, usually with respect to spikelets or florets.

Classification. Subfamily Chloridoideae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect or geniculately ascending, 30-80($100) \mathrm{cm}$ long. Leaf-sheath oral hairs bearded. Ligule a fringe of hairs. Leaf-blades flat or involute, 10-20($30) \mathrm{cm}$ long, $1.5-5 \mathrm{~mm}$ wide. Leaf-blade surface scabrous, rough adaxially, glabrous.

Inflorescence. Inflorescence a panicle. Panicle contracted, lanceolate, $12-20 \mathrm{~cm}$ long. Primary panicle branches $1-4 \mathrm{~cm}$ long. Spikelets appressed, solitary. Fertile spikelets pedicelled. Pedicels present, $1-5 \mathrm{~mm}$ long.

Fertile Spikelets. Spikelets comprising 2-3 fertile florets, with diminished florets at the apex. Spikelets of 2 or more fertile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets ovate, laterally compressed, $6-8 \mathrm{~mm}$ long, breaking up at maturity, disarticulating above glumes but not between florets. Floret callus pilose.

Glumes. Glumes persistent, similar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $3-4 \mathrm{~mm}$ long, 1 length of upper glume, membranous, 1 -keeled, 1 -veined. Lower glume lateral veins absent. Lower glume apex acute. Upper glume ovate, 3-4 mm long, 1 length of adjacent fertile lemma, membranous, 1 -keeled, 1 -veined. Upper glume lateral veins absent. Upper glume apex acute.

Florets. Fertile lemma oblong, 3-4 mm long, chartaceous, red (pink), without keel, 11-15 -veined, more than 3 -veined. Lemma midvein pubescent, hairy below. Lemma margins pubescent, hairy below. Lemma apex awned, 11-15 -awned. Principal lemma awn $2.5-5 \mathrm{~mm}$ long overall, limb scaberulous. Lateral lemma awns present, of irregular length. Palea 1.1 length of lemma, 2 -veined. Palea keels ciliolate. Palea apex acuminate. Apical sterile florets distinct from fertile, 2 in number, barren, in a clump, oblong. Apical sterile lemmas awned, 11-15-awned.

Flower and Fruit. $n=50$ ( 1 ref TROPICOS).
Distribution (TDWG). Continent. North America.
Country /Province/State. South-central USA, Mexico. Texas. Central Mexico, Northeast Mexico, Gulf (Mexico), Southwest Mexico.

Mexico State. Coahuila, Chihuahua, Durango, Guanajuato, Neuvo Leon, San Luis Potosi, Tamaulipas. Veracruz. Guerrero.

TYPE from Argentina. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: IT: R.E. Fries 804, 20 Nov 1901, Argentina: Jujuy (US-1162325).

Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 1, Aristidoideae a Pharoideae (2012) (159), S.A.Renvoize, Gramineas de Bolivia (1998) (287, Fig 58), E.G.Nicora, Los

Generos de Gramineas de America Austral (1987) (353, Fig. 121), M.N.Correa, Flora Patagonica Parte III, Gramineae (1978) (491, Fig 332).

Derivation (Clifford \& Bostock 2007): L. caespes, grass that has been cut; -osa, abundance. Habit tufted.

Classification. Subfamily Chloridoideae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms 6-80 cm long. Leaf-sheaths glabrous on surface. Leaf-sheath oral hairs bearded. Ligule a fringe of hairs, $1.5-3 \mathrm{~mm}$ long. Leaf-blades convolute, $5-$ 25 cm long, 3-4 mm wide, stiff. Leaf-blade surface scabrous, rough adaxially, glabrous. Leaf-blade apex pungent.

Inflorescence. Inflorescence a panicle. Panicle spiciform, linear, 4-18(-30) cm long, 1 cm wide. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1-2 fertile florets, with diminished florets at the apex. Spikelets of 1 fertile floret with or without additional sterile florets, or of 2 or more fertile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets ovate, laterally compressed, $3.5-4.5 \mathrm{~mm}$ long, breaking up at maturity, disarticulating above glumes but not between florets. Floret callus pilose.

Glumes. Glumes persistent, similar, exceeding apex of florets, thinner than fertile lemma. Lower glume ovate, 3 mm long, $0.66-0.8$ length of upper glume, membranous, 1 -keeled, 1 -veined. Lower glume lateral veins absent. Lower glume apex acute, mucronate. Upper glume ovate, $3.5-4.5 \mathrm{~mm}$ long, 1.8 length of adjacent fertile lemma, membranous, 1-keeled, 1 -veined. Upper glume lateral veins absent. Upper glume apex acute, mucronate.

Florets. Fertile lemma oblong, $2-2.5 \mathrm{~mm}$ long, coriaceous, without keel, 7 -veined, more than 3 -veined. Lemma midvein ciliate. Lemma inner surface glabrous. Lemma margins ciliate. Lemma apex awned, 2022 -awned. Principal lemma awn 3.5-5.3 mm long overall. Lateral lemma awns present, of irregular length. Palea keels scaberulous. Apical sterile florets 2-4 in number, barren, in a clump, rudimentary. Apical sterile lemmas awned, 20-22 -awned.

Flower and Fruit. Anthers 3, 0.4-0.5 mm long. Caryopsis 2 mm long. Embryo 0.4 length of caryopsis. Hilum punctiform.

Distribution (TDWG). Continent. South America.
Country /Province/State. Western South America, Southern South America. Bolivia. Argentina South, Argentina Northwest, Paraguay.

Derivation (Clifford \& Bostock 2007): in honor of Antonia Krapovickas (fl. 1957-1963) who collected in Argentina.

Classification. Subfamily Chloridoideae. Tribe: Cynodonteae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect or geniculately ascending, 40-120 cm long. Lateral branches lacking. Leaf-sheaths glabrous on surface to pubescent. Ligule a fringe of hairs, $1-3 \mathrm{~mm}$ long. Leaf-blades flat or convolute, $10-30 \mathrm{~cm}$ long, $1.5-6 \mathrm{~mm}$ wide. Leaf-blade surface scabrous, rough adaxially, glabrous to pubescent.

Inflorescence. Inflorescence a panicle. Panicle spiciform, linear, continuous or interrupted, 20-40 cm long, $1.5-3 \mathrm{~cm}$ wide. Panicle axis scabrous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Sterile Spikelets. Apical sterile spikelets absent or barren.
Fertile Spikelets. Spikelets comprising 1-2 fertile florets, with diminished florets at the apex. Spikelets of 1 fertile floret with or without additional sterile florets, or of 2 or more fertile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets ovate, laterally compressed, $10-12 \mathrm{~mm}$ long, $1-2 \mathrm{~mm}$ wide, breaking up at maturity, disarticulating above glumes but not between florets.

Glumes. Glumes persistent, similar, exceeding apex of florets, thinner than fertile lemma. Lower glume ovate, 4-7 mm long, 0.9 length of upper glume, hyaline, 1 -keeled, 1 -veined. Lower glume lateral veins absent. Lower glume apex acute, awned, 1 -awned, awn $0.5-1 \mathrm{~mm}$ long. Upper glume ovate, $4-7 \mathrm{~mm}$ long, 2 length of adjacent fertile lemma, hyaline, 1 -keeled, 1 -veined. Upper glume lateral veins absent. Upper glume apex acute, awned, 1 -awned, awn $0.5-1 \mathrm{~mm}$ long.

Florets. Fertile lemma oblong, $2-2.5 \mathrm{~mm}$ long, coriaceous, without keel, 7-9 -veined, more than 3veined. Lemma surface pubescent, inner surface pubescent. Lemma apex awned, 19-26 -awned. Principal lemma awn 6-9 mm long overall. Lateral lemma awns present, of irregular length. Palea 2-2.3 mm long. Apical sterile florets 3-4 in number, barren, in a clump, elliptic. Apical sterile lemmas awned, 19-26awned.

Flower and Fruit. Anthers 3, 1 mm long. Caryopsis with adherent pericarp, ovoid, sulcate on hilar side, $1.4-2 \mathrm{~mm}$ long, dark brown. Embryo 0.5 length of caryopsis. Hilum punctiform.

Distribution (TDWG). Continent. South America.
Country /Province /State. Western South America, Brazil, Southern South America. Bolivia, Colombia. Brazil Northeast. Uruguay.

Bahia. Catamarca, La Rioja, Salta. Cordoba, Corrientes, Formosa.

Pappophorum macrospermum Roseng., B.R. Arrill. \& Izag. Gramin. Urug. 397, f. 178 (1970).
TYPE from Uruguay. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Uruguay: Rivera: ruta 30 entre Bajada de Pena y A. Rubio Chico, 7 Feb 1966, Del Puerto \& Marchesi 6080 (HT: MFVA).

Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3-1, Aristidoideae a Pharoideae (2012) (161), B.Rosengurtt, Gramineas UruguayasI (1970) (398, Fig. 178).

Derivation (Clifford \& Bostock 2007): Gk. makros, large; sperma, seed. Grains large.
Classification. Subfamily Chloridoideae. Tribe: Cynodonteae.
Habit, Vegetative Morphology. Perennial, caespitose. Basal innovations intravaginal. Culms erect, $50-90 \mathrm{~cm}$ long. Leaf-sheath oral hairs bearded, deciduous, $2-3.5 \mathrm{~mm}$ long. Ligule a fringe of hairs, 0.6 mm long. Leaf-blades $10-25 \mathrm{~cm}$ long, $2.5-4 \mathrm{~mm}$ wide. Leaf-blade surface glabrous. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle contracted, linear or oblong, interrupted, $12-20 \mathrm{~cm}$ long, 1.5 cm wide. Panicle branches scaberulous, glabrous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $0.5-4 \mathrm{~mm}$ long, scaberulous, glabrous.

Fertile Spikelets. Spikelets comprising 2 fertile florets, with diminished florets at the apex. Spikelets of 2 or more fertile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets ovate, laterally compressed, $7.5-10 \mathrm{~mm}$ long, breaking up at maturity, disarticulating above glumes but not between florets. Floret callus $0.7-0.8 \mathrm{~mm}$ long, pubescent.

Glumes. Glumes persistent, similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate, $7.5-10 \mathrm{~mm}$ long, 1 length of upper glume, chartaceous, 1 -keeled, 1 -veined. Lower glume lateral veins absent. Lower glume apex entire or dentate, 2 -fid, acuminate, muticous or mucronate. Upper glume lanceolate, $7.5-10 \mathrm{~mm}$ long, 2.5-3 length of adjacent fertile lemma, chartaceous, 1 -keeled, 1 veined. Upper glume lateral veins absent. Upper glume apex entire or dentate, 2 -fid, acuminate, muticous or mucronate.

Florets. Fertile lemma oblong, 3-3.5 mm long, coriaceous, without keel, 7-11 -veined, more than 3veined. Lemma midvein ciliate. Lemma inner surface glabrous. Lemma margins pubescent. Lemma hairs $0.8-1.1 \mathrm{~mm}$ long. Lemma apex awned, 17-19 -awned. Principal lemma awn $8-10 \mathrm{~mm}$ long overall. Lateral lemma awns present, of irregular length. Palea $3.8-4.5 \mathrm{~mm}$ long. Palea keels $1.5-1.7 \mathrm{~mm}$ apart, ciliate, with hairs $0.6-0.8 \mathrm{~mm}$ long. Apical sterile florets 3-4 in number, barren, in a clump, rudimentary. Apical sterile lemmas awned, 13-17-awned.

Flower and Fruit. Anthers 3, 1.5 mm long, yellow. Stigmas purple. Caryopsis with adherent pericarp, ellipsoid or ovoid, sulcate on hilar side, 2.3-2.6 mm long. Embryo 0.33 length of caryopsis. Hilum elliptic.

Distribution (TDWG). Continent. South America.
Country /Province/State. Brazil, Southern South America. Argentina Northeast, Uruguay.
Corrientes.

Anton, Flora Argentina 3 - 1, Aristidoideae a Pharoideae (2012) (161), A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (60, Fig. 33), S.A.Renvoize, Gramineas de Bolivia (1998) (287, Fig 58), S.A.Renvoize, The Grasses of Bahia, 1984 (58, Fig. 20), J.A.Steyermark et al, Flora of the Venezuelan Guayana Vol. 8 (2004) (209, Fig. 163), A.Burkat, Flora Ilustrada de Entre Rios (Argentina), Pt II, Gramineas (1969) (206, Fig 74), G.Harling \& C.Persson, Flora of Ecuador (2006) (68: 5, Fig. 1 (2001)).

Derivation (Clifford \& Bostock 2007): Gk. pappos, grandfather; L. fero, bear. Lemma apices bearded, terminating in about thirteen slender awns.

Classification. Subfamily Chloridoideae. Tribe: Cynodonteae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms robust, 90-155(-200) cm long. Ligule a fringe of hairs. Leaf-blades persistent or deciduous at the ligule, flat or convolute, 25-60 cm long, 3-7 mm wide. Leaf-blade apex filiform.

Inflorescence. Inflorescence a panicle, embraced at base by subtending leaf. Panicle contracted, lanceolate, 23-60 cm long, 2-10 cm wide. Primary panicle branches appressed or ascending, 5-13 cm long. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 fertile florets, with diminished florets at the apex. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets ovate, laterally compressed, $3-5.5 \mathrm{~mm}$ long, breaking up at maturity, disarticulating above glumes but not between florets.

Glumes. Glumes persistent, similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate, $3-5 \mathrm{~mm}$ long, 1 length of upper glume, hyaline, 1 -keeled, 1 -veined. Lower glume lateral veins absent. Lower glume apex acute. Upper glume lanceolate, $3-5.5 \mathrm{~mm}$ long, 2 length of adjacent fertile lemma, hyaline, 1 -keeled, 1 -veined. Upper glume lateral veins absent. Upper glume apex acute.

Florets. Fertile lemma oblong, $1.5-2.5 \mathrm{~mm}$ long, coriaceous, without keel, 5 -veined, more than 3veined. Lemma midvein ciliate. Lemma margins ciliate. Lemma apex awned, 12-15 -awned. Principal
lemma awn 5-9 mm long overall, 2.5-3 length of lemma. Lateral lemma awns present, of irregular length. Apical sterile florets 2 in number, barren, in a clump, rudimentary. Apical sterile lemmas awned, 12-15awned.

Flower and Fruit. Caryopsis ovoid, 1.8 mm long.
Distribution (TDWG). Continent. North America, South America.
Country /Province /State. Mexico. Northeast Mexico, Gulf (Mexico), Southwest Mexico. Caribbean, Northern South America, Western South America, Brazil, Southern South America. Cuba, Leeward Is, Windward Islands, Puerto Rico, Trinidad-Tobago, Venezuelan and Netherlands Antilles. Guyana, Venezuela. Bolivia, Colombia, Ecuador, Peru. Brazil Northeast. Argentina Northeast, Argentina Northwest, Paraguay.

Bahia. Bahia. Catamarca, Jujuy, Mendoza, Salta, Santiago del Estero, San Luis, Tucuman. Buenos Aires, Chaco, Cordoba, Corrientes, Distrito Federal, Entre Rios, Formosa, La Pampa, Santa Fe. Coahuila. Veracruz. Nayarit, Oaxaca.

Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Argentina. Basionym or Replaced Name: Pappophorum vaginatum Phil., Anales Univ. Chile 36: 206 (1870). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Anon., Mendoza (SGO; IT: B, BAA-2025 (fragm. ex B), SGO-45800, SGO-37102, US-1939964 (fragm. ex SGO45800 \& photo)).

Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 1, Aristidoideae a Pharoideae (2012) (162), S.A.Renvoize, Gramineas de Bolivia (1998) (287, Fig 58), M.N.Correa, Flora Patagonica Parte III, Gramineae (1978) (485, Fig 327).

Derivation (Clifford \& Bostock 2007): L. -ana, indicating connection. In honor of Rudolf Amandus Philippi (1808-1904) German-born Chilian biologist and museum director.

Classification. Subfamily Chloridoideae. Tribe: Cynodonteae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths pubescent. Culms 30-45 cm long. Leaf-sheaths pubescent, outer margin hairy. Ligule a fringe of hairs. Leaf-blades convolute, $8-15 \mathrm{~cm}$ long, $1-2 \mathrm{~mm}$ wide, flaccid.

Inflorescence. Inflorescence a panicle. Panicle spiciform, linear, $4-10 \mathrm{~cm}$ long. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 2-4 fertile florets, with diminished florets at the apex. Spikelets of 2 or more fertile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets ovate, laterally compressed, $10-12 \mathrm{~mm}$ long, breaking up at maturity, disarticulating above glumes but not between florets.

Glumes. Glumes persistent, similar, exceeding apex of florets, thinner than fertile lemma. Lower glume elliptic, 7 mm long, $0.6-0.9$ length of upper glume, hyaline, 1 -keeled, 1 -veined. Lower glume lateral veins absent. Lower glume apex acute. Upper glume elliptic, $8-11 \mathrm{~mm}$ long, 2 length of adjacent fertile lemma, hyaline, 1-keeled, 1 -veined. Upper glume lateral veins absent. Upper glume apex acute.

Florets. Fertile lemma oblong, $4-5 \mathrm{~mm}$ long, coriaceous, without keel, $7-9$-veined, more than 3veined. Lemma midvein ciliate. Lemma inner surface pubescent. Lemma margins ciliate. Lemma hairs 2-4 mm long. Lemma apex awned, 11-14-awned. Principal lemma awn 3-10 mm long overall. Lateral lemma awns present, of irregular length. Apical sterile florets 2 in number, barren, in a clump, elliptic, 1.5 mm long. Apical sterile lemmas awned, 11-14-awned.

## Pappostipa ameghinoi (Speg.) Romaschenko. J. Bot. Res. Inst. Texas 2: 184 (2008).

Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online (as Stipa), U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Argentina. Basionym or Replaced Name: Stipa ameghinoi Speg., Anal. Mus. Montevid. 4. tt. 163 (1901). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Argentina, Golfo San Jarge: Ameghino (LP holo).

Recent Synonyms: Jarava ameghinoi (Speg.) Penail., Gayana, Bot. 59(1): 30 (2002).
Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 2 Pooideae (2012) (457), M.N.Correa, Flora Patagonica Parte III, Gramineae (1978) (302, Fig 197 as Stipa).

Derivation (Clifford \& Bostock 2007): in honor of Carlos Ameghino (1865-1936) botanical collector in Patagonia and Argentina.

Classification. Subfamily Pooideae. Tribe: Stipeae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths purple. Culms erect, $10-25 \mathrm{~cm}$ long, $0.5-0.7 \mathrm{~mm}$ diam., 2-3 -noded. Culm-internodes smooth, distally glabrous or pubescent. Culm-nodes constricted, glabrous. Leaf-sheaths mostly shorter than adjacent culm internode, smooth, glabrous on surface. Leaf-sheath oral hairs lacking or pubescent. Ligule a ciliolate membrane, 1 mm long. Leaf-blades straight or curved, conduplicate, $2-8 \mathrm{~cm}$ long, $0.4-0.7 \mathrm{~mm}$ wide. Leaf-blade surface smooth, glabrous. Leaf-blade apex pungent.

Inflorescence. Inflorescence a panicle, comprising 6-10 fertile spikelets, embraced at base by subtending leaf. Panicle open, oblong, $3-5 \mathrm{~cm}$ long, $1-1.5 \mathrm{~cm}$ wide, bearing few spikelets. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $3-5 \mathrm{~mm}$ long, ciliate, hairy above.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets lanceolate, subterete, $17-24 \mathrm{~mm}$ long, breaking up at maturity, disarticulating below each fertile floret. Floret callus evident, curved, pubescent, pungent.

Glumes. Glumes persistent, similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate, $17-24 \mathrm{~mm}$ long, 1.05 length of upper glume, membranous, without keels, 3 -veined. Lower glume apex acuminate. Upper glume lanceolate, $16-23 \mathrm{~mm}$ long, membranous, without keels, 3 veined. Upper glume apex acuminate.

Florets. Fertile lemma lanceolate, subterete, 7-7.5 mm long, coriaceous, without keel, 5 -veined, more than 3 -veined. Lemma surface pilose, hairy below. Lemma margins convolute, covering most of palea. Lemma hairs $1-3 \mathrm{~mm}$ long. Lemma apex dentate, 2 -fid, with lobes 1 mm long, awned, 1 -awned. Principal lemma awn from a sinus, geniculate, $25-35 \mathrm{~mm}$ long overall, with twisted column. Column of lemma awn 9-12 mm long, plumose. Palea $5-5.5 \mathrm{~mm}$ long, 2 -veined, without keels. Palea surface pilose.

Flower and Fruit. Lodicules 3. Anthers 3, yellow, anther tip smooth. Stigmas 2. Ovary glabrous. Caryopsis with adherent pericarp, fusiform. Hilum linear.

Distribution (TDWG). Continent. South America.
Country /Province /State. Southern South America. Argentina South.
Mendoza. Chubut, Neuquén, Santa Cruz.

## Pappostipa arenicola (F.A.Roig) Ciald. Darwiniana 48 (2):170 (2010).

TYPE from Argentina. Basionym or Replaced Name: Stipa arenicola F.A. Roig, Hickenia 2(55): 257 (1998). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Argentina, Lago Argentino: Roig et al. 14624 (MERL holo, LP, SI).

Recent Synonyms: Jarava arenicola (F.A.Roig) Penail., Contr. U. S. Natl. Herb. 48: 403 (2003).
Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 2 Pooideae (2012) (458).

Derivation (Clifford \& Bostock 2007): L. arena, sandy place; -cola, dweller. Species of sandy habitats.
Classification. Subfamily Pooideae. Tribe: Stipeae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths purple. Culms erect, $15-25 \mathrm{~cm}$ long, $1-1.5 \mathrm{~mm}$ diam., 5-8 -noded. Culm-internodes $10-25 \mathrm{~cm}$ long, smooth. Lateral branches ample. Leaf-sheaths striately veined, glabrous on surface, outer margin hairy. Ligule an eciliate membrane, 7-12 mm long, $2-3 \mathrm{~mm}$ long on basal shoots, hyaline. Collar pubescent. Leaf-blades filiform, conduplicate, 1529 cm long, $0.5-1 \mathrm{~mm}$ wide. Leaf-blade surface smooth, glabrous. Leaf-blade apex attenuate.

Inflorescence. Inflorescence a panicle, comprising 11-12 fertile spikelets, shorter than basal leaves, embraced at base by subtending leaf. Panicle open, lanceolate to elliptic, $9-14 \mathrm{~cm}$ long, bearing few spikelets. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, angular, ciliate, hairy at tip.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets lanceolate, subterete, $25-31 \mathrm{~mm}$ long, breaking up at maturity, disarticulating below each fertile floret. Floret callus elongated, curved, $2.8-3 \mathrm{~mm}$ long, acute.

Glumes. Glumes similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate, $25-31 \mathrm{~mm}$ long, 1.1-1.2 length of upper glume, hyaline, without keels, 1 -veined. Lower glume lateral veins absent. Lower glume apex attenuate. Upper glume lanceolate, $22-27 \mathrm{~mm}$ long, 2 length of adjacent fertile lemma, hyaline, without keels. Upper glume apex attenuate.

Florets. Fertile lemma lanceolate, subterete, 11-13 mm long, coriaceous, without keel, 5 -veined, more than 3 -veined. Lemma surface pubescent. Lemma margins convolute, covering most of palea. Lemma apex surmounted by a ring of hairs, awned, 1 -awned. Principal lemma awn geniculate, $70-80 \mathrm{~mm}$ long overall, with 54-62 mm long limb, with twisted column. Column of lemma awn $16-20 \mathrm{~mm}$ long, plumose. Palea tightly convolute around flower, $9.5-10 \mathrm{~mm}$ long, 2 -veined, 2-keeled. Palea keels ciliolate.

Flower and Fruit. Lodicules 2, 3.5-4 mm long. Stigmas 2. Caryopsis with adherent pericarp, fusiform, $9-10 \mathrm{~mm}$ long. Hilum linear.

Distribution (TDWG). Continent. South America.
Country /Province /State. Southern South America. Argentina South.
Santa Cruz.

Derivation (Clifford \& Bostock 2007): L. -ensis, denoting origin. From Barranca, Argentina.
Classification. Subfamily Pooideae. Tribe: Stipeae.
Habit, Vegetative Morphology. Perennial, caespitose. Rhizomes short. Butt sheaths red. Culms erect or geniculately ascending, $50-60 \mathrm{~cm}$ long, $1-1.5 \mathrm{~mm}$ diam., 2-3 -noded. Culm-nodes swollen, brown, glabrous. Leaf-sheaths scaberulous, glabrous on surface or pubescent, outer margin glabrous or hairy. Ligule an eciliate membrane, 5 mm long, 1 mm long on basal shoots, acute. Leaf-blades curved, conduplicate, $15-25 \mathrm{~cm}$ long, 1 mm wide, stiff. Leaf-blade surface glabrous. Leaf-blade apex acuminate, muticous or pungent.

Inflorescence. Inflorescence a panicle, comprising 10-25 fertile spikelets. Panicle open, oblong, 15-25 cm long. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $7-15 \mathrm{~mm}$ long, pubescent.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets lanceolate, subterete, $37-45 \mathrm{~mm}$ long, breaking up at maturity, disarticulating below each fertile floret. Floret callus elongated, curved, $2.5-3 \mathrm{~mm}$ long, pungent.

Glumes. Glumes persistent, similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate, 37-45 mm long, 1.1 length of upper glume, membranous, without keels, 3 -veined.

Lower glume apex attenuate. Upper glume lanceolate, 32-41 mm long, membranous, without keels, 3 veined. Upper glume apex attenuate.

Florets. Fertile lemma lanceolate, subterete, $12-14 \mathrm{~mm}$ long, coriaceous, without keel, 5 -veined, more than 3-veined. Lemma surface pubescent, hairy below. Lemma margins convolute, covering most of palea. Lemma apex awned, 1 -awned. Principal lemma awn geniculate, $130-190 \mathrm{~mm}$ long overall, with twisted column. Column of lemma awn 12-23 mm long, plumose, with 10 mm long hairs. Palea 0.5 length of lemma, 0 -veined, without keels.

Flower and Fruit. Lodicules 3. Anthers 3, anther tip smooth. Stigmas 2. Ovary glabrous. Caryopsis with adherent pericarp, fusiform. Hilum linear.

Distribution (TDWG). Continent. South America.
Country /Province /State. Southern South America. Argentina South.
Mendoza. La Pampa. Neuquén.

Pappostipa braun-blanquetii (F.A.Roig) Romaschenko. J. Bot. Res. Inst. Texas 2: 183 (2008).

TYPE from Chile. Basionym or Replaced Name: Stipa chrysophylla E.Desv., C. Gay, Fl. Chil. 6: 278. t. 76. f. 2 (1853). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Chile, Guanta: Gay ; Chile, Coquimbo: Gay 376 (P syn, K, US).

Recent Synonyms: Jarava chrysophylla (E.Desv.) Penail., Gayana, Bot. 59(1): 31 (2002).
Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 2 Pooideae (2012) (462), M.N.Correa, Flora Patagonica Parte III, Gramineae (1978) (308, Fig 204 as Stipa).

Illustrations (Journals): Ruizia (13:70, Fig 8a (1993) as Stipa).
Derivation (Clifford \& Bostock 2007): Gk. chrysos, yellow; phyllon, leaf. Leaf-blades golden-yellow.
Classification. Subfamily Pooideae. Tribe: Stipeae.
Habit, Vegetative Morphology. Perennial, caespitose. Stolons present. Butt sheaths yellow, glabrous or pubescent. Culms erect or geniculately ascending, 15-40 cm long, 2-4 -noded. Culm-internodes distally glabrous or pubescent. Culm-nodes glabrous. Ligule an eciliate membrane, 5 mm long. Leaf-blades filiform, conduplicate, $10-30 \mathrm{~cm}$ long, 0.5 mm wide. Leaf-blade surface scaberulous, glabrous.

Inflorescence. Inflorescence a panicle, comprising 10-20 fertile spikelets. Panicle open, linear, dense, $6-9 \mathrm{~cm}$ long, $0.5-1 \mathrm{~cm}$ wide. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $5-10 \mathrm{~mm}$ long, scabrous, ciliate, hairy at tip.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets lanceolate, subterete, $14-29 \mathrm{~mm}$ long, breaking up at maturity, disarticulating below each fertile floret. Floret callus evident, curved, $1.5-2 \mathrm{~mm}$ long, pubescent, pungent.

Glumes. Glumes persistent, similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate, 14-29 mm long, 1.05 length of upper glume, membranous, 1 -keeled, 3 -veined. Lower glume apex acuminate. Upper glume lanceolate, $13-28 \mathrm{~mm}$ long, membranous, without keels, 3 -veined. Upper glume apex acuminate.

Florets. Fertile lemma lanceolate, subterete, $6-11 \mathrm{~mm}$ long, coriaceous, without keel, 5 -veined, more than 3-veined. Lemma surface pubescent, hairy all along or below. Lemma margins convolute, covering most of palea. Lemma apex dentate, 2 -fid, awned, 1 -awned. Principal lemma awn from a sinus, geniculate, $25-60 \mathrm{~mm}$ long overall, with twisted column. Column of lemma awn $10-22 \mathrm{~mm}$ long, plumose, hairy generally, with 5-10 mm long hairs. Palea 5-6 mm long, without keels. Palea surface pubescent.

Flower and Fruit. Lodicules 3. Anthers 3, yellow, anther tip smooth. Stigmas 2. Ovary glabrous. Caryopsis with adherent pericarp, fusiform, 6-7 mm long. Hilum linear.

Distribution (TDWG). Continent. South America.
Country /Province /State. Western South America, Southern South America. Peru. Argentina South, Chile North, Chile Central.

Catamarca, La Rioja, Mendoza, Salta, San Juan. La Pampa. Chubut, Neuquén, Río Negro, Santa Cruz, Tierra del Fuego. Rest of Chile- Biobio, La Auracania, Maule, O'Higgins, Santado, Valpariso. Tarapaca, Antofagasta, Atacama. Coquimbo, Valparaiso, Santiago, O’Higgins, Maule, La Araucania.

Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online (as Stipa), U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Argentina. Basionym or Replaced Name: Stipa chubutensis Speg., AnaI. Mus. Montevid. 4: II. 49 (1901). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Argentina, Chubut Teka Choque: Mauri (BAA holo, K, US).

Recent Synonyms: Jarava chubutensis (Speg.) Penail., Gayana, Bot. 59(1): 31 (2002).

Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 2 Pooideae (2012) (463), M.N.Correa, Flora Patagonica Parte III, Gramineae (1978) (302, Fig 194 as Stipa).

Derivation (Clifford \& Bostock 2007): L. -ensis, denoting origin. From Chubut, Argentina.
Classification. Subfamily Pooideae. Tribe: Stipeae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths dark brown. Culms 15-35 cm long, 2-3 -noded. Culm-nodes swollen. Leaf-sheaths mostly shorter than adjacent culm internode. Leaf-sheath oral hairs ciliate, 1.5 mm long. Ligule a ciliolate membrane. Leaf-blades straight or curved, deciduous at the ligule, filiform, conduplicate, $8-20 \mathrm{~cm}$ long, 1 mm wide. Leaf-blade surface smooth. Leaf-blade apex muticous or pungent.

Inflorescence. Inflorescence a panicle, embraced at base by subtending leaf. Panicle open, oblong, dense, $5-11 \mathrm{~cm}$ long, $2-3 \mathrm{~cm}$ wide. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, scabrous, ciliate, hairy at tip.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets lanceolate, subterete, $17-24 \mathrm{~mm}$ long, breaking up at maturity, disarticulating below each fertile floret. Floret callus elongated, curved, $1.5-2 \mathrm{~mm}$ long, pilose, acute.

Glumes. Glumes persistent, similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate, 17-24 mm long, 1 length of upper glume, membranous, without keels, 3 -veined. Lower glume apex acuminate. Upper glume lanceolate, 17-24 mm long, membranous, without keels, 3 -veined. Upper glume apex acuminate.

Florets. Fertile lemma lanceolate, subterete, $7-9 \mathrm{~mm}$ long, coriaceous, without keel, 5 -veined, more than 3 -veined. Lemma surface pilose. Lemma margins convolute, covering most of palea. Lemma apex dentate, 2 -fid, awned, 1 -awned. Principal lemma awn from a sinus, geniculate, 27-50 mm long overall, with twisted column. Column of lemma awn 9-13 mm long, pubescent. Palea 5-6 mm long, 2 -veined, without keels. Palea surface pilose.

Flower and Fruit. Lodicules 3. Anthers 3. Stigmas 2. Ovary glabrous. Caryopsis with adherent pericarp, fusiform, 6 mm long. Hilum linear.

Distribution (TDWG). Continent. South America.
Country /Province /State. Southern South America. Argentina South.
Mendoza. Chubut, Neuquén, Santa Cruz.

## Pappostipa colloncurensis (F.A.Roig) Ciald. Darwiniana 48 (2):171 (2010).

TYPE from Chile. Basionym or Replaced Name: Stipa frigida Phil., Fl. Atac. 54 (1860). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Chile, Altos de Puquios: Philippi (SGO holo). Recent Synonyms: Jarava frigida (Phil.) F.Rojas, Gayana, Bot. 54(2): 173 (1998).
Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 2 Pooideae (2012) (464).

Derivation (Clifford \& Bostock 2007): L. cold. Growing at high altitudes.
Classification. Subfamily Pooideae. Tribe: Stipeae.
Habit, Vegetative Morphology. Perennial, caespitose, clumped densely. Culms erect, 15-30 cm long, 2 -noded. Ligule an eciliate membrane, $3-5 \mathrm{~mm}$ long, pubescent on abaxial surface. Leaf-blades filiform, convolute, $5-20 \mathrm{~cm}$ long, 0.5 mm wide. Leaf-blade surface ribbed, glabrous.

Inflorescence. Inflorescence a panicle, shorter than basal leaves. Panicle open, linear, 2-6 cm long. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets lanceolate, subterete, $16-24 \mathrm{~mm}$ long, breaking up at maturity, disarticulating below each fertile floret. Floret callus evident, 1 mm long, acute.

Glumes. Glumes persistent, similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate, 1 length of upper glume, membranous, without keels, 3 -veined. Lower glume apex acuminate. Upper glume lanceolate, 16-24 mm long, membranous, without keels, 3 -veined. Upper glume apex acuminate.

Florets. Fertile lemma lanceolate, subterete, $5-8 \mathrm{~mm}$ long, coriaceous, without keel, 5 -veined, more than 3 -veined. Lemma surface pubescent, hairy all along. Lemma margins convolute, covering most of palea. Lemma apex dentate, 2 -fid, awned, 1 -awned. Principal lemma awn geniculate, 12-20 mm long overall, with twisted column. Column of lemma awn $7-10 \mathrm{~mm}$ long, plumose, with $5-6 \mathrm{~mm}$ long hairs. Palea $4-7 \mathrm{~mm}$ long, 1 length of lemma, 2 -veined, without keels. Palea surface pubescent.

Flower and Fruit. Lodicules 3, $2-3 \mathrm{~mm}$ long. Anthers 3. Stigmas 2. Ovary glabrous. Caryopsis with adherent pericarp, fusiform, 4 mm long. Hilum linear.

Distribution (TDWG). Continent. South America.
Country /Province/State. Western South America, Southern South America. Bolivia. Argentina Northwest, Chile North, Chile Central.

Catamarca, Jujuy, La Rioja, Mendoza, Salta, San Juan. Tarapaca, Antofagasta, Atacama. Coquimbo, Santiago, Maule.

Pappostipa hieronymusii (Pilg.) Romaschenko. J. Bot. Res. Inst. Texas 2: 183 (2008).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online (as Stipa), U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Argentina. Basionym or Replaced Name: Stipa hieronymusii Pilger, Engl. Jahrb. lvi. Beibl. 123, 24 (1920). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Argentina, Laguna Brava: Hieronymus \& Niederlein 314 (B holo, CORD).

Recent Synonyms: Jarava hieronymusii (Pilg.) Penail., Gayana, Bot. 59(1): 31 (2002).
Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 2 Pooideae (2012) (465).

Derivation (Clifford \& Bostock 2007): in honor of George Hans Emmo Wolfgang Hieronymus (18461921) German botanist, sometime resident of Argentina.

Classification. Subfamily Pooideae. Tribe: Stipeae.
Habit, Vegetative Morphology. Perennial, caespitose, clumped densely. Basal innovations intravaginal. Culms $15-25 \mathrm{~cm}$ long, 1 -noded. Leaf-sheaths $4-8 \mathrm{~cm}$ long, pubescent. Leaf-sheath oral hairs ciliate. Ligule a ciliolate membrane. Leaf-blades convolute, $7-25 \mathrm{~cm}$ long, 0.8 mm wide, stiff. Leaf-blade surface pubescent, hairy adaxially. Leaf-blade apex acute, pungent.

Inflorescence. Inflorescence a panicle, terminal or terminal and axillary, subtended by an inflated leafsheath, embraced at base by subtending leaf. Panicle contracted, linear, $4-15 \mathrm{~cm}$ long. Panicle axis puberulous. Panicle branches puberulous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets lanceolate, subterete, $17-22 \mathrm{~mm}$ long, breaking up at maturity, disarticulating below each fertile floret. Floret callus elongated, $1.5-2 \mathrm{~mm}$ long, pubescent, pungent.

Glumes. Glumes persistent, similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate, $17-22 \mathrm{~mm}$ long, 1 length of upper glume, membranous, much thinner on margins, purple, without keels. Lower glume apex attenuate. Upper glume lanceolate, $17-22 \mathrm{~mm}$ long, membranous, with hyaline margins, purple, without keels. Upper glume apex attenuate.

Florets. Fertile lemma lanceolate, subterete, $8-9 \mathrm{~mm}$ long, coriaceous, yellow, without keel, 5 -veined, more than 3-veined. Lemma surface pubescent, hairy below. Lemma margins convolute, covering most of palea. Lemma apex dentate, 2 -fid, with lobes 1.5 mm long, awned, 1 -awned. Principal lemma awn from a
sinus, geniculate, $18-25 \mathrm{~mm}$ long overall, with $10-15 \mathrm{~mm}$ long limb, with twisted column. Column of lemma awn 10 mm long, plumose, with $5-6 \mathrm{~mm}$ long hairs. Palea 5 mm long.

Flower and Fruit. Anthers $3,4.5 \mathrm{~mm}$ long. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Southern South America. Argentina Northwest.
Catamarca, La Rioja, Salta.

## Pappostipa humilis (Cav.) Romaschenko. J. Bot. Res. Inst. Texas 2: 185 (2008).

Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online (as Stipa), U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Chile. Basionym or Replaced Name: Stipa humilis Cav., Ic. v. 41. t. 466. f. 1 (1799). $\mathrm{T}:<$ Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Chile, Puerto Deseado: Nee (MA holo).

Recent Synonyms: Jarava humilis (Cav.) Penail., Gayana, Bot. 59(1): 31 (2002).
Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 2 Pooideae (2012) (466 \& 467), M.N.Correa, Flora Patagonica Parte III, Gramineae (1978) (314, Fig 205 as Stipa).

Derivation (Clifford \& Bostock 2007): L. low growing. Short-statured in comparison with related species often prostrate.

Classification. Subfamily Pooideae. Tribe: Stipeae.
Habit, Vegetative Morphology. Perennial, caespitose. Stolons present. Butt sheaths yellow. Culms $20-40 \mathrm{~cm}$ long, 1 mm diam., 2-3 -noded. Culm-internodes smooth, distally glabrous or pubescent. Culmnodes brown, glabrous. Leaf-sheaths smooth, glabrous on surface, outer margin hairy. Ligule an eciliate membrane or a ciliolate membrane, $3-4 \mathrm{~mm}$ long, $0.2-0.3 \mathrm{~mm}$ long on basal shoots, acute. Leaf-blades filiform, conduplicate, $10-30 \mathrm{~cm}$ long, 0.5 mm wide. Leaf-blade surface ribbed, scaberulous, glabrous.

Inflorescence. Inflorescence a panicle, embraced at base by subtending leaf. Panicle contracted, 5-9 cm long, $0.5-1 \mathrm{~cm}$ wide, bearing few spikelets. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $2-7 \mathrm{~mm}$ long, scabrous, tip widened.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets lanceolate, subterete, $18-22 \mathrm{~mm}$ long, breaking up at maturity, disarticulating below each fertile floret. Floret callus elongated, $1.5-2 \mathrm{~mm}$ long, pilose, pungent.

Glumes. Glumes persistent, similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate, 18-22 mm long, 1.05 length of upper glume, membranous, 1 -keeled, 3 -veined. Lower glume primary vein ciliate. Lower glume apex attenuate. Upper glume lanceolate, $16-20 \mathrm{~mm}$ long, membranous, without keels, 3 -veined. Upper glume apex attenuate.

Florets. Fertile lemma lanceolate, subterete, $7-11 \mathrm{~mm}$ long, coriaceous, without keel, 5 -veined, more than 3 -veined. Lemma surface pubescent, hairy below. Lemma margins convolute, covering most of palea. Lemma apex awned, 1 -awned. Principal lemma awn geniculate, $35-75 \mathrm{~mm}$ long overall, with twisted column. Column of lemma awn 12-25 mm long, plumose, hairy on upper part, with $8-10 \mathrm{~mm}$ long hairs. Palea 4-5 mm long, 2 -veined, without keels.

Flower and Fruit. Lodicules 3. Anthers 3, anther tip smooth. Stigmas 2. Ovary glabrous. Caryopsis with adherent pericarp, fusiform, 6-7 mm long, dark brown. Hilum linear.

Distribution (TDWG). Continent. South America.
Country /Province /State. Southern South America. Argentina South, Chile South.
Mendoza. La Pampa. Chubut, Neuquén, Río Negro, Santa Cruz, Tierra del Fuego. Tarapaca, Antofagasta, Atacama, Coquimbo, Rest of Chile- Biobio, La Auracania, Maule, O'Higgins, Santado, Valpariso, Chiloe, Aisen, Magellanes. Aisen, Magellanes.

TYPE from Chile. Basionym or Replaced Name: Stipa ibarii R. Phil., Anal. Univ. Chil. 93: 716 (1896). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Chile, Lake Pinto: Ibar (SGO holo, , B).

Recent Synonyms: Jarava ibarii (Phil.) Penail., Gayana, Bot. 59(1): 31 (2002).
Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 2 Pooideae (2012) (467), M.N.Correa, Flora Patagonica Parte III, Gramineae (1978) (302, Fig 196 as Stipa ibari).

Derivation (Clifford \& Bostock 2007): in honor of Enrique Ibar (fl. 1877-78) who collected in Patagonia.

Classification. Subfamily Pooideae. Tribe: Stipeae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths yellow. Culms erect or geniculately ascending, $7-20 \mathrm{~cm}$ long, 0.5 mm diam., $1-2$-noded. Culm-internodes distally pubescent. Culm-nodes swollen, pubescent. Leaf-sheaths mostly shorter than adjacent culm internode, pubescent. Leaf-sheath oral hairs ciliate. Ligule a ciliolate membrane, 0.5 mm long. Leaf-blades straight or curved, conduplicate, $3-10 \mathrm{~cm}$ long, 0.5 mm wide. Leaf-blade surface pubescent.

Inflorescence. Inflorescence a panicle, comprising 4-15 fertile spikelets, embraced at base by subtending leaf. Panicle open, oblong, 4-9 cm long, bearing few spikelets. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, 2-7 mm long, ciliate.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets lanceolate, subterete, $17-23 \mathrm{~mm}$ long, breaking up at maturity, disarticulating below each fertile floret. Floret callus evident, pubescent, pungent.

Glumes. Glumes persistent, similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate, $17-23 \mathrm{~mm}$ long, 1 length of upper glume, membranous, 1-keeled, 3 -veined. Lower glume primary vein eciliate or ciliolate. Lower glume apex acuminate. Upper glume lanceolate, 17-23 mm long, membranous, 1 -keeled, 3 -veined. Upper glume primary vein eciliate or ciliolate. Upper glume apex acuminate.

Florets. Fertile lemma lanceolate, subterete, 7-9 mm long, coriaceous, without keel, 5 -veined, more than 3 -veined. Lemma surface pilose. Lemma margins convolute, covering most of palea. Lemma hairs 1 mm long. Lemma apex dentate, 2 -fid, with lobes 1 mm long, awned, 1 -awned. Principal lemma awn from a sinus, geniculate, $21-44 \mathrm{~mm}$ long overall, with twisted column. Column of lemma awn $7-14 \mathrm{~mm}$ long, plumose. Palea 1 length of lemma, 2 -veined, without keels.

Flower and Fruit. Lodicules 3. Anthers 3. Stigmas 2. Ovary glabrous. Caryopsis with adherent pericarp, fusiform, 6-7 mm long. Hilum linear.

Distribution (TDWG). Continent. South America.
Country /Province /State. Southern South America. Argentina South, Chile South.
Mendoza. Chubut, Neuquén, Santa Cruz. Magellanes.

Recent Synonyms: Jarava maeviae (F.A.Roig) Penail., Gayana, Bot. 59(1): 31 (2002).
Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 2 Pooideae (2012) (469), M.N.Correa, Flora Patagonica Parte III, Gramineae (1978) (297, Fig 192 as Stipa).

Derivation (Clifford \& Bostock 2007): in honor of Maevia Noimi Correa, Argentine botanist.
Classification. Subfamily Pooideae. Tribe: Stipeae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths red, pilose. Culms 5-7 cm long, 2 -noded. Culm-internodes distally hirsute. Culm-nodes constricted. Leaf-sheaths longer than adjacent culm internode, pubescent. Ligule a ciliolate membrane, 2 mm long, $0.25-0.5 \mathrm{~mm}$ long on basal shoots, pubescent on abaxial surface, acute. Leaf-blades curved or flexuous, conduplicate, $10-20 \mathrm{~cm}$ long, 1 mm wide, stiff. Leaf-blade surface glabrous, hairless except near base. Leaf-blade apex pungent.

Inflorescence. Inflorescence a panicle, comprising 6-7 fertile spikelets, shorter than basal leaves, embraced at base by subtending leaf. Panicle open, oblong, 3 cm long, $1-1.5 \mathrm{~cm}$ wide, bearing few spikelets. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $3-7 \mathrm{~mm}$ long, villous.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets lanceolate, subterete, $18-22 \mathrm{~mm}$ long, breaking up at maturity, disarticulating below each fertile floret. Floret callus elongated, curved, $1.5-2 \mathrm{~mm}$ long, pubescent, acute.

Glumes. Glumes persistent, similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate, $18-22 \mathrm{~mm}$ long, 1.05 length of upper glume, membranous, without keels, 1 -veined. Lower glume primary vein ciliate. Lower glume lateral veins absent. Lower glume surface puberulous. Lower glume apex acuminate. Upper glume lanceolate, 17-20 mm long, membranous, without keels, 3 veined. Upper glume primary vein ciliate. Upper glume surface puberulous. Upper glume apex acuminate.

Florets. Fertile lemma lanceolate, subterete, $7-8 \mathrm{~mm}$ long, coriaceous, without keel, 5 -veined, more than 3 -veined. Lemma surface villous. Lemma margins convolute, covering most of palea. Lemma hairs 34 mm long. Lemma apex dentate, 2 -fid, with lobes 2 mm long, awned, 1 -awned. Principal lemma awn from a sinus, geniculate, $16-20 \mathrm{~mm}$ long overall, with twisted column, limb glabrous. Column of lemma awn 7-9 mm long, plumose. Palea 2.6-3 mm long, 0 -veined, without keels.

Flower and Fruit. Lodicules 3. Anthers 3. Stigmas 2. Ovary glabrous. Caryopsis with adherent pericarp, fusiform. Hilum linear.

Distribution (TDWG). Continent. South America.
Country /Province /State. Southern South America. Argentina South.
Neuquén.

Pappostipa major (Speg.) Romaschenko. J. Bot. Res. Inst. Texas 2: 184 (2008).
TYPE from Argentina. Basionym or Replaced Name: Stipa speciosa fo. major Speg., Anales Mus. Nac. Montevideo 4(2): 58, f. 10a-b (1901). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Argentina: vulgata prope Lago Nahuel-huapi, Jan 1900 (Fernández) \& in Valle Trolope, Neuquen, Feb 1900 (Asp), E. Fernández s.n. \& Otto Asp.

Recent Synonyms: Jarava speciosa var. major (Speg.) Parodi, Contr. U.S. Natl. Herb. 48:407 (2003). Illustrations: None found.
Classification. Subfamily Pooideae. Tribe: Stipeae.

## Pappostipa malalhuensis (F.A.Roig) Romaschenko. J. Bot. Res. Inst. Texas 2: 184 (2008).

Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online (as Stipa), U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Argentina. Basionym or Replaced Name: Stipa malalhuensis F.A.Roig, Rev. Fac. Cicnc. Agrar. Univ. Nac. Cuyo, 1160 (1966). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Argentina, Poti Malal: Ruiz Leal 20938 (MERL holo).

Recent Synonyms: Jarava malalhuensis (F.A.Roig) Penail., Gayana, Bot. 59(1): 31 (2002).
Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 2 Pooideae (2012) (470), M.N.Correa, Flora Patagonica Parte III, Gramineae (1978) (304, Fig 200 as Stipa).

Derivation (Clifford \& Bostock 2007): L. -ensis, denoting origin. From Malalhue, Argentina.
Classification. Subfamily Pooideae. Tribe: Stipeae.
Habit, Vegetative Morphology. Perennial. Butt sheaths yellow, glabrous. Culms $30-40 \mathrm{~cm}$ long, 1 mm diam., 2-3 -noded. Culm-internodes distally glabrous or pubescent. Culm-nodes flush with internodes, brown, glabrous. Leaf-sheath oral hairs lacking or pubescent. Ligule an eciliate membrane, 3 mm long, 1 mm long on basal shoots. Leaf-blades conduplicate, $15-25 \mathrm{~cm}$ long, 1 mm wide. Leaf-blade surface glabrous. Leaf-blade apex attenuate.

Inflorescence. Inflorescence a panicle, comprising 15-25 fertile spikelets. Panicle open, oblong, 8-15 cm long, $0.5-1 \mathrm{~cm}$ wide. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $8-14 \mathrm{~mm}$ long, ciliate, hairy above.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets lanceolate, subterete, $29-32 \mathrm{~mm}$ long, breaking up at maturity, disarticulating below each fertile floret. Floret callus elongated, curved, 3 mm long, pubescent, pungent.

Glumes. Glumes persistent, similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate, 29-32 mm long, 1.05 length of upper glume, membranous, without keels. Lower glume apex attenuate. Upper glume lanceolate, $27-31 \mathrm{~mm}$ long, membranous, without keels. Upper glume apex attenuate.

Florets. Fertile lemma lanceolate, subterete, 10-12 mm long, coriaceous, without keel, 5 -veined, more than 3 -veined. Lemma surface pubescent. Lemma margins convolute, covering most of palea. Lemma apex awned, 1 -awned. Principal lemma awn geniculate, $90-110 \mathrm{~mm}$ long overall, with twisted column. Column of lemma awn 17-18 mm long, plumose, with $4-5 \mathrm{~mm}$ long hairs. Palea $6-8 \mathrm{~mm}$ long, $0-1$-veined, without keels. Palea surface pubescent.

Flower and Fruit. Lodicules 3. Anthers 3, yellow, anther tip smooth. Stigmas 2. Ovary glabrous. Caryopsis with adherent pericarp, fusiform. Hilum linear.

Distribution (TDWG). Continent. South America.
Country /Province /State. Southern South America. Argentina South.
Mendoza. Chubut.

Derivation (Clifford \& Bostock 2007): L. dwarf. Smaller than related species.
Classification. Subfamily Pooideae. Tribe: Stipeae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect or geniculately ascending, 7-13 cm long, 2-3 -noded. Culm-internodes smooth. Culm-nodes glabrous. Ligule an eciliate membrane, 1 mm long, 0.5 mm long on basal shoots, acute. Leaf-blades curved, conduplicate, $3-4 \mathrm{~cm}$ long, $0.5-1 \mathrm{~mm}$ wide. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, linear, $3-5 \mathrm{~cm}$ long, bearing few spikelets. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, 2-7 mm long, ciliate.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets lanceolate, subterete, $15-18 \mathrm{~mm}$ long, breaking up at maturity, disarticulating below each fertile floret. Floret callus evident, $1.8-2 \mathrm{~mm}$ long, acute.

Glumes. Glumes persistent, similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate, $15-18 \mathrm{~mm}$ long, 1 length of upper glume, membranous, without keels. Lower glume apex acuminate. Upper glume lanceolate, $15-18 \mathrm{~mm}$ long, membranous, without keels. Upper glume apex acuminate.

Florets. Fertile lemma lanceolate, subterete, $6.5-7.5 \mathrm{~mm}$ long, coriaceous, without keel, 5 -veined, more than 3 -veined. Lemma surface pubescent. Lemma margins convolute, covering most of palea. Lemma apex awned, 1 -awned. Principal lemma awn geniculate, $23-28 \mathrm{~mm}$ long overall, with twisted column. Column of lemma awn $9-10 \mathrm{~mm}$ long, plumose. Palea 5 mm long, 0 -veined, without keels. Palea surface pubescent.

Flower and Fruit. Lodicules 3. Anthers 3, yellow, anther tip smooth. Stigmas 2. Ovary glabrous. Caryopsis with adherent pericarp, fusiform. Hilum linear.

Distribution (TDWG). Continent. South America.
Country/Province/State. Southern South America. Argentina South.
Chubut, Santa Cruz.

Pappostipa nicorae (F.A.Roig) Romaschenko. J. Bot. Res. Inst. Texas 2: 183 (2008).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online (as Stipa), U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Argentina. Basionym or Replaced Name: Stipa nicorae F.A. Roig, Giorn. Bot. Ital., 121: 41 (1987). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Argentina, Reserva de San Guillermo: Nicora, Guaglianone \& Ragonese 9201 (SI holo, LP).

Recent Synonyms: Jarava nicorae (F.A.Roig) Penail. Gayana, Bot. 59(1): 32 (2002).
Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 2 Pooideae (2012) (472).

Derivation (Clifford \& Bostock 2007): in honor of Elisa Gernaela Nicora de Panza (1912-) Argentinian botanist.

Classification. Subfamily Pooideae. Tribe: Stipeae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms 10-19 cm long, 2 -noded. Culm-nodes swollen, glabrous. Leaf-sheaths longer than adjacent culm internode, smooth, glabrous on surface. Leafsheath oral hairs pubescent. Ligule an eciliate membrane. Leaf-blades convolute, $0.4-0.5 \mathrm{~mm}$ wide. Leafblade surface glabrous. Leaf-blade apex acuminate, pungent.

Inflorescence. Inflorescence a panicle, comprising 9-12 fertile spikelets, subtended by an inflated leafsheath, embraced at base by subtending leaf. Panicle open, linear, $3-7 \mathrm{~cm}$ long, bearing few spikelets. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $2-8 \mathrm{~mm}$ long, pubescent.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets lanceolate, subterete, $19-26 \mathrm{~mm}$ long, breaking up at maturity, disarticulating below each fertile floret. Floret callus elongated, $1.2-1.8 \mathrm{~mm}$ long, glabrous, acute.

Glumes. Glumes persistent, similar, exceeding apex of florets, thinner than fertile lemma. Lower glume linear, 19-26 mm long, 1 length of upper glume, membranous, much thinner on margins, yellow, 1keeled, 3 -veined. Lower glume primary vein ciliolate. Lower glume surface pubescent. Lower glume apex acuminate. Upper glume linear, 19-26 mm long, membranous, with hyaline margins, yellow, 1-keeled, 3 veined. Upper glume primary vein ciliolate. Upper glume surface pubescent. Upper glume apex acuminate.

Florets. Fertile lemma lanceolate, subterete, $7-8 \mathrm{~mm}$ long, coriaceous, without keel, 5 -veined, more than 3-veined. Lemma surface pubescent, hairy below, with conspicuous apical hairs. Lemma margins convolute, covering most of palea. Lemma hairs 3 mm long. Lemma apex awned, 1 -awned. Principal lemma awn geniculate, $20-50 \mathrm{~mm}$ long overall, with $19-20 \mathrm{~mm}$ long limb, with twisted column. Column of lemma awn 10-13 mm long, plumose. Palea 6-7 mm long, 0 -veined. Palea surface hirsute.

Flower and Fruit. Caryopsis with adherent pericarp, 4-4.5 mm long.
Distribution (TDWG). Continent. South America.
Country /Province /State. Southern South America. Argentina Northwest.
Catamarca, Mendoza, San Juan.

Pappostipa parodiana (F.A.Roig) Romaschenko. J. Bot. Res. Inst. Texas 2: 183 (2008).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online (as Stipa), U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Argentina. Basionym or Replaced Name: Stipa parodiana F.A.Roig, Rev. Fac. Cienc. Agrar. Univ. Nac. Cuyo, 11: 44 (1966). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Argentina, Malalhue: Ruiz Leal 21453 (MERL holo).

Recent Synonyms: Jarava parodiana (F.A.Roig) Penail., Gayana, Bot. 59(1): 32 (2002).
Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 2 Pooideae (2012) (473), M.N.Correa, Flora Patagonica Parte III, Gramineae (1978) (304, Fig 199 as Stipa).

Derivation (Clifford \& Bostock 2007): L. -ana, indicating connection. In honor of Lorenzo Raimondo Parodi (1895-1966) Argentinian agrostologist.

Classification. Subfamily Pooideae. Tribe: Stipeae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths red, pilose. Culms 30-40 cm long, 1 mm diam., 2-3 -noded. Culm-internodes distally pilose, with reflexed hairs. Culm-nodes swollen, purple, glabrous. Leaf-sheaths mostly shorter than adjacent culm internode. Leaf-sheath oral hairs ciliate. Ligule a ciliolate membrane, 3 mm long, 0.5 mm long on basal shoots, acute. Leaf-blades 1 mm wide.

Inflorescence. Inflorescence a panicle, comprising 14-18 fertile spikelets. Panicle open, linear, 10-15 cm long, $1.5-2 \mathrm{~cm}$ wide. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $4-10 \mathrm{~mm}$ long, ciliate, hairy above.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets lanceolate, subterete, $34-48 \mathrm{~mm}$ long, breaking up at maturity, disarticulating below each fertile floret. Floret callus elongated, curved, $2-3 \mathrm{~mm}$ long, pubescent, pungent.

Glumes. Glumes persistent, similar, exceeding apex of florets, thinner than fertile lemma. Lower glume linear, 34-48 mm long, 1.05 length of upper glume, membranous, without keels, 3 -veined. Lower glume apex attenuate. Upper glume linear, 32-38 mm long, membranous, without keels, 3 -veined. Upper glume apex attenuate.

Florets. Fertile lemma lanceolate, subterete, 11-13 mm long, coriaceous, without keel, 5 -veined, more than 3 -veined. Lemma surface pubescent, hairy below. Lemma margins convolute, covering most of palea. Lemma apex dentate, 2 -fid, with lobes 1 mm long, awned, 1 -awned. Principal lemma awn from a sinus, geniculate, $50-70 \mathrm{~mm}$ long overall, with twisted column. Column of lemma awn $18-25 \mathrm{~mm}$ long. Palea 2.3-5 mm long, without keels.

Flower and Fruit. Lodicules 3. Anthers 3, anther tip smooth. Stigmas 2. Ovary glabrous. Caryopsis with adherent pericarp, fusiform. Hilum linear.

Distribution (TDWG). Continent. South America.
Country /Province /State. Southern South America. Argentina South.
Mendoza. La Pampa. Neuquén, Río Negro.

Pappostipa patagonica (Speg.) Romaschenko. J. Bot. Res. Inst. Texas 2: 183 (2008).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online (as Stipa), U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Argentina. Basionym or Replaced Name: Stipa patagonica Speg., Agron. La Plata, 1897, 581 (1897). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Argentina, Rio Santa Cruz: Spegazzini (LPS syn).

Recent Synonyms: Jarava patagonica (Speg.) Penail. Gayana, Bot. 59(1): 32 (2002).
Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. -ica, belonging to. From Patagonia.
Classification. Subfamily Pooideae. Tribe: Stipeae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths red or purple. Basal innovations intravaginal. Culms geniculately ascending, 22-40 cm long, $0.6-1.4 \mathrm{~mm}$ diam., 2 -noded. Culm-internodes distally glabrous or pubescent. Culm-nodes constricted, glabrous. Leaf-sheaths glabrous on surface or pilose, outer margin hairy. Leaf-sheath oral hairs ciliate. Ligule a ciliolate membrane, $0.5-2 \mathrm{~mm}$ long, $0.2-$ 0.3 mm long on basal shoots, pubescent on abaxial surface, truncate. Collar pubescent. Leaf-blades erect, straight or curved, deciduous at the ligule, filiform, conduplicate, $5-20 \mathrm{~cm}$ long, $0.8-1 \mathrm{~mm}$ wide, stiff. Leaf-blade surface pubescent, hairy adaxially or on both sides. Leaf-blade margins ciliate. Leaf-blade apex attenuate, pungent.

Inflorescence. Inflorescence a panicle, subtended by an inflated leaf-sheath, embraced at base by subtending leaf. Panicle contracted, oblong, $5-10 \mathrm{~cm}$ long, bearing few spikelets. Primary panicle branches appressed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, pubescent.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets lanceolate, subterete, $20-33 \mathrm{~mm}$ long, breaking up at maturity, disarticulating below each fertile floret. Floret callus elongated, $2.5-3 \mathrm{~mm}$ long, pubescent, pungent.

Glumes. Glumes persistent, similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate, 20-33 mm long, 1 length of upper glume, membranous, without keels, 3-5 -veined. Lower glume apex attenuate. Upper glume lanceolate, 20-33 mm long, membranous, without keels, 3-5 veined. Upper glume apex attenuate.

Florets. Fertile lemma linear, subterete, $10-13.5 \mathrm{~mm}$ long, coriaceous, without keel, 5 -veined, more than 3-veined. Lemma surface pubescent. Lemma margins convolute, covering most of palea. Lemma apex awned, 1 -awned. Principal lemma awn geniculate, $35-55 \mathrm{~mm}$ long overall, with $25-45 \mathrm{~mm}$ long limb, with twisted column. Column of lemma awn $8-10 \mathrm{~mm}$ long, plumose, with $7-10 \mathrm{~mm}$ long hairs. Palea linear, 1 length of lemma, 2 -veined. Palea surface pubescent, hairy on back, hairy in the middle.

Flower and Fruit. Lodicules 3, $1.5-3 \mathrm{~mm}$ long. Anthers 3, 5-5.5 mm long. Caryopsis with adherent pericarp, fusiform, $8-8.5 \mathrm{~mm}$ long, dark brown. Embryo 0.33 length of caryopsis. Hilum linear, 1 length of caryopsis.

Distribution (TDWG). Continent. South America.
Country /Province /State. Southern South America. Argentina Northeast, Argentina South, Argentina Northwest.

Mendoza. La Pampa. Chubut, Neuquén, Río Negro, Santa Cruz.

Pappostipa ruizlealii (F.A.Roig) Romaschenko. J. Bot. Res. Inst. Texas 2: 183 (2008).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online (as Stipa), U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Argentina. Basionym or Replaced Name: Stipa ruizlealii F.A.Roig, Rev. Fac. Cienc. Agrar. Univ. Nac. Cuyo, 11: 42 (1966). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Argentina, Paramillo to Uspallata: Ruiz-Leal 20774.

Recent Synonyms: Jarava ruizlealii (F.A.Roig) Penail., Gayana, Bot. 59(1): 32 (2002).
Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 2 Pooideae (2012) (473).

Derivation (Clifford \& Bostock 2007): In honor of Adrian Ruiz Leal (fl. 1933-1942) who collected in Argentina.

Classification. Subfamily Pooideae. Tribe: Stipeae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms 25-30 cm long. Culm-internodes distally pubescent. Culm-nodes constricted, brown, glabrous. Leaf-sheaths longer than adjacent culm internode, glabrous on surface, outer margin hairy. Ligule an eciliate membrane, $0.5-1 \mathrm{~mm}$ long, hyaline. Leaf-blades filiform, convolute, 1 mm wide, stiff. Leaf-blade surface puberulous, hairy adaxially. Leafblade apex pungent.

Inflorescence. Inflorescence a panicle, comprising 8-15 fertile spikelets. Panicle open, oblong, 6-9 cm long, bearing few spikelets. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets linear, subterete, $15-20 \mathrm{~mm}$ long, breaking up at maturity, disarticulating below each fertile floret. Floret callus elongated, curved, $2-3 \mathrm{~mm}$ long, bearded, acute.

Glumes. Glumes similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate, $15-20 \mathrm{~mm}$ long, 1 length of upper glume, hyaline, much thinner above, much thinner on margins, purple, without keels. Lower glume apex acuminate. Upper glume lanceolate, $15-20 \mathrm{~mm}$ long, 1.5-2 length of adjacent fertile lemma, hyaline, much thinner above, with hyaline margins, purple, without keels. Upper glume apex acuminate.

Florets. Fertile lemma linear to lanceolate, subterete, $10-11 \mathrm{~mm}$ long, coriaceous, light brown, without keel, 5 -veined, more than 3-veined. Lemma surface pubescent, hairy below. Lemma margins convolute, covering most of palea. Lemma apex dentate, 2 -fid, surmounted by a ring of hairs, with this appendage 34 mm long, awned, 1 -awned. Principal lemma awn from a sinus, geniculate, $22-33 \mathrm{~mm}$ long overall, with $11-19 \mathrm{~mm}$ long limb, with twisted column. Column of lemma awn 11-14 mm long, plumose, with 5-6 mm long hairs. Palea $9-10 \mathrm{~mm}$ long, 0.9 length of lemma, 2 -veined, 1 -keeled.

Flower and Fruit. Anthers 3, purple. Stigmas 2. Caryopsis with adherent pericarp, fusiform, 9 mm long. Hilum linear.

Distribution (TDWG). Continent. South America.
Country /Province/State. Southern South America. Argentina Northwest.
Mendoza.

## Pappostipa semperiana (F.A.Roig) Romaschenko. J. Bot. Res. Inst. Texas 2: 183 (2008).

Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online (as Stipa), U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Argentina. Basionym or Replaced Name: Stipa semperiana F.A.Roig, Rev. Fac. Cienc. Agrar. Univ. Nac. Cuyo, 11: 37 (1966). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Argentina, Uspallata to Puesto San Alberto: Ruiz-Leal 11138.

Recent Synonyms: Jarava semperiana (F.A.Roig) Penail., Gayana, Bot. 59(1): 32 (2002).
Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 2 Pooideae (2012) (474).

Derivation (Clifford \& Bostock 2007): In honor of Juan Semper (fl. 1944-1945) who collected in Argentina.

Classification. Subfamily Pooideae. Tribe: Stipeae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms $20-50 \mathrm{~cm}$ long, $1.5-2 \mathrm{~mm}$ diam. Culminternodes distally pubescent. Culm-nodes black, glabrous. Leaf-sheaths outer margin hairy. Leaf-sheath oral hairs ciliate. Ligule an eciliate membrane, $2-4 \mathrm{~mm}$ long, hyaline. Leaf-blades filiform, convolute, 1 mm wide. Leaf-blade surface pubescent, densely hairy, hairy adaxially. Leaf-blade margins ciliate.

Inflorescence. Inflorescence a panicle, comprising 20-25 fertile spikelets. Panicle open, oblong, 8-10 cm long, $3-5 \mathrm{~cm}$ wide, bearing few spikelets. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets linear, subterete, $29-32 \mathrm{~mm}$ long, breaking up at maturity, disarticulating below each fertile floret. Floret callus elongated, 2 mm long, pubescent, pungent.

Glumes. Glumes similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate, $29-32 \mathrm{~mm}$ long, 1.1 length of upper glume, hyaline, without keels. Lower glume apex attenuate. Upper glume lanceolate, $27-28 \mathrm{~mm}$ long, 2.5 length of adjacent fertile lemma, hyaline, without keels. Upper glume apex attenuate.

Florets. Fertile lemma linear to lanceolate, subterete, $10-13 \mathrm{~mm}$ long, coriaceous, without keel, 5 veined, more than 3 -veined. Lemma surface pubescent. Lemma margins convolute, covering most of palea. Lemma apex dentate, 2 -fid, surmounted by a ring of hairs, with this appendage $3-4 \mathrm{~mm}$ long, awned, 1 awned. Principal lemma awn from a sinus, geniculate, $5-75 \mathrm{~mm}$ long overall, with $40-55 \mathrm{~mm}$ long limb, with twisted column. Column of lemma awn 16-20 mm long, plumose, with 5-6 mm long hairs. Palea 5-6 mm long, 0.5 length of lemma, 2 -veined, without keels.

Flower and Fruit. Anthers 3, yellow. Stigmas 2. Caryopsis with adherent pericarp, fusiform. Hilum linear.

Distribution (TDWG). Continent. South America.
Country /Province/State. Southern South America. Argentina Northeast, Argentina Northwest. Mendoza. La Pampa.

Pappostipa sorianoi (Parodi) Romaschenko. J. Bot. Res. Inst. Texas 2: 184 (2008).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online (as Stipa), U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Argentina. Basionym or Replaced Name: Stipa sorianoi L. Parodi, Rev. Argent. Agron. 27: 94 (1960). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Argentina, Santa Cruz: Soriano 4775 (BAA holo).

Recent Synonyms: Jarava sorianoi (Parodi) Penail., Gayana, Bot. 59(1): 33 (2002).
Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 2 Pooideae (2012) (475), M.N.Correa, Flora Patagonica Parte III, Gramineae (1978) (308, Fig 202 as Stipa).

Derivation (Clifford \& Bostock 2007): in honor of Alberto Soriano (fl. 1960) Argentinian agriculturalist.

Classification. Subfamily Pooideae. Tribe: Stipeae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths yellow, pubescent. Culms 15-20 cm long, $0.3-0.5 \mathrm{~mm}$ diam., 2-3 -noded. Culm-internodes antrorsely scabrous. Culm-nodes glabrous. Leafsheaths $5-7 \mathrm{~cm}$ long. Ligule an eciliate membrane, acute. Leaf-blades filiform, conduplicate, 8-10 cm long, $0.3-0.4 \mathrm{~mm}$ wide. Leaf-blade surface glabrous. Leaf-blade apex acute.

Inflorescence. Inflorescence a panicle, comprising 10 fertile spikelets, exserted or embraced at base by subtending leaf. Panicle open, lanceolate, $3-7 \mathrm{~cm}$ long, bearing few spikelets. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $2-7 \mathrm{~mm}$ long, scabrous, ciliate, hairy above.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets lanceolate, subterete, 19-26 mm long, breaking up at maturity, disarticulating below each fertile floret. Floret callus evident, 2 mm long, pubescent, pungent.

Glumes. Glumes persistent, similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate, 19-26 mm long, 1 length of upper glume, membranous, 1-keeled, 1 -veined. Lower glume lateral veins absent. Lower glume apex attenuate. Upper glume lanceolate, 19-26 mm long, membranous, without keels, 3 -veined. Upper glume apex attenuate.

Florets. Fertile lemma lanceolate, subterete, $8-9 \mathrm{~mm}$ long, coriaceous, without keel, 5 -veined, more than 3-veined. Lemma surface pubescent, hairy below. Lemma margins convolute, covering most of palea. Lemma apex dentate, 2 -fid, with lobes 2 mm long, awned, 1 -awned. Principal lemma awn from a sinus,
geniculate, $30-40 \mathrm{~mm}$ long overall, with twisted column. Column of lemma awn 11-14 mm long, plumose, with 5-6 mm long hairs. Palea 5-6 mm long, 2 -veined, without keels. Palea surface pubescent.

Flower and Fruit. Lodicules 3. Anthers 3, yellow or purple, anther tip smooth. Stigmas 2. Ovary glabrous. Caryopsis with adherent pericarp, fusiform. Hilum linear.

Distribution (TDWG). Continent. South America.
Country /Province/State. Southern South America. Argentina South. Chubut, Santa Cruz.

Images: R.Darke, Ornamental Grasses (2004); (as Achnatherum), R.Darke, The Encylopaedia of Grasses for Liveable Landscapes (2007); (as Achnatherum).

Derivation (Clifford \& Bostock 2007): L. species, beauty; -osa, abundance. Showy in some respect, in particular the inflorescence.

Classification. Subfamily Pooideae. Tribe: Stipeae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths dark brown, pubescent. Culms erect, $25-90 \mathrm{~cm}$ long. Culm-nodes brown. Leaf-sheaths longer than adjacent culm internode. Leaf-sheath oral hairs lacking to pubescent. Ligule an eciliate membrane. Collar glabrous. Leaf-blades filiform, conduplicate, $5-42 \mathrm{~cm}$ long, $0.7-0.8 \mathrm{~mm}$ wide. Leaf-blade apex pungent.

Inflorescence. Inflorescence a panicle. Panicle open, nodding, 7-14 cm long. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, ciliate, hairy all along but hairs longer above.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets lanceolate, subterete, $25-40 \mathrm{~mm}$ long, breaking up at maturity, disarticulating below each fertile floret. Floret callus elongated, curved, $3-3.5 \mathrm{~mm}$ long, pubescent, pungent.

Glumes. Glumes persistent, similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate, 1 length of upper glume, hyaline, without keels, 3-5 -veined. Lower glume surface asperulous. Lower glume apex acuminate. Upper glume lanceolate, 25-40 mm long, 2-2.5 length of adjacent fertile lemma, hyaline, without keels, 3-5 -veined. Upper glume surface asperulous. Upper glume apex acuminate.

Florets. Fertile lemma lanceolate, subterete, 11-14 mm long, coriaceous, without keel, 5 -veined, more than 3 -veined. Lemma surface pubescent, hairy all along. Lemma margins convolute, covering most of palea. Lemma apex dentate, 2 -fid, with lobes $1-1.5 \mathrm{~mm}$ long, pubescent, surmounted by a ring of hairs, with this appendage $0.5-1 \mathrm{~mm}$ long, awned, 1 -awned. Principal lemma awn from a sinus, geniculate, 4085 mm long overall, with $20-70 \mathrm{~mm}$ long limb, with twisted column, deciduous, limb glabrous. Column of lemma awn 10-25 mm long, plumose, with $5-10 \mathrm{~mm}$ long hairs. Palea $4.5-5 \mathrm{~mm}$ long, $0.33-0.5$ length of lemma, 2 -veined, without keels.

Flower and Fruit. Lodicules 3. Anthers 3, $4.5-5 \mathrm{~mm}$ long, anther tip smooth. Stigmas 2. Ovary glabrous. Caryopsis with adherent pericarp, fusiform, $8-12 \mathrm{~mm}$ long, light brown. Hilum linear, 1 length of caryopsis.

## Pappostipa vatroensis (F.A.Roig) Romaschenko. J. Bot. Res. Inst. Texas 2: 184 (2008).

Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online (as Stipa), U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Argentina. Basionym or Replaced Name: Stipa vatroensis F.A.Roig, Rev. Fac. Cienc. Agrar. Univ. Nac. Cuyo, 11: 40 (1966). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Argentina, Malalhue: Ruiz-Leal 21501 (MERL holo).

Recent Synonyms: Jarava vatroensis (F.A.Roig) Penail., Gayana, Bot. 59(1): 33 (2002).
Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 2 Pooideae (2012) (479), M.N.Correa, Flora Patagonica Parte III, Gramineae (1978) (302, Fig 195 as Stipa).

Derivation (Clifford \& Bostock 2007): L. -ensis, denoting origin. From Vatro, Argentina.
Classification. Subfamily Pooideae. Tribe: Stipeae.
Habit, Vegetative Morphology. Perennial, caespitose. Rhizomes elongated. Stolons present. Butt sheaths dark brown, pubescent. Culms $40-50 \mathrm{~cm}$ long, 3-4 -noded. Culm-internodes smooth or scaberulous, distally pubescent. Culm-nodes brown, glabrous. Leaf-sheaths mostly shorter than adjacent culm internode or longer than adjacent culm internode, pilose. Leaf-sheath oral hairs ciliate. Ligule an eciliate membrane, 6 mm long, 1 mm long on basal shoots. Leaf-blades flexuous, filiform, conduplicate, $10-15 \mathrm{~cm}$ long, 1 mm wide. Leaf-blade surface smooth, glabrous. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle, comprising 20-25 fertile spikelets. Panicle open, linear, 20-25 cm long. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $0.5-4 \mathrm{~mm}$ long, villous, hairy at tip, with 3 mm long hairs.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets lanceolate, subterete, $36-45 \mathrm{~mm}$ long, breaking up at maturity, disarticulating below each fertile floret. Floret callus elongated, curved, $2.5-3 \mathrm{~mm}$ long, pubescent, acute.

Glumes. Glumes persistent, similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate, $36-45 \mathrm{~mm}$ long, 1.1 length of upper glume, membranous, 1 -keeled, 1 -veined. Lower glume lateral veins absent. Lower glume apex attenuate. Upper glume lanceolate, $34-40 \mathrm{~mm}$ long, membranous, without keels, 3 -veined. Upper glume apex attenuate.

Florets. Fertile lemma lanceolate, subterete, $14-18 \mathrm{~mm}$ long, coriaceous, without keel, 5 -veined, more than 3-veined. Lemma surface pubescent. Lemma margins convolute, covering most of palea. Lemma apex awned, 1 -awned. Principal lemma awn geniculate, $100-165 \mathrm{~mm}$ long overall, with twisted column. Column of lemma awn 7-21 mm long, hirsute, hairy on lower part. Palea $9-13 \mathrm{~mm}$ long, without keels. Palea surface pubescent.

Flower and Fruit. Lodicules 3. Anthers 3, yellow, anther tip smooth. Stigmas 2. Ovary glabrous. Caryopsis with adherent pericarp, fusiform, 9 mm long. Hilum linear.

Distribution (TDWG). Continent. South America.
Country /Province /State. Southern South America. Argentina South.
Mendoza. La Pampa. Neuquén, Santa Cruz.

## Pappostipa zulmae (F.A.Roig) Ciald. Darwiniana 48 (2):173 (2010).

TYPE from Argentina. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Nequen, Picun Leufu, altacuencadel Canadon del Carzo, 13/12/1992. HT: MERL; IT: LP.

Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 2 Pooideae (2012) (480).

Parabambusa kainii Widjaja. Reinwardtia 11(2): 121 (1997).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).
$\mathrm{T}:<$ Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Irian Jaya, Yapen-Waropen District, Kainui, S. Enaweni, Widjaja 6642 (HT: BO; IT: K, L, US).

Illustrations: None found.
Classification. Subfamily Bambusoideae. Tribe: Bambuseae.
Habit, Vegetative Morphology. Perennial, woody bamboo, caespitose, clumped loosely. Rhizomes short, pachymorph. Butt sheaths absent. Culms leaning, 1500-2000 cm long, $10-30 \mathrm{~mm}$ diam., woody, without nodal roots. Culm-internodes terete, thin-walled, $50-65 \mathrm{~cm}$ long, mid-green, distally pruinose. Lateral branches dendroid, arising from upper culm. Bud complement 1. Branch complement three or several, in a clump, with 1 branch dominant, thinner than stem. Culm-sheaths present, deciduous but
leaving a persistent girdle (this scabrid), 12-13 cm long, glabrous, auriculate, with obtuse auricles, with 23 mm high auricles, setose on shoulders, shoulders with $6-10 \mathrm{~mm}$ long hairs. Culm-sheath ligule $2-3 \mathrm{~mm}$ high, dentate. Culm-sheath blade triangular, narrower than sheath, erect, $13.5-14.5 \mathrm{~cm}$ long, $45-55 \mathrm{~mm}$ wide, glabrous on surface. Leaf-sheath oral hairs setose, $5-8 \mathrm{~mm}$ long. Leaf-sheath auricles erect, 0.7 mm long. Ligule an eciliate membrane, 1 mm long, erose. Collar with external ligule. Leaf-blade base with a brief petiole-like connection to sheath. Leaf-blades deciduous at the ligule, lanceolate, $26.5-31 \mathrm{~cm}$ long, $39-60 \mathrm{~mm}$ wide. Leaf-blade surface glabrous. Leaf-blade apex acuminate.

Inflorescence. Synflorescence bractiferous, clustered at the nodes, in untidy tufts, with spathaceous subtending bracts, with axillary buds at base of spikelet, prophyllate below lateral spikelets, leafless between clusters.

Fertile Spikelets. Spikelets comprising 5-12 fertile florets, with diminished florets at the apex. Spikelets of 2 or more fertile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets lanceolate, laterally compressed, $25-52 \mathrm{~mm}$ long, breaking up at maturity, disarticulating below each fertile floret. Rhachilla internodes definite, $1-3 \mathrm{~mm}$ long, glabrous.

Glumes. Glumes two, persistent, similar, shorter than spikelet, similar to fertile lemma in texture. Lower glume ovate. Lower glume apex acute. Upper glume ovate. Upper glume apex acute.

Florets. Fertile lemma ovate, $9.5-12.5 \mathrm{~mm}$ long, without keel, more than 3-veined. Lemma margins ciliate. Lemma apex acuminate. Palea $10-13.5 \mathrm{~mm}$ long. Palea apex acute. Apical sterile florets resembling fertile though underdeveloped.

Flower and Fruit. Lodicules absent. Anthers 6. Stigmas 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Tropical Asia.
Country/Province /State. Papuasia. New Guinea.

## Paractaenum novae-hollandiae Beauv. Agrost. 47. t. 10 (1812).

Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), D.Sharp, D. \& B.K.Simon, AusGrass (2002).

Illustrations (Books): J.P.Jessop, G.R.M. Dashorst \& F.M.James, Grasses of South Australia (2006) (465, Fig 399 as subsp. reversum), C.A.Gardner, Flora of Western Australia, Vol 1, Part 1, Gramineae (1952) (247, Pl 73), S.W.L.Jacobs, R.D.B.Whalley \& D.J.B.Wheeler,, Grasses of New South Wales, 4th edn (2008) (319), J.C.Tothill,\& J.B.Hacker. The grasses of southern Queensland (1983) (324), D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002).

Illustrations (Journals): Kew Bulletin (1923: 288 (1923)).
Derivation (Clifford \& Bostock 2007): from New Holland, now Australia.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Annual, caespitose. Culms erect or decumbent, 30-60 cm long. Ligule a ciliolate membrane, 2-3 mm long. Leaf-blades $3-10 \mathrm{~cm}$ long, $2-6 \mathrm{~mm}$ wide, flaccid.

Inflorescence. Inflorescence composed of racemes. Racemes $3-12$, borne along a central axis, deflexed or spreading, unilateral, $1-6 \mathrm{~cm}$ long, bearing few fertile spikelets, bearing $1-4$ fertile spikelets on each. Central inflorescence axis $5-12 \mathrm{~cm}$ long, flattened. Rhachis deciduous from axis, narrowly winged, angular, scabrous on margins, terminating in a barren extension, extension subulate. Spikelet packing abaxial, distant. Raceme-bases cuneate, 3-7 mm long. Spikelets appressed, subtended by an involucre. Fertile spikelets pedicelled, 1 in the cluster. Involucre composed of bristles, $3.5-10 \mathrm{~mm}$ long. Involucral bristles deciduous with the fertile spikelets, few, 1 per spikelet (absent from distal spikelets), antrorsely scaberulous. Pedicels present, oblong, 0.5 mm long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong, dorsally compressed, obtuse, $3.5-5 \mathrm{~mm}$ long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.5 length of spikelet, membranous, without keels, 3-7 -veined. Lower glume apex truncate or obtuse. Upper glume ovate, membranous, without keels, 11 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea or without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 9-11-veined, acute. Fertile lemma
elliptic, 4 mm long, coriaceous, without keel. Lemma surface striate or punctate. Lemma margins involute. Palea coriaceous.

Flower and Fruit. Lodicules 2, cuneate, 0.6 mm long, fleshy, truncate. Anthers $3,1.75 \mathrm{~mm}$ long. Distribution (TDWG). Continent. Australasia.
Country /Province /State. Australia. Western Australia, Northern Territory, South Australia, Queensland, New South Wales.

Eremean. Central Australia. NW \& Lake Eyre, Southern. Inland. Western Plains.

Parafestuca albida (Lowe) E.B.Alekseev. Byull. Mosk. Obshch. Ispyt. Prir., Biol., 90(5): 108 (1985).
Accepted by: U.Quattrocchi, CRC World Dictionary of Grasses (2006).
TYPE from Madeira. Basionym or Replaced Name: Festuca albida Lowe, Trans. Cambridge Philos. Soc. 4: 10 (1831). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: LT: R. T. Lowe s.n., 5 Jun 1828, Madeira: Ribeiro Frio, Ribeira d'Metade (K-307994). LT designated by Quintanar, Catalan \& Castroviejo, Taxon 55(3): 668 (2006).

Recent Synonyms: Koeleria loweana Quintanar, Catalán \& Castrov., Taxon 55(3): 668 (2006).
Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. whitish. Plant in whole or in part white usually due to an indumentum of short hairs.

Classification. Subfamily Pooideae. Tribe: Poeae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths persistent and investing base of culm, with fibrous dead sheaths. Basal innovations intravaginal. Culms $25-100 \mathrm{~cm}$ long. Culm-internodes distally pubescent. Ligule an eciliate membrane, $0.8-2 \mathrm{~mm}$ long. Leaf-blades flat or convolute, $20-50 \mathrm{~cm}$ long, $3-10 \mathrm{~mm}$ wide.

Inflorescence. Inflorescence a panicle. Peduncle pubescent above. Panicle contracted, lanceolate, 1535 cm long. Panicle branches pilose. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 2-3 fertile florets, with diminished florets at the apex. Spikelets of 2 or more fertile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets cuneate, laterally compressed, 6-8(-10) mm long, breaking up at maturity, disarticulating below each fertile floret. Rhachilla internodes pubescent. Floret callus pubescent.

Glumes. Glumes persistent, similar, shorter than spikelet, thinner than fertile lemma. Lower glume lanceolate, $5.5-8 \mathrm{~mm}$ long, 0.9 length of upper glume, membranous, without keels, 1 -veined. Lower glume primary vein scabrous. Lower glume lateral veins absent. Lower glume apex acute. Upper glume lanceolate, $6.5-9 \mathrm{~mm}$ long, 0.9 length of adjacent fertile lemma, membranous, with hyaline margins, without keels, 3 veined. Upper glume primary vein scabrous. Upper glume apex acute.

Florets. Fertile lemma obovate, 6-9 mm long, chartaceous, much thinner on margins, without keel, 3 veined, $0-3$-veined. Lemma midvein scabrous. Lemma surface asperulous. Lemma apex acute. Palea keels scabrous. Apical sterile florets resembling fertile though underdeveloped.

Flower and Fruit. Lodicules 2, glabrous, 2-toothed. Anthers 3, $2.5-3.5 \mathrm{~mm}$ long. Ovary glabrous. Caryopsis with adherent pericarp. Hilum elliptic, $0.2-0.25$ length of caryopsis.

Distribution (TDWG). Continent. Africa.
Country /Province/State. Macaronesia. Madeira.

Parahyparrhenia annua (Hack.) Clayton. Kew Bull. xx. 434 (1966).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Sudan. Basionym or Replaced Name: Andropogon annuus Hack., Flora 68(8): 137 (1885)
. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: G.A. Schweinfurth 183. III, 1885, Sudan (W; IT: P, US-76095).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. annual. Annuals.
Classification. Subfamily Panicoideae. Tribe: Sacchareae. Subtribe Anthistiriinae.

Habit, Vegetative Morphology. Annual, caespitose. Culms erect, 30-160 cm long. Leaf-sheath auricles erect, $2-5 \mathrm{~mm}$ long. Ligule an eciliate membrane, $2-5 \mathrm{~mm}$ long. Leaf-blades $5-45 \mathrm{~cm}$ long, 1-6 mm wide.

Inflorescence. Inflorescence composed of racemes, subtended by a spatheole. Spatheole linear, 6-15 cm long, herbaceous. Racemes (1-)2, paired, $2-6 \mathrm{~cm}$ long, bearing few fertile spikelets, bearing 4-7 fertile spikelets on each. Rhachis fragile at the nodes, ciliate on margins. Rhachis internodes filiform. Rhachis internode tip oblique, flat. Raceme-bases filiform, unequal (the longer measured), 3-6 mm long, glabrous. Spikelets in pairs. Fertile spikelets sessile, 1 in the cluster. Companion sterile spikelets pedicelled, 1 in the cluster. Pedicels present, filiform, ciliate.

Sterile Spikelets. Basal sterile spikelets well-developed, 2 in number (lower raceme), 0 in upper racemes, barren, smaller than fertile. Basal sterile spikelet lower glume muticous, lemmas awnless.

Companion sterile spikelets well-developed, comprising 2 subequal glumes without lemmas or containing empty lemmas or male, lanceolate, $5-11 \mathrm{~mm}$ long, as long as fertile, separately deciduous. Companion sterile spikelet callus indistinct or oblong ( $0-0.5 \mathrm{~mm}$ ), obtuse. Companion sterile spikelet glumes coriaceous, awned, with $1-9 \mathrm{~mm}$ long awn.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets linear, subterete, $5-12 \mathrm{~mm}$ long, falling entire, deciduous with accessory branch structures. Spikelet callus cuneate, $1-4 \mathrm{~mm}$ long, pilose, base pungent, attached obliquely. Spikelet callus hairs white or red.

Glumes. Glumes dissimilar, exceeding apex of florets, firmer than fertile lemma. Lower glume oblong, 1 length of spikelet, coriaceous, without keels. Lower glume surface with a longitudinal median groove. Upper glume oblong, coriaceous. Upper glume muticous or awned, awn $0-10 \mathrm{~mm}$ long.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret oblong, hyaline, 2 -veined, ciliolate on margins. Fertile lemma oblong, 4 mm long, hyaline, without keel, 3 -veined, $0-3$-veined. Lemma margins ciliolate, hairy above. Lemma apex dentate, 2 -fid, incised 0.1 of lemma length, awned, 1 -awned. Principal lemma awn from a sinus, geniculate, $35-100 \mathrm{~mm}$ long overall, with twisted column. Column of lemma awn pubescent. Palea absent or minute.

Distribution (TDWG). Continent. Africa.
Country /Province /State. West Tropical Africa, West-Central Tropical Africa, Northeast Tropical Africa. Burkina, Ghana, Ivory Coast, Mali, Senegal, Sierre Leone. Central African Republic. Chad, Sudan.

Parahyparrhenia bellariensis (Hack.) Clayton. Kew Bull. 27(3): 448 (1972).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), N.L.Bor, Grasses of Burma, Ceylon, India and Pakistan (1960) (as Heteropogon).

TYPE from India. Basionym or Replaced Name: Andropogon bellariensis Hack., Flora 68(7): 123 (1885)
. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: IT: Wright 2321, no date, India: Mysore (K, US-76448 (fragm. ex L)).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. -ensis, denoting origin. From Bellary, Deccan Plateau, India. Classification. Subfamily Panicoideae. Tribe: Sacchareae. Subtribe Anthistiriinae.
Habit, Vegetative Morphology. Caespitose. Culms erect, $60-90 \mathrm{~cm}$ long. Ligule a fringe of hairs. Leaf-blades filiform, convolute, $7-20 \mathrm{~cm}$ long, $1-3 \mathrm{~mm}$ wide.

Inflorescence. Inflorescence composed of racemes, subtended by a spatheole, enclosed. Spatheole linear, $8-9 \mathrm{~cm}$ long, herbaceous. Racemes 1, single, $5-6 \mathrm{~cm}$ long, bearing few fertile spikelets, bearing 912 fertile spikelets on each. Rhachis fragile at the nodes, flattened, ciliate on margins. Rhachis internodes filiform. Rhachis internode tip oblique, flat. Spikelets in pairs. Fertile spikelets sessile, 1 in the cluster. Companion sterile spikelets pedicelled, 1 in the cluster. Pedicels present, filiform, flattened, ciliate.

Sterile Spikelets. Basal sterile spikelets well-developed, 4-6 in number, male, lanceolate, equalling fertile. Basal sterile spikelet lower glume muticous, lemmas awnless.

Companion sterile spikelets well-developed, male, lanceolate, 8 mm long, longer than fertile, separately deciduous. Companion sterile spikelet callus square, obtuse. Companion sterile spikelet glumes coriaceous, 7 -veined, muticous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate, subterete, $8-9 \mathrm{~mm}$ long, falling entire, deciduous with accessory branch structures. Spikelet callus cuneate, $1-1.5 \mathrm{~mm}$ long, pilose, base acute, attached obliquely. Spikelet callus hairs white.

Glumes. Glumes dissimilar, exceeding apex of florets, firmer than fertile lemma. Lower glume elliptic, 1 length of spikelet, coriaceous, without keels, keel-less except near apex. Lower glume surface with a longitudinal median groove. Lower glume apex dentate, 2 -fid. Upper glume lanceolate, coriaceous. Upper glume margins ciliolate. Upper glume muticous.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret lanceolate, hyaline. Fertile lemma linear, 3 mm long, chartaceous, without keel, 1 -veined, $0-3$-veined, one-veined. Lemma apex dentate, 2 -fid, incised 0.1 of lemma length, awned, 1 -awned. Principal lemma awn from a sinus, geniculate, $25-40 \mathrm{~mm}$ long overall, with twisted column. Column of lemma awn hirsute, hairy on the spiral, with $1-1.5 \mathrm{~mm}$ long hairs. Palea absent or minute.

Distribution (TDWG). Continent. Tropical Asia.
Country /Province /State. Indian Subcontinent. India.
Tamilnadu.

Parahyparrhenia laegaardii Veldkamp. Blumea 48:499 (2003).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Thailand. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Thailand, Ubong Ratchathani: Laegaard et al. 21836 (AAU holo, QBG).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): In honor of Simon Laegaard (1933-) Danish botanist.
Classification. Subfamily Panicoideae. Tribe: Sacchareae. Subtribe Anthistiriinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rootstock evident. Basal innovations intravaginal. Culms $70-95 \mathrm{~cm}$ long. Culm-nodes glabrous. Lateral branches lacking. Leaf-sheath oral hairs ciliate. Ligule a fringe of hairs. Leaf-blades ascending or spreading or reflexed, flat or involute, 5.5-12.5 cm long, 2-3.5 mm wide. Leaf-blade surface glabrous.

Inflorescence. Inflorescence composed of racemes, subtended by a spatheole. Spatheole linear, herbaceous. Racemes $1-2$, single or paired, $3-7 \mathrm{~cm}$ long. Rhachis fragile at the nodes, ciliate on margins. Rhachis internodes linear, $3-4 \mathrm{~mm}$ long, 0.66 length of fertile spikelet. Rhachis internode tip oblique, flat. Raceme-bases filiform, subequal, $6.5-9 \mathrm{~mm}$ long, glabrous. Spikelets in pairs. Fertile spikelets sessile, 1 in the cluster. Companion sterile spikelets pedicelled, 1 in the cluster. Pedicels present, filiform, $4-5 \mathrm{~mm}$ long.

Sterile Spikelets. Basal sterile spikelets well-developed, 8-14 in number.
Companion sterile spikelets well-developed, containing empty lemmas or male, linear, shorter than fertile, separately deciduous. Companion sterile spikelet callus linear, $1-2 \mathrm{~mm}$ long, obtuse. Companion sterile spikelet glumes coriaceous, sulcate, awned, one glume awned (upper), with 5 mm long awn. Companion sterile spikelet lemmas 2 , enclosed by glumes, 1 -awned, with 8 mm long awn.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets linear, subterete, $6-6.5 \mathrm{~mm}$ long, falling entire, deciduous with accessory branch structures. Spikelet callus cuneate, $1.8-2.5 \mathrm{~mm}$ long, pubescent, base pungent, attached obliquely. Spikelet callus hairs white, 0.5 mm long.

Glumes. Glumes dissimilar, exceeding apex of florets, firmer than fertile lemma. Lower glume elliptic, $5-6.5 \mathrm{~mm}$ long, 1 length of spikelet, coriaceous, without keels, 3(-4) -veined. Lower glume surface with a longitudinal median groove, pilose, hairy above. Lower glume apex dentate, 2 -fid. Upper glume elliptic, $6-6.5 \mathrm{~mm}$ long, coriaceous, 1 -veined. Upper glume lateral veins absent. Upper glume apex dentate, 2 -fid, awned, 1 -awned, awn $7-8.5 \mathrm{~mm}$ long.

Florets. Basal sterile florets 1, with vestigial lower floret. Fertile lemma oblong, 6 mm long, hyaline, without keel, $0-3$-veined. Lemma apex dentate, 2 -fid, awned, 1 -awned. Principal lemma awn from a
sinus, geniculate, 45-52 mm long overall, with $20-25 \mathrm{~mm}$ long limb, with twisted column, limb puberulous. Column of lemma awn $25-27 \mathrm{~mm}$ long, puberulous. Palea lanceolate, 4 mm long.

Flower and Fruit. Anthers 3, 2.8-3.7 mm long, yellow.
Distribution (TDWG). Continent. Tropical Asia.
Country /Province/State. Indo-China. Thailand.

Parahyparrhenia perennis Clayton. Kew Bull. xx. 436 . (1966).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online.
TYPE from Guinea. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Guinee, Conakry: Adam 12595 (K holo).

Illustrations (Books): F.N.Hepper, F.W.T.A. 3(2) (1972) (497, Fig.457).
Derivation (Clifford \& Bostock 2007): L. persisting for several years. Perennials.
Classification. Subfamily Panicoideae. Tribe: Sacchareae. Subtribe Anthistiriinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, $60-80 \mathrm{~cm}$ long, 1 mm diam. Leafsheath auricles erect, 2 mm long. Ligule an eciliate membrane, 2 mm long. Leaf-blades filiform, convolute, $10-30 \mathrm{~cm}$ long, $1-1.5 \mathrm{~mm}$ wide.

Inflorescence. Inflorescence composed of racemes, subtended by a spatheole. Spatheole linear, 6-9 cm long, herbaceous. Racemes 2, paired, 3 cm long, bearing few fertile spikelets, bearing $4-7$ fertile spikelets on each. Rhachis fragile at the nodes, ciliate on margins. Rhachis internodes filiform. Rhachis internode tip oblique, flat, with lobed rim. Raceme-bases filiform, unequal (the longer measured), 4 mm long, glabrous. Spikelets in pairs. Fertile spikelets sessile, 1 in the cluster. Companion sterile spikelets pedicelled, 1 in the cluster. Pedicels present, filiform, ciliate.

Sterile Spikelets. Basal sterile spikelets well-developed, 2 in number (lower raceme), 0 in upper racemes, barren, larger than fertile. Basal sterile spikelet lower glume muticous, lemmas awnless.

Companion sterile spikelets well-developed, comprising 2 subequal glumes without lemmas or containing empty lemmas or male, lanceolate, $5-6 \mathrm{~mm}$ long, as long as fertile, separately deciduous. Companion sterile spikelet callus indistinct, obtuse. Companion sterile spikelet glumes coriaceous, awned, with $0.7-3 \mathrm{~mm}$ long awn.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets linear, subterete, $4.5-6 \mathrm{~mm}$ long, falling entire, deciduous with accessory branch structures. Spikelet callus cuneate, $0.8-1.3 \mathrm{~mm}$ long, pilose, base pungent, attached obliquely. Spikelet callus hairs red.

Glumes. Glumes dissimilar, exceeding apex of florets, firmer than fertile lemma. Lower glume oblong, 1 length of spikelet, coriaceous, without keels. Lower glume surface with a longitudinal median groove. Upper glume oblong, coriaceous. Upper glume awned, awn 6-10 mm long.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret oblong, hyaline, 2 -veined, ciliolate on margins. Fertile lemma oblong, 3 mm long, hyaline, without keel, 3 -veined, $0-3$-veined. Lemma margins ciliolate, hairy above. Lemma apex dentate, 2 -fid, incised 0.1 of lemma length, awned, 1 -awned. Principal lemma awn from a sinus, geniculate, 2.7-3.4 mm long overall, with twisted column. Column of lemma awn pubescent. Palea absent or minute.

Distribution (TDWG). Continent. Africa.
Country /Province/State. West Tropical Africa. Guinea, Liberia, Senegal.

Parahyparrhenia siamensis Clayton. Dansk Bot. Arkiv, xxvii. No. 1, 69 . (1969).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Thailand. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Thailand, Satul: Kerr 13715 (K holo, BKF).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From Siam, now Thailand.
Classification. Subfamily Panicoideae. Tribe: Sacchareae. Subtribe Anthistiriinae.

Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, 50 cm long. Leaf-sheaths pilose. Ligule a fringe of hairs, 0.2 mm long. Leaf-blades involute, $5-12 \mathrm{~cm}$ long, $1-1.5 \mathrm{~mm}$ wide. Leaf-blade surface pilose, hairy on both sides.

Inflorescence. Inflorescence composed of racemes, subtended by a spatheole. Spatheole linear, 9-11 cm long, herbaceous. Racemes 1-2, single or paired, $4-5 \mathrm{~cm}$ long, bearing few fertile spikelets, bearing 47 fertile spikelets on each. Rhachis fragile at the nodes, ciliate on margins. Rhachis internodes filiform. Rhachis internode tip oblique, flat. Raceme-bases filiform, subequal, 7 mm long, glabrous. Spikelets in pairs. Fertile spikelets sessile, 1 in the cluster. Companion sterile spikelets pedicelled, 1 in the cluster. Pedicels present, filiform, ciliate.

Sterile Spikelets. Basal sterile spikelets absent.
Companion sterile spikelets well-developed, male, linear, 5-6 mm long, shorter than fertile, separately deciduous. Companion sterile spikelet callus oblong ( 0.5 mm ), obtuse. Companion sterile spikelet glumes coriaceous, sulcate, pilose (above), awned, one glume awned (upper), with $2-3 \mathrm{~mm}$ long awn. Companion sterile spikelet lemmas 2 , enclosed by glumes, 1 -awned, with 3 mm long awn.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets linear, subterete, $8-9.5 \mathrm{~mm}$ long, falling entire, deciduous with accessory branch structures. Spikelet callus cuneate, 2-3 mm long, pilose, base pungent, attached obliquely. Spikelet callus hairs white.

Glumes. Glumes dissimilar, exceeding apex of florets, firmer than fertile lemma. Lower glume elliptic, 1 length of spikelet, coriaceous, without keels, 6 -veined. Lower glume surface with a longitudinal median groove, pilose, hairy above. Lower glume margins ciliate. Lower glume apex mucronate, 2 -awned, awn 1.5 mm long. Upper glume elliptic, coriaceous, 5 -veined. Upper glume margins ciliate. Upper glume awned, awn 6-9 mm long.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret lanceolate, $2.5-3.5 \mathrm{~mm}$ long, hyaline. Fertile lemma oblong, 3 mm long, hyaline, without keel, $0-3$-veined. Lemma apex lobed, 2 -fid, incised 0.5 of lemma length, awned, 1 -awned. Principal lemma awn from a sinus, geniculate, $40-50 \mathrm{~mm}$ long overall, with twisted column. Column of lemma awn hispidulous, hairy on the spiral. Palea absent or minute.

Flower and Fruit. Anthers 3, 4 mm long.
Distribution (TDWG). Continent. Tropical Asia.
Country /Province /State. Indo-China. Thailand.

Parahyparrhenia tridentata Clayton. Kew Bull., 35(4): 816 (1981).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Thailand. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Thailand: Sam Roi Yawt, Put 2480 (HT: K).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. tria, three; dens, tooth; -ata, possessing. One or both glumes three-toothed.

Classification. Subfamily Panicoideae. Tribe: Sacchareae. Subtribe Anthistiriinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, 20-70 cm long. Ligule an eciliate membrane. Leaf-blades $5-13 \mathrm{~cm}$ long, $1-3 \mathrm{~mm}$ wide. Leaf-blade surface glabrous.

Inflorescence. Inflorescence composed of racemes, subtended by a spatheole. Spatheole linear, $4-5 \mathrm{~cm}$ long, herbaceous. Racemes 1 , single, 1.5 cm long, bearing few fertile spikelets, bearing 5-7 fertile spikelets on each. Rhachis fragile at the nodes, pubescent on margins. Rhachis internodes filiform. Rhachis internode tip oblique, flat. Spikelets in pairs. Fertile spikelets sessile, 1 in the cluster. Companion sterile spikelets pedicelled, 1 in the cluster. Pedicels present, filiform, glabrous.

Sterile Spikelets. Basal sterile spikelets well-developed, 2-4 in number, barren. Basal sterile spikelet lower glume muticous, lemmas awnless.

Companion sterile spikelets well-developed, lanceolate, 5 mm long, shorter than fertile, separately deciduous. Companion sterile spikelet callus indistinct, obtuse. Companion sterile spikelet glumes herbaceous, lobed (tridentate), muticous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets linear, subterete, $6-8 \mathrm{~mm}$ long, falling entire, deciduous with accessory branch structures. Spikelet callus cuneate, 1 mm long, pilose, base acute, attached obliquely. Spikelet callus hairs dark brown.

Glumes. Glumes dissimilar, exceeding apex of florets, firmer than fertile lemma. Lower glume lanceolate, 1 length of spikelet, coriaceous, without keels. Lower glume surface convex. Lower glume apex dentate, 3 -fid. Upper glume lanceolate, coriaceous. Upper glume muticous.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret lanceolate, $3-4 \mathrm{~mm}$ long, hyaline. Fertile lemma linear, $4-5 \mathrm{~mm}$ long, hyaline, without keel, 1 -veined, $0-3$ -veined, one-veined. Lemma apex dentate, 2 -fid, awned, 1 -awned. Principal lemma awn from a sinus, geniculate, $20-35 \mathrm{~mm}$ long overall, with twisted column. Column of lemma awn pubescent. Palea absent or minute.

Distribution (TDWG). Continent. Tropical Asia.
Country /Province/State. Indo-China. Thailand.

Paraneurachne muelleri (Hack.) S. T. Blake. Contrib. Queensl. Herb., 13: 21 (1972).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), D.Sharp, D. \& B.K.Simon, AusGrass (2002).

TYPE from Australia. Basionym or Replaced Name: Neurachne muelleri Hack., Prodr. 196 (1810). $\mathrm{T}:<$ Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Australia: Mueller (W holo, MEL).

Dashorst \& F.M.James, Grasses of South Australia (2006) (503, Fig 432), C.A.Gardner, Flora of Western Australia, Vol 1, Part 1, Gramineae (1952) (272, Pl 78 as Neruachne clementii), J.C.Tothill,\& J.B.Hacker. The grasses of southern Queensland (1983) (326), D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002).

Illustrations (Journals): Contr.Qld.Herb. (13:44, Fig. 4 (1972)).
Images: D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002);.
Derivation (Clifford \& Bostock 2007): in honor of Ferdinand Jacob Heinrich Mueller (1825-96) German-born Australian botanist.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Neurachninae.
Habit, Vegetative Morphology. Perennial, caespitose. Stolons present. Culms erect, 30-45 cm long, $0.7-1.2 \mathrm{~mm}$ diam. Culm-nodes pubescent. Leaf-sheaths pubescent, outer margin hairy. Ligule a fringe of hairs, $0.5-0.8 \mathrm{~mm}$ long. Leaf-blades $1-12 \mathrm{~cm}$ long, 2-4 mm wide. Leaf-blade surface pubescent. Leafblade margins scaberulous.

Inflorescence. Inflorescence a panicle. Panicle spiciform, oblong, 2.7-3.5 cm long, $1.5-2.5 \mathrm{~cm}$ wide. Primary panicle branches accrescent to a central axis, with lateral stumps on axis. Panicle axis pubescent. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, cuneate, $0.25-0.7 \mathrm{~mm}$ long, tip oblique.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, $7.4-12 \mathrm{~mm}$ long, falling entire. Spikelet callus bearded. Spikelet callus hairs 0.5 length of spikelet.

Glumes. Glumes dissimilar, exceeding apex of florets, firmer than fertile lemma. Lower glume ovate, $0.8-1$ length of spikelet, membranous, without keels, 5-7-veined. Lower glume lateral veins ribbed. Lower glume margins setose (above). Lower glume apex acuminate, awned, 1 -awned, awn $1-1.5 \mathrm{~mm}$ long. Upper glume ovate, $7.4-12 \mathrm{~mm}$ long, coriaceous, much thinner above, without keels, 11-13-veined. Upper glume surface pubescent, hairy below. Upper glume margins ciliate. Upper glume apex acuminate, awned, 1 awned, awn $0.35-2.5 \mathrm{~mm}$ long.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret ovate, gibbous, 5.5-7 mm long, 0.75 length of spikelet, coriaceous, much thinner above, 7 -veined, ribbed, puberulous, acute. Fertile lemma ovate, $5.5-7 \mathrm{~mm}$ long, cartilaginous, much thinner above, without keel, 5-7 -veined, more than 3 -veined. Lemma apex rostrate. Palea 1 length of lemma, cartilaginous, 2 -veined.

Flower and Fruit. Lodicules 2, cuneate, fleshy. Anthers 3, 3.5-4.35 mm long. Stigmas 2. Caryopsis with adherent pericarp, obovoid, dorsally compressed, 2.1-3.25 mm long. Embryo 0.5 length of caryopsis. Hilum punctiform.
$2 n=36$ ( 1 ref TROPICOS).
Distribution (TDWG). Continent. Australasia.
Country /Province /State. Australia. Western Australia, Northern Territory, South Australia, Queensland.

Kimberley, Eremean. Victoria R \& Barkly Tableland, Central Australia. NW \& Lake Eyre. North, Central, Inland.

## Parapholis filiformis (Roth) C.E.Hubb. Blumea, Suppl. 3, 14 (1946).

Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), T.G.Tutin et al, Flora Europaea 5 (1980).

TYPE from Germany. Basionym or Replaced Name: Rottboellia filiformis Roth, Supplementum Plantarum 13, 114 (1781) [1782]. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Germany, Cult. by Roth: Schreber (K iso).

Illustrations (Books): N.Feinbrun-Dothan, Flora Palaestina 4 (1986) (Pl. 336).
Derivation (Clifford \& Bostock 2007): L. filium, thread; forma, shape. Leaf-blades narrow.
Classification. Subfamily Pooideae. Tribe: Poeae.
Habit, Vegetative Morphology. Annual, caespitose. Culms erect or geniculately ascending, 5-25 cm long. Ligule an eciliate membrane. Leaf-blades convolute, $1-2 \mathrm{~mm}$ wide. Leaf-blade surface ribbed, scaberulous, rough adaxially. Leaf-blade margins scaberulous.

Inflorescence. Inflorescence composed of racemes. Racemes 1, single, ragged or smoothly terete, bilateral, $5-10 \mathrm{~cm}$ long, bearing 10-20 fertile spikelets on each. Rhachis fragile at the nodes, subcylindrical and excavated. Spikelet packing broadside to rhachis, lax. Rhachis internodes oblong, 0.9 length of fertile spikelet. Rhachis internode tip transverse. Spikelets sunken, solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets oblong, laterally compressed, $4-6 \mathrm{~mm}$ long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes collateral, similar, exceeding apex of florets, firmer than fertile lemma. Lower glume lanceolate, $4-6 \mathrm{~mm}$ long, 1 length of upper glume, coriaceous, 1 -keeled, winged on keel, 3-5 -veined. Lower glume lateral veins ribbed. Lower glume apex acuminate. Upper glume lanceolate, 4-6 mm long, 1.1 length of adjacent fertile lemma, coriaceous, 1 -keeled, winged on keel, 3-5 -veined. Upper glume lateral veins ribbed. Upper glume apex acuminate.

Florets. Fertile lemma oblong, $3.5-5.5 \mathrm{~mm}$ long, membranous, without keel, 3 -veined, $0-3$-veined. Lemma surface scaberulous, rough above. Lemma apex obtuse. Palea 1 length of lemma. Palea surface scaberulous.

Flower and Fruit. Anthers 3, (2-)2.5-3.5 mm long. Caryopsis with adherent pericarp, ellipsoid, 3 mm long. Hilum elliptic. Endosperm liquid.
$2 n=14$ ( 1 ref TROPICOS).
Distribution (TDWG). Continent. Europe, Africa, Temperate Asia.
Region. Northern Europe (*), Southwestern Europe, Southeastern Europe.
Country /Province /State. : GB Aliens (Ryves et al). : Baleares, Corsica, France, Portugal, Sardinia, Spain. : Albania, Greece, Italy, Crete, Sicily, Turkey Europe, Yugoslavia. Northern Africa, Macaronesia. Algeria, Egypt, Morocco. Madeira. Western Asia. East Aegean Is, Palestine, Israel \& Jordan, Turkey.

Parapholis gracilis Bor. Notes Roy. Bot. Gard. Edinb. xxv. 63 (1963).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Iraq. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Iraq, Kirkuk: Helbaek 1293 (K holo).

Illustrations (Books): N.L.Bor, Gramineae in Flora of $\operatorname{Iraq}$ (1968) (267, Pl. 92).
Derivation (Clifford \& Bostock 2007): L. slender. Culms or inflorescences slender.
Classification. Subfamily Pooideae. Tribe: Poeae.
Habit, Vegetative Morphology. Perennial. Culms erect or geniculately ascending, slender, 15-30 cm long. Culm-internodes smooth, distally glabrous. Ligule an eciliate membrane. Leaf-blades $0.3-6 \mathrm{~cm}$ long,
$1-1.5 \mathrm{~mm}$ wide, flaccid. Leaf-blade surface scaberulous, rough on both sides. Leaf-blade margins scaberulous.

Inflorescence. Inflorescence composed of racemes. Racemes 1, single, straight, smoothly terete, bilateral, 6-18 cm long. Rhachis fragile at the nodes, subcylindrical and excavated. Spikelet packing broadside to rhachis. Rhachis internodes oblong. Rhachis internode tip transverse. Spikelets sunken, solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets oblong, laterally compressed, $4.5-5.5 \mathrm{~mm}$ long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes collateral, similar, exceeding apex of florets, firmer than fertile lemma. Lower glume oblong, $4.5-5.5 \mathrm{~mm}$ long, 1 length of upper glume, coriaceous, without keels, 3 -veined. Lower glume lateral veins ribbed. Lower glume apex acuminate. Upper glume oblong, $4.5-5.5 \mathrm{~mm}$ long, 1.1 length of adjacent fertile lemma, coriaceous, without keels, 3 -veined. Upper glume lateral veins ribbed. Upper glume apex acuminate.

Florets. Fertile lemma elliptic or oblong, 4-4.5 mm long, membranous, without keel, 3 -veined, 0-3veined. Palea 1 length of lemma.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Temperate Asia.
Country /Province /State. Western Asia. Iran, Iraq.

Images: D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002);, E.Edgar \& H.E.Connor, Flora of New Zealand 5, Gramineae (2000);.

Derivation (Clifford \& Bostock 2007): L. bowed. Inflorescences curved spikes.
Classification. Subfamily Pooideae. Tribe: Poeae.

Habit, Vegetative Morphology. Annual, caespitose. Culms geniculately ascending, 2-20 cm long. Ligule an eciliate membrane, $0.5-1 \mathrm{~mm}$ long. Leaf-blades $0.4-3 \mathrm{~cm}$ long, $1-2 \mathrm{~mm}$ wide. Leaf-blade surface scaberulous, rough adaxially. Leaf-blade margins scaberulous.

Inflorescence. Inflorescence composed of racemes. Racemes 1, single, incurved, smoothly terete, bilateral, $1-8 \mathrm{~cm}$ long. Rhachis fragile at the nodes, subcylindrical and excavated, $1-2 \mathrm{~mm}$ wide. Spikelet packing broadside to rhachis, lax. Rhachis internodes oblong, $2.5-5 \mathrm{~mm}$ long. Rhachis internode tip transverse. Spikelets sunken, solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets oblong, laterally compressed, $4-6 \mathrm{~mm}$ long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes collateral, similar, exceeding apex of florets, firmer than fertile lemma. Lower glume lanceolate, 4-6 mm long, 1 length of upper glume, coriaceous, without keels, 3-4 -veined. Lower glume lateral veins ribbed. Lower glume apex acute. Upper glume lanceolate, $4-6 \mathrm{~mm}$ long, 1.1 length of adjacent fertile lemma, coriaceous, without keels, 3-4 -veined. Upper glume lateral veins ribbed. Upper glume apex acute.

Florets. Fertile lemma ovate, $3.5-5.5 \mathrm{~mm}$ long, membranous, without keel, 3 -veined, $0-3$-veined. Lemma lateral veins less than two thirds length of lemma. Lemma apex acute. Palea 1 length of lemma.

Flower and Fruit. Anthers 3, $0.5-1 \mathrm{~mm}$ long. Caryopsis with adherent pericarp, ellipsoid. Hilum elliptic. Endosperm liquid.

## Parapholis marginata Runemark. Bot. Notiser, cxv. 8. 14 (1962).

Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), T.G.Tutin et al, Flora Europaea 5 (1980).

TYPE from Greece. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Greece, Cyclades, Sirina: Runemark \& Nordenstam (LD holo).

Illustrations (Books): L.Boulos, Flora of Egypt 4 (2005) (154, Fig 43).
Images: L.Boulos, Flora of Egypt 4 (2005);.
Derivation (Clifford \& Bostock 2007): L. margo, border; -ata, possessing. Leaf-blades or lemma with hairs in their margins or the margins otherwise conspicuous.

Classification. Subfamily Pooideae. Tribe: Poeae.
Habit, Vegetative Morphology. Annual, caespitose. Culms erect, 5-15 cm long. Leaf-sheaths inflated. Ligule an eciliate membrane. Leaf-blades convolute, $1-2 \mathrm{~mm}$ wide. Leaf-blade surface ribbed, scaberulous, rough adaxially. Leaf-blade margins scaberulous.

Inflorescence. Inflorescence composed of racemes, subtended by an inflated leaf-sheath, embraced at base by subtending leaf. Racemes 1 , single, smoothly terete, bilateral, $2-6 \mathrm{~cm}$ long, bearing $5-10$ fertile spikelets on each. Rhachis fragile at the nodes, subcylindrical and excavated. Spikelet packing broadside to
rhachis, lax. Rhachis internodes oblong, 0.5-0.6 length of fertile spikelet. Rhachis internode tip transverse. Spikelets sunken, solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets oblong, laterally compressed, $4-6 \mathrm{~mm}$ long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes collateral, similar, exceeding apex of florets, firmer than fertile lemma. Lower glume lanceolate or ovate, 4-6 mm long, 1 length of upper glume, coriaceous, 1-keeled, winged on keel, 3-5 veined. Lower glume lateral veins ribbed. Lower glume apex acute. Upper glume lanceolate or ovate, 4-6 mm long, 1.1 length of adjacent fertile lemma, coriaceous, 1 -keeled, winged on keel, 3-5 -veined. Upper glume lateral veins ribbed. Upper glume apex acute.

Florets. Fertile lemma oblong, $3.5-5.5 \mathrm{~mm}$ long, membranous, without keel, 3 -veined, 0-3 -veined. Lemma apex acute. Palea 1 length of lemma. Palea surface smooth.

Flower and Fruit. Anthers 3, $0.4-0.8 \mathrm{~mm}$ long. Caryopsis with adherent pericarp, ellipsoid, 2-2.5 mm long. Hilum elliptic. Endosperm liquid.

Distribution (TDWG). Continent. Europe, Africa, Temperate Asia.
Region. Southwestern Europe, Southeastern Europe.
Country /Province /State. : Baleares. : Greece, Crete, Sicily. Northern Africa. Egypt, Libya. Western Asia. Cyprus, Lebanon-Syria, Palestine, Israel \& Jordan.

## Parapholis pyenantha (Hack.) C.E.Hubb. Blumea, Suppl. 3, 14 (1946).

Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, T.G.Tutin et al, Flora Europaea 5 (1980).

TYPE from Britain. Basionym or Replaced Name: Lepturus filiformis var. pycnanthus Hack., Rept. Bot. Exch. Cl. Brit. Is. 1903:33 (1904). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Britain, Iver: Druce (W holo).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): Gk. pyknos, thick; anthos, flower. Spikelets relatively broad.
Classification. Subfamily Pooideae. Tribe: Poeae.
Habit, Vegetative Morphology. Annual, caespitose. Culms erect, $15-35 \mathrm{~cm}$ long. Ligule an eciliate membrane. Leaf-blades flat, $1-2 \mathrm{~mm}$ wide. Leaf-blade surface ribbed, scaberulous, rough adaxially. Leafblade margins scaberulous.

Inflorescence. Inflorescence composed of racemes, subtended by an inflated leaf-sheath, embraced at base by subtending leaf. Racemes 1 , single, ragged or smoothly terete, bilateral, $8-20 \mathrm{~cm}$ long, bearing 1530 fertile spikelets on each. Rhachis fragile at the nodes, subcylindrical and excavated. Spikelet packing broadside to rhachis, lax. Rhachis internodes oblong, 0.5 length of fertile spikelet. Rhachis internode tip transverse. Spikelets sunken, solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets oblong, laterally compressed, 6-9 mm long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes collateral, similar, exceeding apex of florets, firmer than fertile lemma. Lower glume lanceolate, $6-9 \mathrm{~mm}$ long, 1 length of upper glume, coriaceous, without keels, 3-5 -veined. Lower glume lateral veins ribbed. Lower glume apex acuminate. Upper glume lanceolate, $6-9 \mathrm{~mm}$ long, 1.1 length of adjacent fertile lemma, coriaceous, without keels, 3-5 -veined. Upper glume lateral veins ribbed. Upper glume apex acuminate.

Florets. Fertile lemma oblong, 5.5-8.5 mm long, membranous, without keel, 3 -veined, 0-3 -veined. Lemma apex acute. Palea 1 length of lemma. Palea surface scaberulous.

Flower and Fruit. Anthers 3, 3.2-4 mm long. Caryopsis with adherent pericarp, ellipsoid, 3 mm long. Hilum elliptic. Endosperm liquid.

Distribution (TDWG). Continent. Europe, Temperate Asia.
Region. Northern Europe (*), Southwestern Europe, Southeastern Europe.
Country /Province /State. : GB Aliens (Ryves et al). : France, Portugal, Spain. : Greece, Italy. Western Asia. Turkey.

Derivation (Clifford \& Bostock 2007): L. covered with short, bristle-like hairs. One or more organs covered with bristle-like hairs.

Classification. Subfamily Pooideae. Tribe: Poeae.
Habit, Vegetative Morphology. Annual, caespitose. Culms geniculately ascending, $20-40 \mathrm{~cm}$ long. Ligule an eciliate membrane, $0.3-1 \mathrm{~mm}$ long. Leaf-blades $1-6 \mathrm{~cm}$ long, $1-2.5 \mathrm{~mm}$ wide. Leaf-blade surface scaberulous, rough adaxially. Leaf-blade margins scaberulous.

Inflorescence. Inflorescence composed of racemes. Racemes 1, single, straight, smoothly terete, bilateral, $2-20 \mathrm{~cm}$ long. Rhachis fragile at the nodes, subcylindrical and excavated, $1-1.5 \mathrm{~mm}$ wide. Spikelet packing broadside to rhachis, lax. Rhachis internodes oblong, 4-7 mm long. Rhachis internode tip transverse. Spikelets sunken, solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets oblong, laterally compressed, 3-7 mm long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes collateral, similar, exceeding apex of florets, firmer than fertile lemma. Lower glume lanceolate, $3-7 \mathrm{~mm}$ long, 1 length of upper glume, coriaceous, without keels, 3-5 -veined. Lower glume lateral veins ribbed. Lower glume apex acute. Upper glume lanceolate, 3-7 mm long, 1.1 length of adjacent fertile lemma, coriaceous, without keels, 3-5 -veined. Upper glume lateral veins ribbed. Upper glume apex acute.

Florets. Fertile lemma ovate, $2.5-5.5 \mathrm{~mm}$ long, membranous, without keel, 3 -veined, $0-3$-veined. Lemma lateral veins less than two thirds length of lemma. Lemma apex acute. Palea 1 length of lemma.

Flower and Fruit. Anthers 3, $2-4 \mathrm{~mm}$ long. Caryopsis with adherent pericarp, ellipsoid. Hilum elliptic. Endosperm liquid.
$2 n=28$ ( 2 refs TROPICOS).
Distribution (TDWG). Continent. Europe, Africa, Australasia (*), North America, South America.
Region. Northern Europe, Middle Europe, Southwestern Europe, Southeastern Europe.
Country /Province /State. : Denmark, Great Britain, Ireland, Sweden. : Belgium, Germany, Netherlands. : France, Portugal, Spain. : Italy, Yugoslavia. Northern Africa. Libya. Australia (*), New Zealand (*). New South Wales (*), Victoria (*), Tasmania (*). New Zealand North I. Southwestern USA. California. Southern South America. Chile Central, Chile South.

Western Plains. Biobio, La Araucania. Los Lagos.
Paratheria glaberrima C.E.Hubb. Kew Bull. 1949, 365 (1949).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Sierra Leone. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: F.C. Deighton 4337, 19 Jul 1946, Sierra Leone: Kambia District (K; IT: US-1984444).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. most free of hairs. Plant glabrous.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.

Habit, Vegetative Morphology. Perennial. Culms prostrate, $15-60 \mathrm{~cm}$ long. Culm-nodes glabrous. Leaf-sheaths keeled. Ligule a ciliolate membrane. Leaf-blades $2-3 \mathrm{~mm}$ wide. Leaf-blade surface glabrous.

Inflorescence. Inflorescence composed of racemes, embraced at base by subtending leaf. Racemes 815 , borne along a central axis, in a multilateral false spike, appressed, $2.5-4 \mathrm{~cm}$ long, bearing 1 spikelet. Central inflorescence axis $7-15 \mathrm{~cm}$ long. Rhachis deciduous from axis, smooth on margins, terminating in a barren extension, extension bristle-like. Spikelet packing abaxial. Raceme-bases linear, $10-15 \mathrm{~mm}$ long, glabrous, shed with the raceme, pungent. Spikelets appressed, solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate, dorsally compressed, acuminate, 20-27 mm long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes similar, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, 2-3 mm long, 1 length of upper glume, 0.2 length of spikelet, hyaline, without keels, 0 -veined. Lower glume lateral veins absent. Lower glume apex acute. Upper glume ovate, $2-3 \mathrm{~mm}$ long, 0.2 length of adjacent fertile lemma, hyaline, without keels, 0 -veined. Upper glume primary vein absent. Upper glume lateral veins absent. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret lanceolate, 1 length of fertile lemma, membranous, 7-11 -veined, acuminate. Fertile lemma lanceolate, 1012 mm long, cartilaginous, much thinner on margins, 7 -veined, more than 3-veined. Lemma margins flat. Lemma apex acuminate. Palea cartilaginous.

Flower and Fruit. Cleistogenes present, in upper sheaths.
Distribution (TDWG). Continent. Africa.
Country /Province/State. West Tropical Africa. Sierre Leone.

## Paratheria prostrata Griseb. Cat. Pl. Cub. 236 (1866).

TYPE from Cuba. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Wright 3906, 1865, Cuba (GOET; IT: NY-71047, NY-71048).

Illustrations (Books): H.Jacques-Felix, Les Graminees d'Afrique tropicale (1962) (258, Fig. 189), G.V.Pope et al., Flora Zambesiaca 10 (3(1989):189, T. 49), J.Bosser, Graminees des Paturage et des Cultures a Madagascar (1969) (279, Fig 102), A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (354, Fig. 325), S.A.Renvoize, Gramineas de Bolivia (1998) (542, Fig 123), S.A.Renvoize, The Grasses of Bahia, 1984, J.A.Steyermark et al, Flora of the Venezuelan Guayana Vol. 8 (2004) (209, Fig. 164), W.Burger, Flora Costaricensis 15, Gramineae: Fieldiana Botany New Series 4 (1980) (394, Fig 143a), E.Judziewicz, Flora of the Guianas, 187. Poaceae (1990) (439, Fig 78), R.Pilger, Die Naturlichen Pflanzenfamilien 14e (1940) (76, Fig. 45).

Derivation (Clifford \& Bostock 2007): L. prosterno, throw to the ground. Culms creeping or wiry so as to fall on the ground.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Perennial. Culms prostrate, $15-60 \mathrm{~cm}$ long. Culm-nodes bearded. Leaf-sheaths keeled. Ligule a ciliolate membrane. Leaf-blades $2-7 \mathrm{~cm}$ long, $2-4 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pubescent.

Inflorescence. Inflorescence composed of racemes, embraced at base by subtending leaf. Racemes 815 , borne along a central axis, in a multilateral false spike, appressed, (1.7-)3-5 cm long, bearing 1 spikelet. Central inflorescence axis $7-15 \mathrm{~cm}$ long. Rhachis deciduous from axis, scabrous on margins, terminating in a barren extension, extension bristle-like. Spikelet packing abaxial. Raceme-bases linear, 2-8 mm long, pilose (above), shed with the raceme, pungent. Spikelets appressed, solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate, dorsally compressed, acuminate, (8-)1520 mm long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes similar, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, 1-2 mm long, 1 length of upper glume, 0.1 length of spikelet, hyaline, without keels, 0 -veined. Lower glume
lateral veins absent. Lower glume apex obtuse. Upper glume ovate, 1-2 mm long, 0.1 length of adjacent fertile lemma, hyaline, without keels, 0 -veined. Upper glume primary vein absent. Upper glume lateral veins absent. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret lanceolate, 1 length of fertile lemma, membranous, 7-11 -veined, acuminate. Fertile lemma lanceolate, (6-)10-12 mm long, cartilaginous, much thinner on margins, 7 -veined, more than 3-veined. Lemma margins flat. Lemma apex acuminate. Palea cartilaginous.

Flower and Fruit. Cleistogenes present, in upper sheaths.
$n=18$ ( 1 ref TROPICOS).

TYPE from Panama. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT:T. B. Croat 49139, 5 Dec 1979, Panama: Panam? El Llano-Cart?road, 4 mi beyond the (Pan-American) Highway, 500 m , in shade of forest, spikes green, the stamens yellow (MO-2806084).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. silvery. Glumes or lemmas silvery.
Classification. Subfamily Bambusoideae. Tribe: Olyreae.
Habit, Vegetative Morphology. Perennial. Butt sheaths absent. Culms geniculately ascending, 20-40 cm long. Culm-internodes abbreviated and closely packed at the base, terete, thin-walled. Culm-nodes with distinct supra-nodal ridge, pallid or purple, glabrous. Culm-sheaths present. Leaves cauline, 7-10 per branch. Leaf-sheaths keeled, glabrous on surface or pubescent. Leaf-sheath oral hairs setose, spreading, 6-8 mm long. Ligule an eciliate membrane, $0.6-0.7 \mathrm{~mm}$ long, scarious, truncate. Leaf-blade base cuneate, with a brief petiole-like connection to sheath, petiole $0.15-0.25 \mathrm{~cm}$ long, petiole glabrous. Leaf-blades linear or lanceolate, $6-12 \mathrm{~cm}$ long, $8-16 \mathrm{~mm}$ wide, mid-green or glaucous, discolorous with last colour beneath. Leaf-blade surface glabrous. Leaf-blade apex acuminate or attenuate. Monoecious, with male and female spikelets in the same inflorescence.

Inflorescence. Synflorescence on a separate leafless culm.
Inflorescence composed of racemes. Racemes 1, single, erect, multilateral, 3-4.4 cm long, 10 mm wide, bearing 7 fertile spikelets on each. Rhachis fragile at the nodes. Rhachis internodes linear. Sexes mixed (in a cluster at each node). Spikelets appressed, subtended by an involucre. Fertile spikelets sessile, 1 in the cluster. Male spikelets pedicelled, 5 in a cluster. Involucre composed of imperfect spikelets, with pedicels forming a cup, oblong. Pedicels present, fused to each other, united along margins, cuneate, flattened, 3.2-4 mm long, 0.66 length of fertile spikelet, ciliate.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets ovate, laterally compressed, compressed slightly, $5.3-6.1 \mathrm{~mm}$ long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes similar, exceeding apex of florets, thinner than fertile lemma. Lower glume ovate, 1 length of upper glume, chartaceous, 1-keeled. Lower glume primary vein scaberulous. Lower glume apex acute. Upper glume ovate, 1.1 length of adjacent fertile lemma, chartaceous, 1-keeled. Upper glume primary vein scaberulous. Upper glume apex acute.

Florets. Fertile florets female. Fertile lemma ovate, $4.5-5.2 \mathrm{~mm}$ long, coriaceous, without keel. Lemma apex acute. Palea 1 length of lemma, coriaceous, without keels.

Flower and Fruit. Lodicules 3, obovate, 1.5 mm long, membranous. Anthers 9-15, 2.6-2.8 mm long, yellow. Filaments united in a tube. Stigmas 2.

Male spikelets distinct from female, 1 flowered, ovate, $7.2-8.3 \mathrm{~mm}$ long. Male spikelet glumes 2 . Male spikelet lemma $3.5-4 \mathrm{~mm}$ long, $2-3$-veined.

Distribution (TDWG). Continent. South America.
Country /Province /State. Mesoamerica. Panama.

TYPE from Bolivia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: $O$. Buchtien 458, 17 Dec 1926, Bolivia: La Paz (US; IT: NY).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. bis, twice; color, color. Two-colored, usually with respect to spikelets or florets.

Classification. Subfamily Bambusoideae. Tribe: Olyreae.

Habit, Vegetative Morphology. Perennial. Culms erect, 40-80 cm long. Leaves cauline. Leaf-sheath oral hairs scanty or lacking. Ligule an eciliate membrane, $2-3 \mathrm{~mm}$ long. Leaf-blade base with a brief petiole-like connection to sheath, petiole $0.2-0.3 \mathrm{~cm}$ long, petiole pubescent. Leaf-blades oblong or ovate, $12-22 \mathrm{~cm}$ long, 25-50 mm wide, mid-green or glaucous, discolorous with last colour beneath. Leaf-blade surface scabrous, rough abaxially, glabrous. Leaf-blade apex acuminate. Monoecious, with male and female spikelets in the same inflorescence.

Inflorescence. Synflorescence on a separate leafless culm.
Inflorescence composed of racemes. Racemes 1, single, erect, multilateral, 7-9 cm long, $8-10 \mathrm{~mm}$ wide. Rhachis fragile at the nodes, terminating in a spikelet. Spikelet packing lax. Rhachis internodes linear. Sexes mixed (in a cluster at each node). Spikelets subtended by an involucre. Fertile spikelets sessile, 1 in the cluster. Male spikelets pedicelled, 5 in a cluster. Involucre composed of imperfect spikelets, with pedicels forming a cup, oblong. Pedicels present, fused to each other, united along margins, oblong, flattened, $2-3 \mathrm{~mm}$ long, puberulous or villous (at base), tip rectangular.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets ovate, laterally compressed, compressed slightly, 6 mm long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 6 mm long, 1 length of upper glume, chartaceous, 1 -keeled. Lower glume margins ciliate. Lower glume apex obtuse. Upper glume ovate, 6 mm long, 1 length of adjacent fertile lemma, chartaceous, 1-keeled. Upper glume margins ciliate. Upper glume apex obtuse.

Florets. Fertile florets female. Fertile lemma ovate, 6 mm long, coriaceous, without keel, 3 -veined, $0-$ 3 -veined. Lemma apex acute. Palea coriaceous, without keels.

Flower and Fruit. Lodicules 3. Anthers 25. Filaments united in a tube. Stigmas 2.
Male spikelets distinct from female, 1 flowered, deciduous with the fertile, ovate, $3.5-4.5 \mathrm{~mm}$ long, glabrous or hairy. Male spikelet glumes 2, triangular, 2-2.5 mm long. Male spikelet lemma $3.5-4.5 \mathrm{~mm}$ long, 3 -veined, with cross-veins.

Distribution (TDWG). Continent. South America.

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Brazil, San Jose to Una: Carvalho et al. 4382 (CEPEC holo, ISC).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): In honor of Andre Mauricio de Vieira de Carvalho (1951-2002) Brazilian botanist.

Classification. Subfamily Bambusoideae. Tribe: Olyreae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, $40-75 \mathrm{~cm}$ long, $2-4 \mathrm{~mm}$ diam. Culm-internodes distally glabrous or pilose. Culm-nodes glabrous. Lateral branches lacking. Leaves cauline, 3-6 per branch. Leaf-sheaths glabrous on surface, outer margin glabrous or hairy. Leaf-sheath oral hairs scanty or lacking. Ligule an eciliate membrane, $0.3-0.5 \mathrm{~mm}$ long. Leaf-blade base symmetrical, with a brief petiole-like connection to sheath. Leaf-blades lanceolate or ovate, $6-20 \mathrm{~cm}$ long, 21-34 mm wide. Leaf-blade surface glabrous. Leaf-blade margins scaberulous. Leaf-blade apex acuminate. Monoecious, with male and female spikelets in the same inflorescence.

Inflorescence. Synflorescence on the same culm as leaves.
Inflorescence composed of racemes, exserted. Racemes 1, single, erect, linear, multilateral, $6.5-8 \mathrm{~cm}$ long, $5-8 \mathrm{~mm}$ wide, bearing few fertile spikelets, bearing 6-8 fertile spikelets on each. Rhachis fragile at the nodes, subterete, scaberulous on margins. Rhachis internodes linear, $9-9.5 \mathrm{~mm}$ long. Rhachis internode tip cupuliform. Sexes mixed (in a cluster at each node). Spikelets appressed, subtended by an involucre. Fertile spikelets sessile, 1 in the cluster. Male spikelets pedicelled, 5 in a cluster. Involucre composed of imperfect spikelets, with pedicels forming a long tube, oblong, $12.5-14 \mathrm{~mm}$ long, base obconical. Pedicels present, fused to each other, united along margins, oblong, flattened, $7-8.2 \mathrm{~mm}$ long, glabrous or ciliate, tip rectangular.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets oblong, dorsally compressed, compressed slightly, 10-11.2 mm long, 2.6-3 mm wide, falling entire, deciduous with accessory branch structures.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume oblong, 910 mm long, 1 length of upper glume, chartaceous, without keels. Lower glume apex acuminate. Upper glume oblong, $9-10 \mathrm{~mm}$ long, chartaceous, without keels. Upper glume apex acuminate.

Florets. Fertile florets female. Fertile lemma lanceolate or oblong, $9.5-11 \mathrm{~mm}$ long, $2-3 \mathrm{~mm}$ wide, coriaceous, light brown or dark brown, without keel. Lemma apex acute. Palea 1 length of lemma, coriaceous, 2 -veined, without keels.

Flower and Fruit. Anthers 2. Hilum linear.
Male spikelets distinct from female, 1 flowered, deciduous with the fertile, oblong or ovate, 2-2.5 mm long, hairy. Male spikelet glumes 2, oblong or triangular, 2-2.5 mm long. Male spikelet lemma 3 -veined.

Distribution (TDWG). Continent. South America. Country /Province /State. Brazil. Brazil Northeast. Bahia.

TYPE from Ecuador. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: H. Schultze-Rhonhof 2275, Ecuador (B (fragm., US-2877972)).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From Ecuador.
Classification. Subfamily Bambusoideae. Tribe: Olyreae.
Habit, Vegetative Morphology. Perennial. Culms erect, $20-40 \mathrm{~cm}$ long. Culm-internodes 4-9 cm long. Lateral branches lacking. Leaves cauline, 5 per branch. Leaf-sheath oral hairs setose, $10-20 \mathrm{~mm}$ long. Ligule an eciliate membrane. Leaf-blade base with a brief petiole-like connection to sheath. Leaf-blades oblong or ovate, $6-11 \mathrm{~cm}$ long, $20-35 \mathrm{~mm}$ wide. Leaf-blade margins scabrous. Leaf-blade apex acuminate. Monoecious, with male and female spikelets in the same inflorescence.

Inflorescence. Synflorescence on a separate leafless culm.
Inflorescence composed of racemes. Racemes 1, single, erect, oblong, multilateral, 9.5 cm long. Rhachis fragile at the nodes, flattened. Spikelet packing crowded. Rhachis internodes 5.5 mm long. Sexes mixed (in a cluster at each node). Spikelets appressed, subtended by an involucre. Fertile spikelets sessile, 1 in the cluster. Male spikelets pedicelled, 5 in a cluster. Involucre composed of imperfect spikelets, with pedicels forming a cup, oblong. Pedicels present, fused to each other, united along margins, cuneate, flattened, 3 mm long, puberulous, hairy at base, hairy on surface and margins, tip rectangular.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets lanceolate, dorsally compressed, 5 mm long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate, chartaceous, without keels, 1 -veined. Lower glume apex acute. Upper glume ovate, chartaceous, 1 -veined. Upper glume lateral veins absent. Upper glume apex acute.

Florets. Fertile florets female. Fertile lemma ovate, 4 mm long, coriaceous, without keel, 3 -veined, $0-$ 3 -veined. Lemma apex acute. Palea 1 length of lemma, coriaceous, 4 -veined, without keels.

Flower and Fruit. Lodicules 3. Anthers 20. Stigmas 2.
Male spikelets distinct from female, 1 flowered, deciduous with the fertile, elliptic, 5.5 mm long. Male spikelet glumes 2, ovate, 3-3.5 mm long. Male spikelet lemma 6-7 mm long, 7 -veined.

Distribution (TDWG). Continent. South America.
Country /Province /State. Western South America, Brazil. Ecuador. Brazil North.
Amazonas.

Pariana gleasonii Hitchcock. Contrib. U. S. Nat. Herb. xxii. 513 (1922).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Guyana. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: H.A. Gleason 209, 25-27 Jun 1921, Guyana: Potaro River, Potaro Landing, in dense upland bush (US1064516).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): in honor of Henry Allan Gleason (1882-) American botanist who collected in British Guiana, now Guyana.

Classification. Subfamily Bambusoideae. Tribe: Olyreae.
Habit, Vegetative Morphology. Perennial, caespitose. Stolons present. Culms erect, 30-40 cm long. Lateral branches lacking. Leaves cauline, $1-3$ per branch. Leaf-sheath oral hairs lacking or ciliate. Leafsheath auricles absent or erect. Ligule an eciliate membrane, 1 mm long. Leaf-blade base with a brief petiole-like connection to sheath, petiole $0.3-0.5 \mathrm{~cm}$ long, petiole glabrous or pubescent. Leaf-blades lanceolate, $10-30 \mathrm{~cm}$ long, $25-80 \mathrm{~mm}$ wide, glaucous. Leaf-blade surface smooth, glabrous. Leaf-blade apex acuminate. Monoecious, with male and female spikelets in the same inflorescence.

Inflorescence. Synflorescence on a separate leafless culm.
Inflorescence composed of racemes. Racemes 1, single, erect, oblong, multilateral, 3-7 cm long. Rhachis fragile at the nodes, subterete. Spikelet packing crowded. Rhachis internodes linear. Rhachis internode tip cupuliform. Sexes mixed (in a cluster at each node). Spikelets appressed, subtended by an involucre. Fertile spikelets sessile, 1 in the cluster. Male spikelets pedicelled, 4-5 in a cluster. Involucre composed of imperfect spikelets, with pedicels forming a cup, oblong, $8-10 \mathrm{~mm}$ long, base obconical. Pedicels present, fused to each other, united along margins, cuneate, flattened, $4-5 \mathrm{~mm}$ long, pubescent, hairy on margins or one margin, tip rectangular.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets lanceolate, dorsally compressed, compressed slightly, $5.5-6 \mathrm{~mm}$ long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate, $5-7 \mathrm{~mm}$ long, 1 length of upper glume, chartaceous, without keels, $1-2$-veined. Lower glume lateral veins absent or obscure. Lower glume surface glabrous or puberulous. Lower glume apex acute.

Upper glume lanceolate, $5.5-6 \mathrm{~mm}$ long, chartaceous, without keels, $0-1$-veined. Upper glume primary vein absent or obscure. Upper glume lateral veins absent. Upper glume surface glabrous or puberulous. Upper glume apex acuminate.

Florets. Fertile florets female. Fertile lemma ovate, 5 mm long, coriaceous, without keel. Lemma apex acute or apiculate. Palea 1 length of lemma, coriaceous, without keels.

Flower and Fruit. Lodicules 3, 0.5-3 mm long. Anthers 6-8. Stigmas 2, terminally exserted. Caryopsis 4 mm long.

Male spikelets distinct from female, 1 flowered, deciduous with the fertile, ovate, $4.5-5.5 \mathrm{~mm}$ long, glabrous. Male spikelet glumes 2, 1-4 mm long. Male spikelet lemma $4.5-5.5 \mathrm{~mm}$ long, 1 -veined, without cross-veins or with cross-veins.

Distribution (TDWG). Continent. South America.
Country /Province /State. Northern South America, Brazil. Guyana.

## Pariana gracilis Doell. Mart. Fl. Bras. ii. II. 337. (1877).

Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: LT: Spruce 1787, Brazil: habitat prope Manaos prov. de Atto Amazonas (K). LT designated by Tutin, J. Linn. Bot., Bot. 50(334): 359 (1936). ST: d'Orbigny 147, Bolivia: Majos (BR; IST: BR, P, US-2877970).

Illustrations (Journals): Ruizia (13:55, Fig. 6d (1993)).
Derivation (Clifford \& Bostock 2007): L. slender. Culms or inflorescences slender.
Classification. Subfamily Bambusoideae. Tribe: Olyreae.
Habit, Vegetative Morphology. Perennial. Culms geniculately ascending, slender, 30-40 cm long. Leaves cauline. Leaf-sheath oral hairs lacking. Leaf-sheath auricles erect. Ligule an eciliate membrane, 22.5 mm long. Leaf-blade base with a brief petiole-like connection to sheath. Leaf-blades lanceolate or oblong, $10-15 \mathrm{~cm}$ long, $20-25 \mathrm{~mm}$ wide. Leaf-blade surface glabrous. Leaf-blade apex acuminate. Monoecious, with male and female spikelets in the same inflorescence.

Inflorescence. Synflorescence on a separate leafless culm.
Inflorescence composed of racemes. Racemes 1 , single, erect, multilateral, 8 cm long. Rhachis fragile at the nodes, terminating in a sterile spikelet. Rhachis internodes linear. Sexes mixed (in a cluster at each node). Spikelets subtended by an involucre. Fertile spikelets sessile, 1 in the cluster. Male spikelets pedicelled, 5 in a cluster. Involucre composed of imperfect spikelets, with pedicels forming a cup, oblong. Pedicels present, fused to each other, united along margins, oblong, flattened, $2.5-3 \mathrm{~mm}$ long, puberulous, tip rectangular.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets ovate, laterally compressed, compressed slightly, 5 mm long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes similar, exceeding apex of florets, thinner than fertile lemma. Lower glume ovate, 5 mm long, 1 length of upper glume, chartaceous, 1 -keeled. Lower glume apex acute. Upper glume ovate, 5 mm long, 1.2 length of adjacent fertile lemma, chartaceous, 1-keeled. Upper glume apex acute.

Florets. Fertile florets female. Fertile lemma ovate, 4 mm long, coriaceous, without keel, 3 -veined, $0-$ 3 -veined. Lemma apex acute. Palea coriaceous, without keels.

Flower and Fruit. Lodicules 3. Stigmas 2.
Male spikelets distinct from female, 1 flowered, deciduous with the fertile, ovate, $4-4.5 \mathrm{~mm}$ long. Male spikelet glumes 2, lanceolate, $2-3 \mathrm{~mm}$ long. Male spikelet lemma $4-4.5 \mathrm{~mm}$ long, without cross-veins or with cross-veins.

Distribution (TDWG). Continent. South America.

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. beardless. Glumes and/or lemmas glabrous.
Classification. Subfamily Bambusoideae. Tribe: Olyreae.
Habit, Vegetative Morphology. Perennial. Culms erect, 100-150 cm long. Leaves cauline. Leafsheaths ribbed, glabrous on surface or pubescent. Leaf-sheath oral hairs ciliate. Ligule an eciliate membrane, 2 mm long. Leaf-blade base broadly rounded, asymmetrical, with a brief petiole-like connection to sheath. Leaf-blades lanceolate, $20-27 \mathrm{~cm}$ long, $45-60 \mathrm{~mm}$ wide. Leaf-blade surface scabrous, rough abaxially. Leaf-blade apex acuminate. Monoecious, with male and female spikelets in the same inflorescence.

Inflorescence. Synflorescence on the same culm as leaves.
Inflorescence composed of racemes. Racemes 1, single, erect, multilateral, 20 cm long, $10-15 \mathrm{~mm}$ wide. Rhachis fragile at the nodes. Spikelet packing crowded. Rhachis internodes linear. Sexes mixed (in a cluster at each node). Spikelets subtended by an involucre. Fertile spikelets sessile, 1 in the cluster. Male spikelets pedicelled, 5 in a cluster. Involucre composed of imperfect spikelets, with pedicels forming a cup, oblong. Pedicels present, fused to each other, united along margins, oblong, flattened, 3 mm long, 1 length of internode, tip rectangular.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets ovate, laterally compressed, compressed slightly, 7-8 mm long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes similar, exceeding apex of florets, thinner than fertile lemma. Lower glume ovate, 78 mm long, 1 length of upper glume, chartaceous, 1 -keeled, 3 -veined. Lower glume surface puberulous. Lower glume apex acuminate. Upper glume ovate, $7-8 \mathrm{~mm}$ long, $1.2-1.3$ length of adjacent fertile lemma, chartaceous, 1 -keeled, 3 -veined. Upper glume surface puberulous. Upper glume apex acuminate.

Florets. Fertile florets female. Fertile lemma ovate, 6 mm long, coriaceous, without keel, 3 -veined, $0-$ 3 -veined. Lemma apex acute, pubescent. Palea coriaceous, 0 -veined, without keels.

Flower and Fruit. Lodicules 3, cuneate. Anthers 20. Stigmas 2. Caryopsis trigonous, 3-4.5 mm long.
Male spikelets distinct from female, 1 flowered, deciduous with the fertile, ovate, $7-8 \mathrm{~mm}$ long, hairy. Male spikelet glumes 2, oblong, 3-4 mm long. Male spikelet lemma $7-8 \mathrm{~mm}$ long, 3 -veined.

Pariana intermedia Doell. Mart. Fl. Bras. ii. II. 337. (1877).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: R. Spruce 876, Brazil: Par?(M; IT: US-2877966).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. intermediate. Having affinities with but distinct from other species.

Classification. Subfamily Bambusoideae. Tribe: Olyreae.
Habit, Vegetative Morphology. Perennial. Culms erect, 30-40 cm long, 2 mm diam. Leaves cauline. Leaf-sheaths puberulous. Leaf-sheath oral hairs setose. Ligule an eciliate membrane, 2-3 mm long, truncate. Leaf-blade base with a brief petiole-like connection to sheath, petiole $0.2-0.3 \mathrm{~cm}$ long, petiole pubescent. Leaf-blades lanceolate, $6-11 \mathrm{~cm}$ long, $20-25 \mathrm{~mm}$ wide, mid-green or glaucous, discolorous with last colour beneath. Leaf-blade surface scabrous, rough adaxially. Leaf-blade apex acuminate. Monoecious, with male and female spikelets in the same inflorescence.

Inflorescence. Synflorescence on the same culm as leaves.
Inflorescence composed of racemes. Racemes 1, single, erect, multilateral, 8-10 cm long, 7-9 mm wide. Rhachis fragile at the nodes, terminating in a sterile spikelet. Spikelet packing lax. Rhachis internodes linear. Sexes mixed (in a cluster at each node). Spikelets subtended by an involucre. Fertile spikelets sessile, 1 in the cluster. Male spikelets pedicelled, 5 in a cluster. Involucre composed of imperfect spikelets, with pedicels forming a cup, oblong. Pedicels present, fused to each other, united along margins, oblong, flattened, 3 mm long, pubescent, tip rectangular.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets ovate, laterally compressed, compressed slightly, 7 mm long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate or oblong, 7 mm long, 1 length of upper glume, chartaceous, 1 -keeled, 1 -veined. Lower glume lateral veins absent. Lower glume surface puberulous, hairy at apex. Lower glume apex acute. Upper glume ovate, 7 mm long, 1.2 length of adjacent fertile lemma, chartaceous, 1 -keeled, 1 -veined. Upper glume lateral veins absent. Upper glume surface puberulous, hairy at apex. Upper glume apex acute.

Florets. Fertile florets female. Fertile lemma ovate, 6 mm long, coriaceous, without keel, 3 -veined, 03 -veined. Lemma apex acute. Palea coriaceous, without keels.

Flower and Fruit. Lodicules 3, 2 mm long. Anthers 10. Filaments united in groups. Stigmas 2.
Male spikelets distinct from female, 1 flowered, deciduous with the fertile, ovate, $3.5-5 \mathrm{~mm}$ long, hairy. Male spikelet glumes 2, linear, $1-2.5 \mathrm{~mm}$ long. Male spikelet lemma $3.5-5 \mathrm{~mm}$ long.

Distribution (TDWG). Continent. South America.

TYPE from Gayana. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: British Guiana: Karau Creek, Mazaruni Station, in Mora forest, Tutin 39 (HT: BM).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. longus, long; flos, flower. Having long spikelets.
Classification. Subfamily Bambusoideae. Tribe: Olyreae.
Habit, Vegetative Morphology. Perennial, caespitose. Stolons present. Culms erect, 40-60 cm long. Lateral branches lacking. Leaves cauline. Leaf-sheaths puberulous. Leaf-sheath oral hairs scanty or setose. Leaf-sheath auricles erect. Ligule an eciliate membrane. Leaf-blade base broadly rounded, with a brief petiole-like connection to sheath, petiole 0.3 cm long, petiole pubescent. Leaf-blades lanceolate or ovate, $10-15 \mathrm{~cm}$ long, $30-40 \mathrm{~mm}$ wide, glaucous. Leaf-blade apex acute. Monoecious, with male and female spikelets in the same inflorescence.

Inflorescence. Synflorescence on a separate leafless culm.
Inflorescence composed of racemes, subtended by a spatheole. Racemes 1, single, erect, oblong, multilateral, 10 cm long. Rhachis fragile at the nodes, subterete. Spikelet packing crowded. Rhachis internodes linear. Rhachis internode tip cupuliform. Sexes mixed (in a cluster at each node). Spikelets appressed, subtended by an involucre. Fertile spikelets sessile, 1 in the cluster. Male spikelets pedicelled, 5 in a cluster. Involucre composed of imperfect spikelets, with pedicels forming a cup, oblong, 11-12 mm
long, base obconical. Pedicels present, fused to each other, united along margins, cuneate, flattened, 2 mm long, ciliate, hairy on margins, tip rectangular.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets lanceolate, dorsally compressed, compressed slightly, 12-13 mm long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate, $12-13 \mathrm{~mm}$ long, 1 length of upper glume, chartaceous, without keels, 5 -veined. Lower glume lateral veins obscure, without connecting veins. Lower glume surface puberulous. Lower glume apex acute. Upper glume lanceolate, $12-13 \mathrm{~mm}$ long, chartaceous, 1 -keeled, 5 -veined. Upper glume lateral veins obscure. Upper glume surface puberulous. Upper glume apex acute.

Florets. Fertile florets female. Fertile lemma ovate, 8 mm long, coriaceous, without keel. Lemma lateral veins obscure. Lemma apex acute. Palea 1 length of lemma, coriaceous, without keels.

Flower and Fruit. Lodicules 3, 1 mm long, ciliate. Anthers 18. Stigmas 2, terminally exserted.
Male spikelets distinct from female, 1 flowered, deciduous with the fertile, ovate, $9-10 \mathrm{~mm}$ long, hairy (ciliate). Male spikelet glumes 2, $8-9 \mathrm{~mm}$ long, $2-3$-veined. Male spikelet lemma $9-10 \mathrm{~mm}$ long, 3 veined.

Distribution (TDWG). Continent. South America.
Country /Province/State. Northern South America. Guyana.

Pariana lunata Nees. Agrost. Bras. 295. (1829).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Brasilia: habitat in sylvis juxta flumen Amazonum provinciae Paraensis, Febr, Martio,

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. luna, moon; -ata, possessing. Auricles crescent-shaped.
Classification. Subfamily Bambusoideae. Tribe: Olyreae.
Habit, Vegetative Morphology. Perennial. Culms erect, 100-150 cm long. Leaves cauline. Leafsheaths ribbed, glabrous on surface or pubescent. Leaf-sheath oral hairs ciliate. Ligule an eciliate membrane, 2 mm long. Leaf-blade base broadly rounded, asymmetrical, with a brief petiole-like connection to sheath. Leaf-blades lanceolate, $20-27 \mathrm{~cm}$ long, $45-60 \mathrm{~mm}$ wide. Leaf-blade surface scabrous, rough abaxially. Leaf-blade apex acuminate. Monoecious, with male and female spikelets in the same inflorescence.

Inflorescence. Synflorescence on the same culm as leaves.
Inflorescence composed of racemes. Racemes 1, single, erect, multilateral, 20 cm long, $10-15 \mathrm{~mm}$ wide. Rhachis fragile at the nodes. Spikelet packing crowded. Rhachis internodes linear. Sexes mixed (in a cluster at each node). Spikelets subtended by an involucre. Fertile spikelets sessile, 1 in the cluster. Male spikelets pedicelled, 5 in a cluster. Involucre composed of imperfect spikelets, with pedicels forming a cup, oblong. Pedicels present, fused to each other, united along margins, oblong, flattened, 3 mm long, 1 length of internode, tip rectangular.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets ovate, laterally compressed, compressed slightly, 7-8 mm long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes similar, exceeding apex of florets, thinner than fertile lemma. Lower glume ovate, 78 mm long, 1 length of upper glume, chartaceous, 1 -keeled, 3 -veined. Lower glume surface puberulous. Lower glume apex acuminate. Upper glume ovate, $7-8 \mathrm{~mm}$ long, $1.2-1.3$ length of adjacent fertile lemma, chartaceous, 1 -keeled, 3 -veined. Upper glume surface puberulous. Upper glume apex acuminate.

Florets. Fertile florets female. Fertile lemma ovate, 6 mm long, coriaceous, without keel, 3 -veined, $0-$ 3 -veined. Lemma apex acute, pubescent. Palea coriaceous, 0 -veined, without keels.

Flower and Fruit. Lodicules 3, cuneate. Anthers 20. Stigmas 2. Caryopsis trigonous, 3-4.5 mm long.
Male spikelets distinct from female, 1 flowered, deciduous with the fertile, ovate, $7-8 \mathrm{~mm}$ long, hairy. Male spikelet glumes 2, oblong, 3-4 mm long. Male spikelet lemma $7-8 \mathrm{~mm}$ long, 3 -veined.

Distribution (TDWG). Continent. South America.
Country /Province /State. Northern South America, Brazil. French Guiana. Brazil North.
Para, Amapa. Pará.
Pariana maynensis Huber. Bol. Mus. Para. iv. 526 (1906).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Peru. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: NT: J. Huber 4296, Peru: Loreto: Cerro de Canchahuaya (MG-1440). NT designated by Hollowell, Fl. Mesoamer. 6: 217 (1994).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From Maynas, Peru.
Classification. Subfamily Bambusoideae. Tribe: Olyreae.
Habit, Vegetative Morphology. Perennial. Culms erect, $100-150 \mathrm{~cm}$ long, 5 mm diam. Culminternodes distally pubescent. Culm-nodes swollen. Leaves cauline. Leaf-sheath oral hairs lacking. Ligule an eciliate membrane, 5 mm long. Leaf-blade base with a brief petiole-like connection to sheath, petiole $0.7-0.8 \mathrm{~cm}$ long. Leaf-blades elliptic, $30-35 \mathrm{~cm}$ long, $60-90 \mathrm{~mm}$ wide, mid-green or glaucous, discolorous with last colour beneath. Leaf-blade margins scabrous. Leaf-blade apex acuminate. Monoecious, with male and female spikelets in the same inflorescence.

Inflorescence. Synflorescence on a separate leafless culm.
Inflorescence composed of racemes. Racemes 1, single, erect, multilateral, 8-10 cm long. Rhachis fragile at the nodes. Rhachis internodes linear. Sexes mixed (in a cluster at each node). Spikelets subtended by an involucre. Fertile spikelets sessile, 1 in the cluster. Male spikelets pedicelled, 5 in a cluster. Involucre composed of imperfect spikelets, with pedicels forming a cup, oblong. Pedicels present, fused to each other, united along margins, oblong, flattened, $3-4 \mathrm{~mm}$ long, ciliate, hairy at base, tip rectangular.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets ovate, laterally compressed, compressed slightly, 7 mm long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes similar, exceeding apex of florets, thinner than fertile lemma. Lower glume ovate, 7 mm long, 1 length of upper glume, chartaceous, 1 -keeled, 1 -veined. Lower glume lateral veins absent. Lower glume apex acuminate. Upper glume ovate, 7 mm long, 1.2 length of adjacent fertile lemma, chartaceous, 1 -keeled, 1 -veined. Upper glume lateral veins absent. Upper glume apex acuminate.

Florets. Fertile florets female. Fertile lemma ovate, 6 mm long, coriaceous, without keel, 3 -veined, $0-$ 3 -veined. Lemma apex acute. Palea coriaceous, without keels.

Flower and Fruit. Lodicules 3. Stigmas 2.
Male spikelets distinct from female, 1 flowered, deciduous with the fertile, ovate, $9-10 \mathrm{~mm}$ long, glabrous. Male spikelet glumes 2, linear, $7-8 \mathrm{~mm}$ long. Male spikelet lemma $9-10 \mathrm{~mm}$ long, 1 -veined, without cross-veins.

Distribution (TDWG). Continent. South America.
Country /Province /State. Mesoamerica, Northern South America, Western South America, Brazil. Panama. Surinam, Venezuela. Colombia, Ecuador, Peru.

Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: J.R. Swallen 3544, 18 Feb 1934-26 Feb 1934, Brazil: Maranhão (US-1613666).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. moderate. Culms of average height.
Classification. Subfamily Bambusoideae. Tribe: Olyreae.

Habit, Vegetative Morphology. Perennial. Rhizomes short. Culms geniculately ascending, slender, $15-35 \mathrm{~cm}$ long. Culm-internodes distally glabrous. Leaves cauline. Leaf-sheaths mostly shorter than adjacent culm internode. Leaf-sheath oral hairs setose. Ligule an eciliate membrane, membranous. Leafblade base with a brief petiole-like connection to sheath. Leaf-blades lanceolate, 3-7.6 cm long, 5-14 mm wide. Leaf-blade surface scaberulous, rough adaxially, pubescent (sometimes obscure). Leaf-blade margins serrulate. Leaf-blade apex acuminate. Monoecious, with male and female spikelets in the same inflorescence.

Inflorescence. Synflorescence on a specialized culm bearing a single leaf-blade.
Inflorescence composed of racemes, subtended by an inflated leaf-sheath. Racemes 1, single, erect, multilateral, $3-4 \mathrm{~cm}$ long, $6-8 \mathrm{~mm}$ wide. Rhachis fragile at the nodes. Rhachis internodes linear. Sexes mixed (in a cluster at each node). Spikelets subtended by an involucre. Fertile spikelets sessile, 1 in the cluster. Male spikelets pedicelled, 5 in a cluster. Involucre composed of imperfect spikelets, with pedicels forming a cup, oblong. Pedicels present, fused to each other, united along margins, oblong, flattened, 4 mm long, pubescent, tip rectangular.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets ovate, laterally compressed, compressed slightly, falling entire, deciduous with accessory branch structures.

Glumes. Glumes similar, exceeding apex of florets, thinner than fertile lemma. Lower glume ovate, 34 mm long, 1 length of upper glume, chartaceous, 1 -keeled, 3 -veined. Lower glume surface pubescent. Lower glume apex acute. Upper glume ovate, 3-4 mm long, 1 length of adjacent fertile lemma, chartaceous, 1 -keeled, 3 -veined. Upper glume surface pubescent. Upper glume apex acute.

Florets. Fertile florets female. Fertile lemma ovate, 5 mm long, coriaceous, without keel. Lemma surface scaberulous. Lemma apex acute. Palea 1-1.2 length of lemma, coriaceous, without keels. Palea apex acute.

Flower and Fruit. Lodicules 3. Anthers 15-25. Stigmas 2.
Male spikelets distinct from female, 1 flowered, deciduous with the fertile, ovate, 5 mm long, hairy. Male spikelet glumes 2.

Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil Northeast.
Maranhão.

Pariana multiflora R.P. Oliveira, Longhi-Wagner \& Hollowell. Syst. Bot. 33(2): 263, f. 1, 2, 4a, 5e,gh. (2008)

Illustrations (Journals): Systematic Botany (33: 263, Fig. 1 (2008)).
Classification. Subfamily Bambusoideae. Tribe: Olyreae.
Habit, Vegetative Morphology. Perennial. Culms erect, 65-90 cm long, 2 mm diam. Culm-nodes viscid. Lateral branches sparse. Leaves cauline, $10-15$ per branch. Leaf-sheaths pilose, outer margin hairy. Leaf-sheath oral hairs setose, $5-18 \mathrm{~mm}$ long, dark. Ligule an eciliate membrane, $0.3-0.5 \mathrm{~mm}$ long. Leafblade base asymmetrical, with a brief petiole-like connection to sheath, petiole $0.12-0.2 \mathrm{~cm}$ long. Leafblades lanceolate, $6-14 \mathrm{~cm}$ long, $12-19 \mathrm{~mm}$ wide, mid-green and purple, discolorous with last colour beneath. Leaf-blade surface scaberulous, rough adaxially. Leaf-blade margins scaberulous. Leaf-blade apex acuminate. Monoecious, with male and female spikelets in the same inflorescence.

Inflorescence. Synflorescence on the same culm as leaves.
Inflorescence composed of racemes, terminal and axillary ( $2-5$ per culm), exserted. Racemes 1 , single, erect, linear, multilateral, $3-7.5 \mathrm{~cm}$ long, $0.2-0.4 \mathrm{~mm}$ wide, bearing few fertile spikelets, bearing $5-10$ fertile spikelets on each (in whorls with male spikelets). Rhachis fragile at the nodes, subterete, puberulous on surface, terminating in a sterile spikelet. Rhachis internodes linear, $13.5-14 \mathrm{~mm}$ long. Rhachis internode tip cupuliform. Sexes mixed (in a whorl at each node). Spikelets appressed, subtended by an involucre. Fertile spikelets sessile, 1 in the cluster. Male spikelets pedicelled, 5 in a cluster. Involucre composed of imperfect spikelets, with pedicels forming a long tube, oblong, $13.5-15 \mathrm{~mm}$ long, base obconical. Pedicels present, fused to each other, united along margins, oblong, flattened, $7-10 \mathrm{~mm}$ long, pubescent, tip rectangular.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets lanceolate, dorsally compressed, compressed slightly, 13.5-15 mm long, $2-2.5 \mathrm{~mm}$ wide, falling entire, deciduous with accessory branch structures.

Glumes. Glumes similar, shorter than spikelet, thinner than fertile lemma. Lower glume oblong, 10-12 mm long, 1 length of upper glume, chartaceous, without keels. Lower glume surface puberulous. Lower glume apex acuminate or caudate. Upper glume oblong, $10-12 \mathrm{~mm}$ long, chartaceous, without keels. Upper glume apex acuminate or caudate.

Florets. Fertile florets female. Fertile lemma lanceolate, $13.5-14.5 \mathrm{~mm}$ long, $1.8-2.4 \mathrm{~mm}$ wide, coriaceous, yellow, without keel. Lemma apex acute. Palea 1 length of lemma, coriaceous, 2 -veined, without keels.

Flower and Fruit. Anthers 2, 1.8-2 mm long, yellow.
Male spikelets distinct from female, 1 flowered, deciduous with the fertile, lanceolate or oblong, 4-5 mm long, hairy (pubescent). Male spikelet glumes 2, lanceolate, 2-2.5 mm long. Male spikelet lemma 4-5 mm long, 3 -veined.

Distribution (TDWG). Continent. South America. Country /Province/State. Brazil. Brazil Southeast.
Espirito Santo.

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: J.R. Swallen 4873, 15 Jun 1934, Brazil: Par? Mosqueira (US-1613658).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. nervus, nerve; -ata, possessing. Spikelets with conspicuously nerved lemmas or glumes.

Classification. Subfamily Bambusoideae. Tribe: Olyreae.
Habit, Vegetative Morphology. Perennial. Rhizomes short. Culms erect, 90-130 cm long. Lateral branches lacking. Leaves cauline. Leaf-sheaths longer than adjacent culm internode, glabrous on surface or pilose. Leaf-sheath oral hairs scanty. Leaf-sheath auricles erect. Ligule an eciliate membrane, 3 mm long, truncate. Leaf-blade base with a brief petiole-like connection to sheath. Leaf-blades oblong, 15-26 cm long, $40-60 \mathrm{~mm}$ wide. Leaf-blade surface scabrous, rough abaxially. Leaf-blade apex acuminate. Monoecious, with male and female spikelets in the same inflorescence.

Inflorescence. Synflorescence on the same culm as leaves.
Inflorescence composed of racemes. Racemes 1, single, drooping, oblong, multilateral, 20 cm long, 13 mm wide. Rhachis fragile at the nodes. Spikelet packing crowded. Sexes mixed (in a cluster at each node). Spikelets appressed, subtended by an involucre. Fertile spikelets sessile, 1 in the cluster. Male spikelets pedicelled, 5 in a cluster. Involucre composed of imperfect spikelets, with pedicels forming a cup, oblong. Pedicels present, fused to each other, united along margins, cuneate, flattened, 3 mm long, puberulous, tip rectangular.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets lanceolate, dorsally compressed, 8 mm long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate, 8 mm long, chartaceous, without keels, 3 -veined. Lower glume lateral veins with cross-veins. Lower glume surface asperulous. Lower glume apex acute. Upper glume ovate, 8 mm long, chartaceous, 3 veined. Upper glume lateral veins with cross-veins. Upper glume surface asperulous. Upper glume apex acute.

Florets. Fertile florets female. Fertile lemma ovate, 6 mm long, coriaceous, without keel. Lemma surface scaberulous, rough above. Lemma apex acute. Palea 1 length of lemma, coriaceous, without keels.

Flower and Fruit. Lodicules 3. Stigmas 2.

Male spikelets distinct from female, 1 flowered, deciduous with the fertile, ovate, $6.5-8 \mathrm{~mm}$ long, hairy (glume margins). Male spikelet glumes 2, ovate, $5-6 \mathrm{~mm}$ long, $2-3$-veined. Male spikelet lemma $6.5-8$ mm long, 5 -veined.

Distribution (TDWG). Continent. South America.

Derivation (Clifford \& Bostock 2007): L. parvus, small; spica, thorn. Inflorescence of small spikes or racemes.

Classification. Subfamily Bambusoideae. Tribe: Olyreae.
Habit, Vegetative Morphology. Perennial, caespitose. Rhizomes elongated. Culms arching, 35-50 cm long, $1-2 \mathrm{~mm}$ diam. Culm-internodes thin-walled, distally with pubescent line. Culm-nodes pubescent. Lateral branches lacking. Leaves cauline, 6-13 per branch, distichous. Leaf-sheaths glabrous on surface, outer margin hairy. Leaf-sheath oral hairs setose, $6-12 \mathrm{~mm}$ long, dark. Ligule a ciliolate membrane, $0.2-$ 0.3 mm long. Leaf-blade base with a brief petiole-like connection to sheath, petiole $0.1-0.2 \mathrm{~cm}$ long, petiole pubescent. Leaf-blades lanceolate, $9-13 \mathrm{~cm}$ long, $20-30 \mathrm{~mm}$ wide. Monoecious, with male and female spikelets in the same inflorescence.

Inflorescence. Synflorescence on a separate leafless culm.
Inflorescence composed of racemes. Racemes 1, single, erect, linear, multilateral, 3 cm long. Rhachis fragile at the nodes, subterete, terminating in a sterile spikelet. Rhachis internodes linear, 9 mm long. Rhachis internode tip cupuliform. Sexes mixed (in a cluster at each node). Spikelets appressed, subtended by an involucre. Fertile spikelets sessile, 1 in the cluster. Male spikelets pedicelled, 5 in a cluster. Involucre composed of imperfect spikelets, with pedicels forming a long tube, oblong, $9-10 \mathrm{~mm}$ long, base obconical. Pedicels present, fused to each other, united along margins, oblong, flattened, 8 mm long, glabrous, tip rectangular.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets lanceolate, dorsally compressed, compressed slightly, 8 mm long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume oblong, 8 mm long, 1 length of upper glume, chartaceous, without keels, 1 -veined. Lower glume lateral veins absent. Lower glume margins ciliolate. Lower glume apex obtuse. Upper glume oblong, 8 mm long, chartaceous, without keels, 1 -veined. Upper glume lateral veins absent. Upper glume apex acute.

Florets. Fertile florets female. Fertile lemma oblong, 8 mm long, coriaceous, without keel. Lemma apex acute. Palea 1 length of lemma, coriaceous, 2 -veined, without keels.

Flower and Fruit. Lodicules 3, 1-1.5 mm long, veined. Anthers 2. Stigmas 2, terminally exserted. Ovary glabrous.

Male spikelets distinct from female, 1 flowered, deciduous with the fertile, ovate, 1.5 mm long, hairy. Male spikelet glumes 2. Male spikelet lemma 1.5 mm long.

Distribution (TDWG). Continent. South America.
Country /Province /State. Mesoamerica. Costa Rica.

Pariana radiciflora Sagot ex Doell. Mart. Fl. Bras. ii. II. 336. (1877).

IT: P.A. Sagot 711, 1857, French Guiana: Karouany (U).
Illustrations (Books): J.A.Steyermark et al, Flora of the Venezuelan Guayana Vol. 8 (2004) (211, Fig. 165).

Derivation (Clifford \& Bostock 2007): L. radix, root; flos, flower. Culms dimorphic with the fertile arising separately from the rhizome.

Classification. Subfamily Bambusoideae. Tribe: Olyreae.
Habit, Vegetative Morphology. Perennial, culms solitary or caespitose. Stolons absent or present. Culms erect, $20-100 \mathrm{~cm}$ long. Lateral branches lacking. Leaves cauline, $4-12$ per branch. Leaf-sheaths glabrous on surface or pubescent. Leaf-sheath oral hairs setose, $8-12 \mathrm{~mm}$ long. Leaf-sheath auricles absent or erect, $0-5 \mathrm{~mm}$ long. Ligule an eciliate membrane, $0.7-3 \mathrm{~mm}$ long. Leaf-blade base with a brief petiolelike connection to sheath, petiole $0.1-0.4 \mathrm{~cm}$ long, petiole glabrous or pubescent. Leaf-blades lanceolate or oblong, $12-23 \mathrm{~cm}$ long, $25-60 \mathrm{~mm}$ wide, dark green or light green, discolorous with last colour beneath. Leaf-blade apex acuminate. Monoecious, with male and female spikelets in the same inflorescence.

Inflorescence. Synflorescence on a separate leafless culm.
Inflorescence composed of racemes. Racemes 1, single, erect, oblong, multilateral, 6-11 cm long, 1014 mm wide. Rhachis fragile at the nodes, subterete. Spikelet packing crowded. Rhachis internodes linear. Rhachis internode tip cupuliform. Sexes mixed (in a cluster at each node). Spikelets appressed, subtended by an involucre. Fertile spikelets sessile, 1 in the cluster. Male spikelets pedicelled, 5 in a cluster. Involucre composed of imperfect spikelets, with pedicels forming a cup, oblong, $9-17 \mathrm{~mm}$ long, base obconical. Pedicels present, fused to each other, united along margins, cuneate, flattened, $2.5-4.2 \mathrm{~mm}$ long, glabrous to pubescent, tip rectangular.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets ovate, dorsally compressed, compressed slightly, 5-7 mm long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes similar, exceeding apex of florets, thinner than fertile lemma. Lower glume ovate, 57 mm long, 1 length of upper glume, chartaceous, without keels. Lower glume apex acute. Upper glume ovate, 5-7 mm long, chartaceous, without keels. Upper glume margins ciliolate. Upper glume apex obtuse.

Florets. Fertile florets female. Fertile lemma ovate, $4-6 \mathrm{~mm}$ long, coriaceous, without keel. Lemma apex acute. Palea 1 length of lemma, coriaceous, 2 -veined, without keels.

Flower and Fruit. Lodicules 3. Anthers (12-)18-24(-30). Stigmas 2, terminally exserted. Ovary glabrous.

Male spikelets distinct from female, 1 flowered, deciduous with the fertile, ovate, $5.5-8.5 \mathrm{~mm}$ long. Male spikelet glumes 2. Male spikelet lemma $5.5-8.5 \mathrm{~mm}$ long, 2-3 -veined.

Distribution (TDWG). Continent. South America.

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. simulo, resemble. Resembling another species, usually in the same genus.

Classification. Subfamily Bambusoideae. Tribe: Olyreae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, 60 cm long. Leaves cauline. Leafsheaths glabrous on surface. Leaf-sheath oral hairs scanty. Ligule an eciliate membrane. Leaf-blade base broadly rounded, with a brief petiole-like connection to sheath, petiole pubescent. Leaf-blades oblong, 8-12 cm long, $20-25 \mathrm{~mm}$ wide. Leaf-blade surface glabrous. Leaf-blade apex acuminate. Monoecious, with male and female spikelets in the same inflorescence.

Inflorescence. Synflorescence on a separate leafless culm.

Inflorescence composed of racemes. Racemes 1, single, erect, multilateral, 3.5-4.5 cm long, 8-10 mm wide. Rhachis fragile at the nodes, terminating in a sterile spikelet. Rhachis internodes linear. Sexes mixed (in a cluster at each node). Spikelets subtended by an involucre. Fertile spikelets sessile, 1 in the cluster. Male spikelets pedicelled, 5 in a cluster. Involucre composed of imperfect spikelets, with pedicels forming a cup, oblong. Pedicels present, fused to each other, united along margins, oblong, flattened, 3 mm long, pubescent or ciliate, hairy on surface or margins, tip rectangular.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets ovate, laterally compressed, compressed slightly, 6 mm long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate, 6 mm long, 1 length of upper glume, chartaceous, 1-keeled. Lower glume apex acuminate. Upper glume lanceolate, 6 mm long, 1.2 length of adjacent fertile lemma, chartaceous, 1-keeled. Upper glume apex acuminate.

Florets. Fertile florets female. Fertile lemma ovate, 5 mm long, coriaceous, without keel, 3 -veined, $0-$ 3 -veined. Lemma surface puberulous. Lemma apex obtuse. Palea coriaceous, without keels.

Flower and Fruit. Lodicules 3, oblong, 0.25 mm long, ciliate. Anthers 20. Filaments united in groups. Stigmas 2.

Male spikelets distinct from female, 1 flowered, deciduous with the fertile, ovate, 4 mm long, hairy. Male spikelet glumes 2, triangular, $2-3 \mathrm{~mm}$ long, awned ( 0.5 mm ). Male spikelet lemma 4 mm long, 3 veined, with cross-veins.

TYPE from Panama. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: C.W. Dodge \& P.H. Allen 17301, 5 Jan 1935, Panama: Panam? Río Indio, forest along small unnamed quebrada entering lake at 70 m level, elev. 70-80 m (US-1647098; IT: GH, MO-1090784).

Illustrations: None found.

Derivation (Clifford \& Bostock 2007): L. covered with short, bristle-like hairs. One or more organs covered with bristle-like hairs.

Classification. Subfamily Bambusoideae. Tribe: Olyreae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, $40-65 \mathrm{~cm}$ long. Culm-internodes distally glabrous or pubescent. Leaves cauline, 2-3 per branch. Leaf-sheaths longer than adjacent culm internode, pubescent. Leaf-sheath oral hairs lacking. Leaf-sheath auricles erect. Ligule an eciliate membrane, 2 mm long, pubescent on abaxial surface, truncate. Leaf-blade base with a brief petiole-like connection to sheath, petiole $0.3-0.5 \mathrm{~cm}$ long, petiole glabrous. Leaf-blades lanceolate or ovate, $12-15 \mathrm{~cm}$ long, $45-53 \mathrm{~mm}$ wide, grey-green or glaucous, discolorous with last colour beneath. Leaf-blade surface glabrous. Leaf-blade margins scabrous. Leaf-blade apex acuminate. Monoecious, with male and female spikelets in the same inflorescence.

Inflorescence. Synflorescence on a separate leafless culm.
Inflorescence composed of racemes. Racemes 1, single, erect, multilateral, 7 cm long, bearing 11-12 fertile spikelets on each. Rhachis fragile at the nodes, terminating in a sterile spikelet. Rhachis internodes linear. Sexes mixed (in a cluster at each node). Spikelets subtended by an involucre. Fertile spikelets sessile, 1 in the cluster. Male spikelets pedicelled, 5 in a cluster. Involucre composed of imperfect spikelets, with pedicels forming a cup, oblong. Pedicels present, fused to each other, united along margins, oblong, flattened, $2.5-3.5 \mathrm{~mm}$ long, villous, hairy below, tip rectangular.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets ovate, laterally compressed, compressed slightly, 6-6.7 mm long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate, 6-6.7 mm long, 1 length of upper glume, membranous, 1-keeled, 1 -veined. Lower glume lateral veins absent. Lower glume surface pubescent. Lower glume apex acute. Upper glume lanceolate, 6 6.7 mm long, $1.2-1.3$ length of adjacent fertile lemma, membranous, 1-keeled, 1 -veined. Upper glume lateral veins absent. Upper glume surface pubescent. Upper glume apex acute.

Florets. Fertile florets female. Fertile lemma ovate, $4.8-5 \mathrm{~mm}$ long, coriaceous, without keel. Palea without keels.

Flower and Fruit. Lodicules 3, oblong. Anthers 18, 1.8 mm long. Stigmas 2. Caryopsis with adherent pericarp, ovoid, 5 mm long, acute.

Male spikelets distinct from female, 1 flowered, deciduous with the fertile, ovate, 5-6 mm long. Male spikelet glumes 2, triangular, 4-5 mm long, muticous. Male spikelet lemma 5-6 mm long, 3 -veined.

Distribution (TDWG). Continent. South America.
Country /Province/State. Mesoamerica. Panama.

Classification. Subfamily Bambusoideae. Tribe: Olyreae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, $25-30 \mathrm{~cm}$ long. Leaves cauline. Leaf-sheaths glabrous on surface. Ligule an eciliate membrane. Leaf-blade base with a brief petiole-like connection to sheath, petiole 0.1 cm long, petiole glabrous. Leaf-blades lanceolate, $7-12 \mathrm{~cm}$ long, 30-50 mm wide. Leaf-blade surface smooth or scaberulous, rough abaxially. Leaf-blade apex acute. Monoecious, with male and female spikelets in the same inflorescence.

Inflorescence. Synflorescence on a separate leafless culm.
Inflorescence composed of racemes. Racemes 1 , single, erect, multilateral, 3.5 cm long, $5-6 \mathrm{~mm}$ wide. Rhachis fragile at the nodes, terminating in a sterile spikelet. Rhachis internodes linear. Sexes mixed (in a cluster at each node). Spikelets subtended by an involucre. Fertile spikelets sessile, 1 in the cluster. Male spikelets pedicelled, 5 in a cluster. Involucre composed of imperfect spikelets, with pedicels forming a cup, oblong. Pedicels present, fused to each other, united along margins, oblong, flattened, 3 mm long, pubescent, tip rectangular.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets ovate, laterally compressed, compressed slightly, 4 mm long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume lanceolate, 4 mm long, 1 length of upper glume, chartaceous, 1 -keeled. Lower glume margins ciliate. Lower glume apex acute. Upper glume ovate, 4 mm long, 1 length of adjacent fertile lemma, chartaceous, 1-keeled. Upper glume margins ciliate. Upper glume apex acute.

Florets. Fertile florets female. Fertile lemma ovate, 4 mm long, coriaceous, without keel, 3 -veined, $0-$ 3 -veined. Lemma apex acute, pubescent. Palea coriaceous, without keels.

Flower and Fruit. Lodicules 3. Anthers 6. Stigmas 2.
Male spikelets distinct from female, 1 flowered, deciduous with the fertile, ovate, 3 mm long, hairy. Male spikelet glumes 2, linear, $2.5-3 \mathrm{~mm}$ long. Male spikelet lemma 3 mm long, 1 -veined.

Distribution (TDWG). Continent. South America.

Country /Province/State. Mesoamerica, Western South America, Brazil. Panama. Colombia, Peru. Brazil North.

Amazonas, Acre, Rondonia. Amazonas.

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): Gk thrix, hair; stichos, row. Leaf-blades conspicuously hairy along their veins.

Classification. Subfamily Bambusoideae. Tribe: Olyreae.
Habit, Vegetative Morphology. Perennial. Culms erect, 50-60 cm long. Culm-internodes distally glabrous or pubescent. Leaves cauline. Leaf-sheaths pubescent. Leaf-sheath oral hairs setose. Ligule an eciliate membrane. Leaf-blade base with a brief petiole-like connection to sheath, petiole $0.5-0.7 \mathrm{~cm}$ long, petiole pubescent. Leaf-blades lanceolate, $13-25 \mathrm{~cm}$ long, $40-60 \mathrm{~mm}$ wide. Leaf-blade surface pubescent, hairy adaxially (on midrib). Leaf-blade apex acute. Monoecious, with male and female spikelets in the same inflorescence.

Inflorescence. Synflorescence on a separate leafless culm.
Inflorescence composed of racemes. Racemes 1, single, erect, multilateral, 6 cm long, $7-9 \mathrm{~mm}$ wide. Rhachis fragile at the nodes, terminating in a sterile spikelet. Rhachis internodes linear. Sexes mixed (in a cluster at each node). Spikelets subtended by an involucre. Fertile spikelets sessile, 1 in the cluster. Male spikelets pedicelled, 5 in a cluster. Involucre composed of imperfect spikelets, with pedicels forming a cup, oblong. Pedicels present, fused to each other, united along margins, oblong, flattened, $3-4 \mathrm{~mm}$ long, pubescent, hairy at base, tip rectangular.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets ovate, laterally compressed, compressed slightly, 7 mm long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate, 7 mm long, 1 length of upper glume, chartaceous, 1 -keeled. Lower glume surface pubescent. Lower glume apex acuminate. Upper glume lanceolate, 7 mm long, 1.4 length of adjacent fertile lemma, chartaceous, 1-keeled. Upper glume surface pubescent. Upper glume apex acuminate.

Florets. Fertile florets female. Fertile lemma ovate, 5 mm long, coriaceous, without keel, 3 -veined, $0-$ 3 -veined. Lemma apex acute. Palea coriaceous, without keels.

Flower and Fruit. Lodicules 3. Stigmas 2.
Male spikelets distinct from female, 1 flowered, deciduous with the fertile, ovate, $4.5-5 \mathrm{~mm}$ long, glabrous or hairy. Male spikelet glumes 2, triangular, 1.5 mm long. Male spikelet lemma $4.5-5 \mathrm{~mm}$ long, 3 -veined, without cross-veins.

Distribution (TDWG). Continent. South America.
Country /Province/State. Mesoamerica, Western South America, Brazil. Panama. Colombia, Peru. Brazil North.

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: E. Ule 5307, Oct 1900, Brazil: Amazonas: Rio Jurua (B; IT: K(fragm., US-2877974)).

Illustrations: None found.

Derivation (Clifford \& Bostock 2007): in honor of Ernst Heinrich Georg Ule (1854-1915) German botanist sometime resident in Brazil.

Classification. Subfamily Bambusoideae. Tribe: Olyreae.
Habit, Vegetative Morphology. Perennial. Culms erect, $30-50 \mathrm{~cm}$ long. Leaves cauline. Leaf-sheath oral hairs lacking or ciliate. Ligule an eciliate membrane. Leaf-blade base with a brief petiole-like connection to sheath. Leaf-blades lanceolate, $13-16 \mathrm{~cm}$ long, $37-40 \mathrm{~mm}$ wide. Leaf-blade margins scabrous. Leaf-blade apex acuminate. Monoecious, with male and female spikelets in the same inflorescence.

Inflorescence. Synflorescence on a separate leafless culm.
Inflorescence composed of racemes. Racemes 1, single, erect, multilateral, 5-7 cm long. Rhachis fragile at the nodes. Rhachis internodes linear. Sexes mixed (in a cluster at each node). Spikelets subtended by an involucre. Fertile spikelets sessile, 1 in the cluster. Male spikelets pedicelled, 6 in a cluster. Involucre composed of imperfect spikelets, with pedicels forming a cup, oblong. Pedicels present, fused to each other, united along margins, oblong, flattened, 3 mm long, pubescent, hairy at base, tip rectangular, winged.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets ovate, laterally compressed, compressed slightly, $7-8 \mathrm{~mm}$ long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate, $7-8 \mathrm{~mm}$ long, 1 length of upper glume, chartaceous, 1 -keeled, 1 -veined. Lower glume lateral veins absent. Lower glume surface puberulous. Lower glume apex acute. Upper glume lanceolate, 7-8 mm long, 1.5 length of adjacent fertile lemma, chartaceous, 1 -keeled, 1 -veined. Upper glume lateral veins absent. Upper glume surface puberulous. Upper glume apex acute.

Florets. Fertile florets female. Fertile lemma ovate, 5 mm long, coriaceous, without keel, 3 -veined, $0-$ 3 -veined. Lemma surface scaberulous, rough above. Lemma apex acute. Palea coriaceous, without keels.

Flower and Fruit. Lodicules 3, orbicular, 1 mm long. Anthers 20. Filaments united in a tube. Stigmas 2.

Male spikelets distinct from female, 1 flowered, deciduous with the fertile, ovate, $6-7 \mathrm{~mm}$ long. Male spikelet glumes 2, lanceolate or ovate (unequal), $3.5-4 \mathrm{~mm}$ long. Male spikelet lemma $6-7 \mathrm{~mm}$ long.

Distribution (TDWG). Continent. South America.
Country /Province /State. Northern South America, Western South America, Brazil. Venezuela. Bolivia, Colombia, Peru. Brazil North.

Illustrations (Journals): Ruizia (Gr Peru 13: 56 (1993)).
Derivation (Clifford \& Bostock 2007): L. velvety. Plant in whole or in part covered with dense short hairs.

Classification. Subfamily Bambusoideae. Tribe: Olyreae.
Habit, Vegetative Morphology. Perennial. Rhizomes short. Culms erect, $45-50 \mathrm{~cm}$ long. Culminternodes distally pubescent. Leaves cauline. Leaf-sheaths longer than adjacent culm internode, keeled, pubescent. Leaf-sheath oral hairs setose. Leaf-sheath auricles erect. Ligule an eciliate membrane. Leafblade base with a brief petiole-like connection to sheath. Leaf-blades lanceolate or ovate, $12-16 \mathrm{~cm}$ long, $20-46 \mathrm{~mm}$ wide. Leaf-blade surface pubescent, hairy on both sides. Leaf-blade apex acuminate. Monoecious, with male and female spikelets in the same inflorescence.

Inflorescence. Synflorescence on a separate leafless culm.
Inflorescence composed of racemes. Racemes 1, single, erect, multilateral, 5-6 cm long. Rhachis fragile at the nodes. Rhachis internodes linear. Sexes mixed (in a cluster at each node). Spikelets subtended by an involucre. Fertile spikelets sessile, 1 in the cluster. Male spikelets pedicelled, 5 in a cluster. Involucre
composed of imperfect spikelets, with pedicels forming a cup, oblong. Pedicels present, fused to each other, united along margins, oblong, flattened, $2-2.5 \mathrm{~mm}$ long, villous, hairy at base, tip rectangular.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets ovate, laterally compressed, compressed slightly, 5 mm long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes similar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 5 mm long, 1 length of upper glume, chartaceous, 1 -keeled, $1-3$-veined. Lower glume surface pubescent. Lower glume apex obtuse or acute. Upper glume ovate, 5 mm long, 1 length of adjacent fertile lemma, chartaceous, 1-keeled, 1-3 -veined. Upper glume surface pubescent. Upper glume apex obtuse or acute.

Florets. Fertile florets female. Fertile lemma ovate, 5 mm long, coriaceous, without keel. Lemma surface pubescent, hairy above. Lemma apex acute. Palea coriaceous, without keels.

Flower and Fruit. Lodicules 3. Anthers 2.5 mm long. Stigmas 2.
Male spikelets distinct from female, 1 flowered, deciduous with the fertile, ovate, 4.5 mm long, hairy. Male spikelet glumes 2, triangular, $2-2.5 \mathrm{~mm}$ long. Male spikelet lemma 4.5 mm long, 3 -veined.

Distribution (TDWG). Continent. South America.

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. vulgus, public; -are, pertaining to. Common in the wild or in cultivation.

Classification. Subfamily Bambusoideae. Tribe: Olyreae.
Habit, Vegetative Morphology. Perennial, caespitose. Stolons present. Culms erect, 40-60 cm long. Lateral branches lacking. Leaves cauline, 4-8 per branch. Leaf-sheaths mostly shorter than adjacent culm internode, puberulous. Leaf-sheath oral hairs lacking. Ligule an eciliate membrane. Leaf-blade base with a brief petiole-like connection to sheath, petiole $0.3-0.4 \mathrm{~cm}$ long, petiole pubescent. Leaf-blades lanceolate or oblong, $10-18 \mathrm{~cm}$ long, $30-45 \mathrm{~mm}$ wide. Leaf-blade surface smooth. Leaf-blade apex acute. Monoecious, with male and female spikelets in the same inflorescence.

Inflorescence. Synflorescence on a separate leafless culm.
Inflorescence composed of racemes. Racemes 1, single, erect, oblong, multilateral, $5-6 \mathrm{~cm}$ long. Rhachis fragile at the nodes, subterete. Spikelet packing crowded. Rhachis internodes linear. Rhachis internode tip cupuliform. Sexes mixed (in a cluster at each node). Spikelets appressed, subtended by an involucre. Fertile spikelets sessile, 1 in the cluster. Male spikelets pedicelled, 5 in a cluster. Involucre composed of imperfect spikelets, with pedicels forming a cup, oblong, $8-9 \mathrm{~mm}$ long, base obconical.

Pedicels present, fused to each other, united along margins, cuneate, flattened, 2 mm long, glabrous, tip rectangular.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets lanceolate, dorsally compressed, compressed slightly, 9 mm long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes similar, exceeding apex of florets, thinner than fertile lemma. Lower glume linear, 9 mm long, 1 length of upper glume, chartaceous, without keels, 1 -veined. Lower glume lateral veins absent. Lower glume margins ciliate. Lower glume apex acute. Upper glume ovate, 8 mm long, chartaceous, 1keeled, 1 -veined. Upper glume lateral veins absent. Upper glume margins ciliolate. Upper glume apex setaceously acuminate.

Florets. Fertile florets female. Fertile lemma ovate, 6-6.5 mm long, coriaceous, without keel. Lemma apex acute. Palea 1 length of lemma, coriaceous, without keels.

Flower and Fruit. Lodicules 3, 1.8 mm long. Anthers 20. Stigmas 2, terminally exserted. Caryopsis 3.5 mm long.

Male spikelets distinct from female, 1 flowered, deciduous with the fertile, ovate, 6-7 mm long. Male spikelet glumes 2, 5-6 mm long. Male spikelet lemma 6-7 mm long, 1 -veined.

Distribution (TDWG). Continent. South America.

## Parodiolyra aratitiyopensis J.R.Grande. Novon 21 (1): 40 (2011).

TYPE from Venezuela. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Amazonas, Dept. Rio Negro, Cerro Aratitiyope, ca 70 km al SSW de OcamoFeb. 1984, J.A.Steyarmark, P.Berry \& F.Delascio 130118 (holo: VEN; iso: VEN, MO).

Illustrations (Journals): Novon (21 (1): 41, Fig. 1 (2011)).
Classification. Subfamily Bambusoideae. Tribe: Olyreae.
Habit, Vegetative Morphology. Perennial. Culms erect, $30-35 \mathrm{~cm}$ long, 1.8 mm diam. Culminternodes distally glabrous. Culm-nodes brown, pubescent. Leaves cauline. Leaf-sheaths 3.2-6.4 cm long, striately veined, pilose. Ligule an eciliate membrane, 0.3 mm long, glabrous on abaxial surface or pubescent on abaxial surface, lacerate. Leaf-blade base truncate or broadly rounded, asymmetrical, with a brief petiole-like connection to sheath, petiole 0.1 cm long. Leaf-blades linear or lanceolate, $3-9.4 \mathrm{~cm}$ long, $7-16 \mathrm{~mm}$ wide. Leaf-blade surface scabrous, rough adaxially, pilose, hairy abaxially. Leaf-blade margins scabrous. Leaf-blade apex acute. Monoecious, with male and female spikelets in the same inflorescence.

Inflorescence. Inflorescence a panicle, terminal. Panicle open, oblong or ovate, 1.1-6 cm long, 0.2-5.6 cm wide. Panicle axis scabrous. Sexes segregated, on unisexual branches, with male below. Spikelets solitary. Fertile spikelets pedicelled. Male spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then
both fertile or the upper sterile. Spikelets elliptic or obovate, dorsally compressed, 3 mm long, 1.6 mm wide, breaking up at maturity, disarticulating below each fertile floret. Rhachilla internodes elongated between glumes and elongated below proximal fertile floret. Rhachilla elongation 0.3 mm long.

Glumes. Glumes similar, exceeding apex of florets, thinner than fertile lemma. Lower glume ovate, clasping, 3 mm long, 1 length of upper glume, chartaceous, without keels, 5 -veined. Lower glume surface scabrous, pilose, hairy below. Lower glume apex acute. Upper glume ovate, 3 mm long, chartaceous, without keels, 7 -veined. Upper glume surface scabrous, pilose, hairy below. Upper glume apex acute.

Florets. Fertile florets female. Fertile lemma lanceolate, dorsally compressed, 2.5 mm long, 1.2 mm wide, indurate, pallid, shiny, without keel. Lemma surface smooth, glabrous. Lemma apex apiculate, pubescent. Palea apex excavated.

Flower and Fruit. Lodicules 3.
Male spikelets distinct from female, 1 flowered, linear, $4.5-5 \mathrm{~mm}$ long. Male spikelet glumes absent. Male spikelet lemma $4.5-5 \mathrm{~mm}$ long, muticous.

Distribution (TDWG). Continent. South America.
Country /Province/State. Northern South America. Venezuela.

Parodiolyra colombiensis G. Davidse \& F. Zuloaga. Novon, 9(4): 587 (1999).

TYPE from Colombia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Colombia: Caquet? Región de Araracuara: alrededores de la pista aérea, 00.25 'S, $72.30^{\prime} \mathrm{W}, 200-300 \mathrm{~m}, 11$ Nov 1991, hierba, raquillas de la infrutescencia moradas, frutos verdes, D. Restrepo \& A. Matapi 467 (HT: COAH-017796; IT: COAH-020068, MO-5102566).

Illustrations (Journals): Novon (9: 588 Fig. 1 (1999)).
Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From Colombia.
Classification. Subfamily Bambusoideae. Tribe: Olyreae.
Habit, Vegetative Morphology. Perennial. Culm-internodes terete, thin-walled, 3-7 cm long, distally glabrous. Culm-nodes brown, glabrous or pubescent. Leaves cauline. Leaf-sheaths striately veined, glabrous on surface, outer margin hairy. Leaf-sheath oral hairs ciliate. Leaf-sheath auricles erect, 2-4 mm long. Ligule a ciliolate membrane. Leaf-blade base truncate, asymmetrical, with a brief petiole-like connection to sheath, petiole pubescent. Leaf-blades lanceolate or ovate, $8-14.5 \mathrm{~cm}$ long, $17-30 \mathrm{~mm}$ wide. Leaf-blade surface glabrous. Leaf-blade margins scabrous, glabrous or ciliate, hairy at base. Leaf-blade apex attenuate. Monoecious, with male and female spikelets in the same inflorescence.

Inflorescence. Inflorescence a panicle. Panicle open, pyramidal, 6-10 cm long. Primary panicle branches ascending, 1-6 -nate. Panicle axis scaberulous. Sexes segregated, on bisexual branches, with male below. Spikelets solitary. Fertile spikelets pedicelled. Male spikelets pedicelled. Pedicels present, 1.5-7 mm long, scaberulous.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets elliptic, dorsally compressed, $4-5 \mathrm{~mm}$ long, 1.3 mm wide, falling entire. Rhachilla internodes elongated between glumes and elongated below proximal fertile floret. Rhachilla elongation 0.6 mm long.

Glumes. Glumes similar, subequal in width, exceeding apex of florets, thinner than fertile lemma. Lower glume elliptic, $4-5 \mathrm{~mm}$ long, 0.9 length of upper glume, membranous, without keels, 3 -veined. Lower glume lateral veins with cross-veins. Lower glume surface scabrous. Lower glume apex acuminate. Upper glume elliptic, $4.2-4.6 \mathrm{~mm}$ long, membranous, without keels, 5 -veined. Upper glume lateral veins with cross-veins. Upper glume surface scabrous. Upper glume apex acuminate.

Florets. Fertile florets female. Fertile lemma elliptic, dorsally compressed, 3.4 mm long, 1.4 mm wide, indurate, without keel, 5 -veined, more than 3-veined. Lemma surface punctate. Palea indurate, without keels.

Flower and Fruit. Lodicules 3, 0.4 mm long, truncate. Anthers 3, 2.3-3 mm long. Stigmas 2.
Male spikelets distinct from female, 1 flowered, lanceolate, 4 mm long. Male spikelet glumes 2, ovate, 0.05 mm long. Male spikelet lemma 4 mm long, 3 -veined, muticous.

Distribution (TDWG). Continent. South America.
Country /Province/State. Western South America. Colombia.

Illustrations (Books): S.A.Renvoize, Gramineas de Bolivia (1998) (47, Fig. 9), J.A.Steyermark et al, Flora of the Venezuelan Guayana Vol. 8 (2004) (213, Fig. 167), E.Judziewicz, Flora of the Guianas, 187. Poaceae (1990) (449, Fig. 80).

Illustrations (Journals): Smithsonian Contributions to Botany (69, 67 (1989)), Ruizia (13:40, Fig.3f$h(1993)$ ).

Derivation (Clifford \& Bostock 2007): laterus, side; -ale, pertaining to. Inflorescence forming as a lateral shoot.

Classification. Subfamily Bambusoideae. Tribe: Olyreae.
Habit, Vegetative Morphology. Perennial. Culms scandent, 800 cm long, rooting from lower nodes. Culm-internodes thin-walled, distally glabrous. Culm-nodes swollen, pubescent to bearded. Leaves cauline. Leaf-sheaths pilose, with simple hairs or reflexed hairs, outer margin glabrous or hairy. Leaf-sheath auricles erect. Ligule a ciliate membrane, 0.2 mm long. Leaf-blade base broadly rounded to cordate, with a brief petiole-like connection to sheath, petiole $0.1-0.2 \mathrm{~cm}$ long. Leaf-blades lanceolate to ovate, $2.5-5 \mathrm{~cm}$ long, $0.5-1.3 \mathrm{~mm}$ wide. Leaf-blade venation parallel. Leaf-blade surface glabrous to pubescent. Leaf-blade margins ciliate. Leaf-blade apex acuminate (abruptly). Monoecious, with male and female spikelets in the same inflorescence.

Inflorescence. Inflorescence a panicle. Peduncle glabrous. Panicle open, pyramidal. Primary panicle branches spreading, $1.2-3 \mathrm{~cm}$ long. Panicle branches straight to flexuous, glabrous to pilose. Sexes segregated, on bisexual branches, with male below. Spikelets solitary. Fertile spikelets pedicelled. Male spikelets pedicelled. Pedicels present, filiform, glabrous to pubescent, tip rectangular.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets elliptic, dorsally compressed, $2-2.6 \mathrm{~mm}$ long, 1.2 mm wide, falling entire. Rhachilla internodes elongated between glumes or elongated below proximal fertile floret.

Glumes. Glumes similar, subequal in width, exceeding apex of florets, thinner than fertile lemma. Lower glume elliptic, 1 length of upper glume, membranous, without keels, 5-7 -veined. Lower glume lateral veins without connecting veins or with cross-veins. Lower glume surface glabrous to pilose. Upper glume elliptic, membranous, without keels, 3-5 -veined. Upper glume lateral veins without cross-veins or with cross-veins. Upper glume surface glabrous to hispid.

Florets. Fertile florets female. Fertile lemma ovate or obovate, dorsally compressed, indurate, pallid, shiny, without keel, 7 -veined, more than 3 -veined. Lemma apex obtuse. Palea obovate, indurate, 2 -veined, without keels. Palea surface smooth.

Flower and Fruit. Lodicules 3. Anthers 3, 2 mm long, purple. Stigmas 2. Caryopsis ellipsoid, light brown. Hilum linear, $0.5-0.75$ length of caryopsis.

Male spikelets distinct from female, 1 flowered, lanceolate, glabrous to hairy. Male spikelet glumes absent. Male spikelet lemma muticous.

Distribution (TDWG). Continent. South America.
Country /Province /State. Mesoamerica, Northern South America, Western South America, Brazil. Costa Rica, Panama. Guyana, Surinam, Venezuela. Bolivia, Colombia, Ecuador, Peru. Brazil North. Amazonas, Pará, Roraima.

Illustrations (Books): J.A.Steyermark et al, Flora of the Venezuelan Guayana Vol. 8 (2004) (213, Fig. 166), E.Judziewicz, Flora of the Guianas, 187. Poaceae (1990) (449, Fig 80).

Illustrations (Journals): Smithsonian Contributions to Botany (69: 69 (1989)).
Derivation (Clifford \& Bostock 2007): in honor of Philipp Luetzelberg (1880-1948) German botanist.
Classification. Subfamily Bambusoideae. Tribe: Olyreae.
Habit, Vegetative Morphology. Perennial, caespitose. Rhizomes short. Culms geniculately ascending or scandent, $70-160 \mathrm{~cm}$ long. Culm-internodes thin-walled, distally glabrous. Culm-nodes swollen, black, glabrous. Leaves cauline. Leaf-sheaths pilose. Ligule a ciliolate membrane, 0.4 mm long. Leaf-blade base broadly rounded, asymmetrical, with a brief petiole-like connection to sheath, petiole 0.2 cm long, petiole pilose. Leaf-blades lanceolate or ovate, $8-11 \mathrm{~cm}$ long, $16-31 \mathrm{~mm}$ wide, stiff, glaucous. Leaf-blade surface scabrous, glabrous or pubescent, hairy abaxially. Leaf-blade margins ciliate, hairy at base. Leaf-blade apex obtuse. Monoecious, with male and female spikelets in the same inflorescence.

Inflorescence. Inflorescence a panicle, terminal and axillary. Panicle open, pyramidal, $5-8 \mathrm{~cm}$ long, $4.5-8 \mathrm{~cm}$ wide. Primary panicle branches whorled at lower nodes. Panicle branches scaberulous, pubescent in axils. Sexes segregated, on unisexual branches or bisexual branches, with male below. Spikelets solitary. Fertile spikelets pedicelled. Male spikelets pedicelled, 2-3 in a cluster. Pedicels present, (female) filiform, smooth, pubescent, tip rectangular.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets elliptic or ovate, dorsally compressed, 3-3.6 mm long, 1.5-1.7 mm wide, breaking up at maturity, disarticulating below each fertile floret. Rhachilla internodes elongated between glumes or elongated below proximal fertile floret.

Glumes. Glumes similar, subequal in width, exceeding apex of florets, thinner than fertile lemma. Lower glume ovate, clasping, 3-3.6 mm long, 1 length of upper glume, chartaceous, without keels, 7-9veined. Lower glume surface scabrous, glabrous or pubescent, hairy at apex. Lower glume apex acute. Upper glume ovate, $3-3.6 \mathrm{~mm}$ long, chartaceous, without keels, 5-7 -veined. Upper glume surface scabrous, glabrous or pubescent, hairy above. Upper glume apex acute.

Florets. Fertile florets female. Fertile lemma lanceolate, dorsally compressed, 1.9-2.5 mm long, 1-1.2 mm wide, indurate, pallid, shiny, without keel, 5 -veined, more than 3 -veined. Lemma surface smooth, glabrous. Lemma apex acute, papillose. Palea obovate, indurate, 2 -veined, without keels. Palea surface smooth. Palea apex excavated.

Flower and Fruit. Lodicules 3. Anthers 3, 3.2 mm long. Stigmas 2. Ovary glabrous. Caryopsis orbicular, 1.4 mm long, light brown. Hilum linear, $0.5-0.75$ length of caryopsis.

Male spikelets distinct from female, 1 flowered, lanceolate, $4.2-5.1 \mathrm{~mm}$ long, glabrous to hairy. Male spikelet glumes absent. Male spikelet lemma 3-4-veined, muticous.

Distribution (TDWG). Continent. South America.

(Smith. Contrib. Bot. No. 69 : 36 (1989) as Olyra).
Derivation (Clifford \& Bostock 2007): Gk. mikros, small; anthos, flower. Spikelets small.
Classification. Subfamily Bambusoideae. Tribe: Olyreae.
Habit, Vegetative Morphology. Perennial, caespitose. Rhizomes short. Culms scandent or erect, 100400 cm long, woody, without nodal roots. Culm-internodes terete, thin-walled, distally glabrous. Culmnodes glabrous to pubescent. Lateral branches sparse. Leaves cauline. Leaf-sheaths narrower than blade at the collar, pubescent. Ligule a ciliolate membrane, $2.4-15 \mathrm{~mm}$ long, pubescent on abaxial surface, obtuse to acute. Leaf-blade base broadly rounded, with a brief petiole-like connection to sheath. Leaf-blades lanceolate to oblong, 13-32(-55) cm long, 2.4-12(-13) mm wide, discolorous with last colour beneath. Leaf-blade venation parallel, with distinct cross veins. Leaf-blade apex acuminate. Monoecious, with male and female spikelets in the same inflorescence.

Inflorescence. Inflorescence a panicle. Peduncle hispid above. Panicle open, pyramidal, 10-32 cm long, $4-14 \mathrm{~cm}$ wide. Primary panicle branches bearing spikelets almost to the base. Panicle branches smooth, hispid. Sexes segregated, on bisexual branches, with male below. Spikelets solitary. Fertile spikelets pedicelled. Male spikelets pedicelled. Pedicels present, linear, terete, glabrous or ciliate.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets ovate, dorsally compressed, $5.4-12.8 \mathrm{~mm}$ long, breaking up at maturity, disarticulating below each fertile floret.

Glumes. Glumes persistent, similar, subequal in width, exceeding apex of florets, thinner than fertile lemma. Lower glume ovate, 1.1 length of upper glume, herbaceous, without keels, 5 -veined. Lower glume primary vein eciliate or ciliate. Lower glume lateral veins without connecting veins or with cross-veins (seldom). Lower glume surface glabrous to pilose. Lower glume apex caudate, awned, 1 -awned, awn 0.52.5 mm long. Upper glume ovate, 1.2 length of adjacent fertile lemma, herbaceous, without keels, 3-5 veined. Upper glume primary vein eciliate or ciliolate (seldom). Upper glume lateral veins without crossveins or with cross-veins ( 10 X lens). Upper glume surface glabrous to hispid. Upper glume apex caudate, muticous or awned, 1 -awned, awn $0-1 \mathrm{~mm}$ long.

Florets. Fertile florets female. Fertile lemma ovate, dorsally compressed, $2.8-3.5 \mathrm{~mm}$ long, indurate, pallid or dark brown, dull, without keel, more than 3-veined. Lemma lateral veins obscure. Lemma surface pitted. Lemma margins involute. Lemma apex acute. Palea ovate, involute, 0.9 length of lemma, indurate, without keels. Palea surface scabrous. Palea apex obtuse.

Flower and Fruit. Lodicules 3. Stigmas 2. Ovary glabrous. Caryopsis with adherent pericarp, dark brown. Embryo 0.2 length of caryopsis. Hilum linear, 1 length of caryopsis.

Male spikelets distinct from female, 1 flowered, $7.4-9.3 \mathrm{~mm}$ long. Male spikelet glumes absent. Male spikelet lemma 7-9 -veined, awned.

Distribution (TDWG). Continent. South America.

T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Riedel 161, 1831, Brazil: Esperanca: Bahia (LE-TRIN-1131.01; IT: GH, K, LE-TRIN-1131.02, US (fragm. ex LE-TRIN)).

Recent Synonyms: Olyra ramosissima Trin., Mem. Acad. Petersb. Ser. 6 3. 2. 116. (1834).
Illustrations (Books): S.A.Renvoize, The Grasses of Bahia, 1984 (25, Fig. 6 as Olyra), E.J.Judziewicz et al, American Bamboos (1999) (301, Fig. 183).

Illustrations (Journals): Smithsonian Contributions to Botany (69: 74 (1989)).
Derivation (Clifford \& Bostock 2007): L. ramus, branch; -osa, abundance; -issima, most. Inflorescence an open, much branched panicle.

Classification. Subfamily Bambusoideae. Tribe: Olyreae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms geniculately ascending or scandent, slender, $20-150 \mathrm{~cm}$ long, woody, without nodal roots. Culm-internodes thin-walled, distally glabrous. Culm-nodes swollen, glabrous. Lateral branches ample, arising from upper culm. Leaves cauline. Leafsheaths ribbed, glabrous on surface or pilose, with reflexed hairs, outer margin hairy. Ligule a ciliolate membrane, 0.3 mm long. Leaf-blade base broadly rounded, asymmetrical, with a brief petiole-like connection to sheath, petiole $0.2-0.3 \mathrm{~cm}$ long, petiole glabrous or pubescent. Leaf-blades lanceolate or ovate, $3.6-13 \mathrm{~cm}$ long, $9-20 \mathrm{~mm}$ wide, stiff. Leaf-blade surface smooth or scabrous, rough abaxially, glabrous or pilose, hairy abaxially. Leaf-blade margins scabrous. Leaf-blade apex abruptly acute or acute, apiculate. Monoecious, with male and female spikelets in the same inflorescence.

Inflorescence. Inflorescence a panicle, terminal and axillary, with 2-3 peduncles per sheath. Panicle open or contracted, linear or oblong, $3-8 \mathrm{~cm}$ long, $1-4 \mathrm{~cm}$ wide. Panicle branches pubescent in axils. Sexes segregated, on unisexual branches or bisexual branches, with male below. Spikelets solitary. Fertile spikelets pedicelled. Male spikelets pedicelled, 2 in a cluster. Pedicels present, (female) filiform or cuneate, tip rectangular.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets elliptic or ovate, dorsally compressed, (4-) $5-5.8 \mathrm{~mm}$ long, $1.9-$ 2.8 mm wide, breaking up at maturity, disarticulating below each fertile floret. Rhachilla internodes elongated between glumes or elongated below proximal fertile floret. Rhachilla elongation 0.3 mm long (below floret).

Glumes. Glumes similar, subequal in width, exceeding apex of florets, thinner than fertile lemma. Lower glume elliptic or ovate, $4-5.1 \mathrm{~mm}$ long, 1.1 length of upper glume, chartaceous or herbaceous, without keels, 7-9 -veined. Lower glume lateral veins with cross-veins. Lower glume surface scabrous, glabrous or puberulous. Lower glume apex obtuse or acute. Upper glume elliptic or ovate, $3.9-5 \mathrm{~mm}$ long, chartaceous or herbaceous, without keels, 5-9 -veined. Upper glume lateral veins with cross-veins. Upper glume surface scabrous, glabrous or puberulous. Upper glume apex obtuse or acute.

Florets. Fertile florets female. Fertile lemma elliptic, dorsally compressed, 3-3.5 mm long, indurate, pallid or dark green or light brown, shiny, without keel, 5 -veined, more than 3-veined. Lemma lateral veins obscure. Lemma surface smooth, with distinct germination flap, glabrous. Lemma margins involute. Lemma apex obtuse or acute, with a shallow excavation or papillose. Palea elliptic or obovate, involute, 1 length of lemma, indurate, 2 -veined, without keels. Palea surface smooth. Palea apex obtuse, excavated.

Flower and Fruit. Lodicules 3. Anthers 3. Stigmas 2. Ovary with a few apical hairs. Caryopsis with adherent pericarp, ellipsoid, 2-2.5 mm long, light brown. Hilum linear, 0.75 length of caryopsis.

Male spikelets distinct from female, 1 flowered, lanceolate, $3-4.3 \mathrm{~mm}$ long, glabrous to hairy. Male spikelet glumes absent. Male spikelet lemma 3 -veined, muticous.

Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil Northeast.
Bahia. Bahia.

Recent Synonyms: Panicum dusenii Hack. Fedde, Repert. Nov. Sp. 8: 513 (1910).
Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 1, Aristidoideae a Pharoideae (2012) (369), J.A.Steyermark et al, Flora of the Venezuelan Guayana Vol. 8 (2004).

Illustrations (Journals): Systematic Botany (33: 71, Fig. 2 (2008)).
Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From Csrdoba, Mexico.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Boivinellinae.
Habit, Vegetative Morphology. Perennial. Culms decumbent, 25 cm long, rooting from lower nodes. Culm-internodes distally glabrous. Lateral branches ample. Leaves cauline. Leaf-sheaths mostly shorter than adjacent culm internode, outer margin hairy. Leaf-sheath oral hairs ciliate. Ligule a ciliate membrane. Leaf-blade base broadly rounded. Leaf-blades spreading, lanceolate, $5-7 \mathrm{~cm}$ long, $10-12 \mathrm{~mm}$ wide, stiff. Leaf-blade midrib evident. Leaf-blade venation distinct. Leaf-blade margins scabrous. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, obovate, 6-12 cm long, 3-7 cm wide, contracted about secondary branches. Primary panicle branches spreading, $1-2$-nate. Panicle branches scaberulous. Spikelets solitary or in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, acute, $3-5 \mathrm{~mm}$ long, 1.5 mm wide, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume lanceolate, 0.66 length of spikelet, membranous, without keels, 3 -veined. Lower glume surface puberulous. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface puberulous. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, puberulous, acute. Fertile lemma lanceolate, dorsally compressed, $3-5 \mathrm{~mm}$ long, indurate, without keel, more than 3-veined. Lemma margins involute. Lemma apex mucronate. Palea involute, indurate.

Flower and Fruit. Anthers 3, $0.3-0.4 \mathrm{~mm}$ long. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. North America, South America.
Country /Province /State. Mexico. Central Mexico, Northeast Mexico, Gulf (Mexico), Southwest Mexico. Mesoamerica, Northern South America, Western South America, Brazil, Southern South America. Costa Rica, Guatemala, Honduras, Nicaragua, Panama. Guyana, Venezuela. Bolivia, Colombia, Ecuador. Brazil Southeast, Brazil South. Argentina Northwest.

Derivation (Clifford \& Bostock 2007): L. from Misiones State, Argentina.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Boivinellinae.

Habit, Vegetative Morphology. Perennial. Culms rambling, 30-120 cm long. Culm-internodes 2-12 cm long. Culm-nodes glabrous or pubescent. Lateral branches ample, arising from lower culm. Leafsheaths $1.5-5 \mathrm{~cm}$ long, mostly shorter than adjacent culm internode, pilose, with tubercle-based hairs. Leafsheath oral hairs lacking. Ligule a ciliate membrane. Leaf-blade base symmetrical, with a false petiole. Leaf-blades linear or lanceolate, 4-12 cm long, 5-11 mm wide. Leaf-blade midrib conspicuous. Leaf-blade surface glabrous or pubescent, hairy on both sides. Leaf-blade margins scabrous, ciliate, hairy at base. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle, terminal and axillary. Axillary inflorescences different from terminal (cleistogamous), compact or enclosed. Panicle open, ovate, 17-24 cm long, 12-18 cm wide. Primary panicle branches spreading. Panicle axis scabrous, with scattered hairs or pubescent. Panicle branches scabrous, glabrous or pubescent, pubescent in axils. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, $2.4-3.1 \mathrm{~mm}$ long, $1-$ 1.5 mm wide, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $1.6-2.8 \mathrm{~mm}$ long, 0.75-0.8 length of spikelet, membranous, without keels, $3-5$-veined. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5-7-veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5-7 -veined, acute. Fertile lemma elliptic, dorsally compressed, $2-2.6 \mathrm{~mm}$ long, indurate, yellow, without keel. Lemma surface papillose. Lemma margins involute. Lemma apex apiculate. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil, Southern South America. Brazil West Central, Brazil Southeast, Brazil South. Argentina Northeast, Paraguay, Uruguay.

Mato Grosso, Sao Paulo Parana. Mato Grosso do Sul. Minas Gerais, Sao Paulo. Paraná, Rio Grande do Sul, Santa Catarina. Buenos Aires, Corrientes, Entre Rios, Misiones.

Derivation (Clifford \& Bostock 2007): L. ovulum, small egg; fero, bear. Anthoecia egg-shaped.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Boivinellinae.
Habit, Vegetative Morphology. Perennial. Culms decumbent, $40-120 \mathrm{~cm}$ long, $1-2 \mathrm{~mm}$ diam., rooting from lower nodes. Culm-internodes distally glabrous. Culm-nodes glabrous or pubescent. Lateral branches ample. Leaf-sheaths glabrous on surface or pilose, with tubercle-based hairs, outer margin hairy. Ligule an eciliate membrane, $0.2-0.4 \mathrm{~mm}$ long, erose. Leaf-blade base cordate, asymmetrical, with a brief petiole-like connection to sheath. Leaf-blades lanceolate, $5.5-12 \mathrm{~cm}$ long, $8-12 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pilose, sparsely hairy, with tubercle-based hairs.

Inflorescence. Inflorescence a panicle, terminal and axillary. Axillary inflorescences different from terminal (spikelets cleistogamous, pubescent). Panicle open, pyramidal, 13-30 cm long, 13-26 cm wide. Primary panicle branches 1-2 -nate. Panicle branches bearded in axils. Spikelets appressed, solitary or in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, obtuse, $3.1-3.6 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $2.2-2.6 \mathrm{~mm}$ long, 0.75 length of spikelet, membranous, without keels, 3 -veined. Lower glume lateral veins prominent. Lower glume apex obtuse. Upper glume ovate, $2.9-3.2 \mathrm{~mm}$ long, 1 length of spikelet, membranous, without keels, 5-7 -veined. Upper glume lateral veins prominent. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, $2.4-3.1 \mathrm{~mm}$ long, 1 length of spikelet, membranous, 7 -veined, prominently veined, acute. Fertile lemma obovate, dorsally compressed, $2.4-3.1 \mathrm{~mm}$ long, indurate, shiny, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1.1-1.7 mm long, orange.
Distribution (TDWG). Continent. South America.

Derivation (Clifford \& Bostock 2007): Gk. pas, all, whole; thrix, hair. Plant softly papillose.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Boivinellinae.
Habit, Vegetative Morphology. Perennial, mat forming. Culms rambling, 6-25 cm long, 1 mm diam., rooting from lower nodes. Culm-internodes distally pubescent. Lateral branches lacking. Leaf-sheaths pilose, with tubercle-based hairs. Ligule a ciliolate membrane, $0.2-0.3 \mathrm{~mm}$ long. Leaf-blade base asymmetrical. Leaf-blades ovate, $3.5-8 \mathrm{~cm}$ long, $7-10 \mathrm{~mm}$ wide. Leaf-blade surface pubescent.

Inflorescence. Inflorescence a panicle, terminal and axillary. Axillary inflorescences present in upper axils, enclosed. Panicle open, pyramidal, $2-10 \mathrm{~cm}$ long, $1-8 \mathrm{~cm}$ wide, bearing few spikelets, contracted about primary branches. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, acute, 2.2-2.8 mm long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $1.6-2.3 \mathrm{~mm}$ long, 0.75 length of spikelet, membranous, without keels, 3 -veined. Lower glume surface pubescent. Lower glume apex obtuse. Upper glume ovate, $2.2-2.7 \mathrm{~mm}$ long, 1 length of spikelet, membranous, without keels, 5-7 -veined. Upper glume surface pubescent. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, $2-2.5 \mathrm{~mm}$ long, 1 length of spikelet, membranous, 5-6-veined, without midvein or
with obscure midvein, pubescent, acute. Fertile lemma elliptic or obovate, dorsally compressed, 1.9-2.2 mm long, indurate, shiny, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers $3,0.3 \mathrm{~mm}$ long, retained within floret, pallid. Caryopsis ellipsoid, 0.9-1.4 mm long, light brown or red.

Distribution (TDWG). Continent. South America.

## Parodiophyllochloa penicillata (Nees ex Trin.) Zuluoaga \& Morrone. Systematic Botany 33: 74

 (2008).Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online (as Panicum).

TYPE from Brazil. Basionym or Replaced Name: Panicum penicillatum Nees ex Trin., Gram. Pan. :196 (1826). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Langsdorff, see TRIN-0677.02, Panicum discolor Nees ex Trin..

Recent Synonyms: Panicum discolor Trin. ex Nees, non Bieler(1807), Agrost. Bras. 144. (1829).
Illustrations (Journals): Ann. Missouri Bot. Gard. (80: 180, Fig. 36 (1993) as Panicum).
Derivation (Clifford \& Bostock 2007): L. penicillus, a small brush; -ata, possessing. With racemes arising in verticils.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Boivinellinae.
Habit, Vegetative Morphology. Perennial. Culms leaning or scandent, 500-1000 cm long, rooting from lower nodes. Culm-internodes terete, solid, $8-18 \mathrm{~cm}$ long, distally glabrous. Culm-nodes brown, glabrous or pubescent. Lateral branches ample, arising from lower culm. Leaf-sheaths $10-14 \mathrm{~cm}$ long, glabrous on surface or pilose, with tubercle-based hairs, outer margin hairy. Ligule a ciliate membrane, 0.5 mm long. Collar dark, glabrous or pubescent. Leaf-blade base asymmetrical, with a false petiole, petiole pubescent. Leaf-blades lanceolate, $18-32 \mathrm{~cm}$ long, $12-32 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pubescent. Leaf-blade margins scabrous. Leaf-blade apex attenuate.

Inflorescence. Inflorescence a panicle. Peduncle glabrous. Panicle open, ovate, effuse, 30-45 cm long, $20-40 \mathrm{~cm}$ wide. Panicle axis smooth or scaberulous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, angular, flexuous, scaberulous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, 3-4.2 mm long, 1.11.4 mm wide, falling entire.

Glumes. Glumes dissimilar, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, $2.8-$ 3.6 mm long, 1 length of upper glume, 1 length of spikelet, membranous, without keels, 3-5 -veined. Lower glume surface pubescent, hairy above, inner surface scabrous. Lower glume apex acuminate. Upper glume elliptic, 3-4 mm long, 1 length of spikelet, membranous, without keels, (7-)9-11 -veined. Upper glume lateral veins prominent. Upper glume surface pubescent, hairy above, inner surface pubescent. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 9-11-veined, prominently veined, acute. Fertile lemma ovate, dorsally compressed, $3.2-3.7 \mathrm{~mm}$ long, $1-1.3 \mathrm{~mm}$ wide, indurate, yellow, without keel. Lemma surface papillose. Lemma margins involute, pubescent. Lemma apex apiculate, pubescent. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp, ellipsoid, 2.2-2.4 mm long. Embryo 0.5 length of caryopsis. Hilum punctiform.

Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil West Central, Brazil North, Brazil Southeast.
Minas Gerais, Rio de Janeiro, Espirito Santo. Distrito Federal, Goiás. Bahia. Minas Gerais, Rio de Janeiro.

Illustrations (Journals): Systematic Botany (33: 71, Fig. 3 (2008)).
Derivation (Clifford \& Bostock 2007): Gk. rhiza, a root; gony, knee. Runners root at the nodes.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Boivinellinae.
Habit, Vegetative Morphology. Perennial. Culms rambling, 10-50 cm long, rooting from lower nodes. Culm-internodes elliptical in section, $2-7 \mathrm{~cm}$ long, distally glabrous or pubescent. Leaf-sheaths $1-3.5 \mathrm{~cm}$ long, mostly shorter than adjacent culm internode, glabrous on surface, outer margin hairy. Ligule a ciliate membrane, $0.3-0.6 \mathrm{~mm}$ long. Leaf-blade base broadly rounded, asymmetrical, with a false petiole. Leafblades lanceolate or ovate, $4-9 \mathrm{~cm}$ long, $9-22 \mathrm{~mm}$ wide, mid-green or purple, discolorous with last colour beneath. Leaf-blade midrib evident. Leaf-blade surface glabrous or pubescent, sparsely hairy. Leaf-blade margins scaberulous.

Inflorescence. Inflorescence a panicle, terminal and axillary. Axillary inflorescences different from terminal (cleistogamus), compact. Panicle open, ovate, $1.5-7 \mathrm{~cm}$ long, $1-6 \mathrm{~cm}$ wide. Panicle axis scabrous, glabrous or hispid. Panicle branches flexuous, scabrous, glabrous or hispid, pubescent in axils. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, angular, smooth or scaberulous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, $2.6-3.3 \mathrm{~mm}$ long, $1.4-$ 1.6 mm wide, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $1.6-2.7 \mathrm{~mm}$ long, 0.5-0.75 length of spikelet, membranous, without keels, 3 -veined. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, acute. Fertile lemma elliptic, dorsally compressed, $2.3-2.7 \mathrm{~mm}$ long, indurate, yellow, shiny, without keel, 5 -veined, more than 3-veined. Lemma surface papillose. Lemma margins involute. Lemma apex apiculate. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp, ovoid, 1.6-1.8 mm long. Embryo 0.5 length of caryopsis. Hilum elliptic.

Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil, Southern South America. Brazil Southeast, Brazil South.

x Pascoleymus bowdenii (B.Boivin) Barkworth. Sida 22 (1): 499 (2006).
Basionym or Replaced Name: XAgroelymus bowdenii B. Boivin, Naturaliste Canad. 94(4): 520 (1967). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Canada: Alberta, Beaverlodge,

Illustrations (Books): M.E.Barkworth et al, Flora of North America north of Mexico Vol 24 Poaceae, part 1 (2007) (353).

Classification. Subfamily Pooideae.

Pascopyrum smithii (Rydb.) Barkworth \& D.R. Dewey. Amer. J. Bot. 72(5): 772 (1985).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online (as Elymus), U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from USA. Basionym or Replaced Name: Agropyron smithii Rydb., Mem. New York Bot. Gard. 1: 64 (1900). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: USA: Upper Missouri [Rv.?], Geyer (HT: MO).

Recent Synonyms: Elymus smithii (Rydb.) Gould, Madrono, 9: 127 (1947).
Illustrations (Books): K.F.Best, et al, Prairie Grasses (1971) (41 as Agropyron smithii), M.E.Barkworth et al, Flora of North America north of Mexico Vol 24 Poaceae, part 1 (2007) (352), F.W.Gould, The Grasses of Texas (1975) (169, Fig. 85 as Agropyron smithii).

Classification. Subfamily Pooideae. Tribe: Triticeae.
Habit, Vegetative Morphology. Perennial, culms solitary or caespitose. Rhizomes elongated. Culms $30-90 \mathrm{~cm}$ long. Leaf-sheaths glabrous on surface or puberulous, outer margin glabrous or hairy. Leafsheath auricles absent or falcate. Ligule an eciliate membrane, 1 mm long, truncate. Leaf-blades involute, $2-7 \mathrm{~mm}$ wide, stiff, glaucous. Leaf-blade surface smooth or scabrous, rough adaxially, glabrous. Leaf-blade apex attenuate.

Inflorescence. Inflorescence composed of racemes. Racemes 1, single, bilateral, $6-20 \mathrm{~cm}$ long. Rhachis flattened, scabrous on margins. Spikelet packing broadside to rhachis, 0.5 their length apart. Rhachis internodes linear, $7-10 \mathrm{~mm}$ long. Spikelets appressed, solitary or in pairs. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 5-12 fertile florets, with diminished florets at the apex. Spikelets of 2 or more fertile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets elliptic to oblong, laterally compressed, $15-25 \mathrm{~mm}$ long, breaking up at maturity, disarticulating above glumes but not between florets. Rhachilla internodes scaberulous.

Glumes. Glumes collateral, persistent, similar, shorter than spikelet. Lower glume lanceolate, 10-12 mm long, 1 length of upper glume, coriaceous, without keels, 3-7 -veined. Lower glume apex setaceously acuminate. Upper glume lanceolate, $10-12 \mathrm{~mm}$ long, 1 length of adjacent fertile lemma, coriaceous, without keels, 5-7 -veined. Upper glume apex setaceously acuminate.

Florets. Fertile lemma lanceolate to oblong, 10 mm long, coriaceous, $5-7$-veined, more than 3 -veined. Lemma lateral veins obscure. Lemma surface glabrous or pubescent, hairy at base. Lemma margins eciliate or pubescent. Lemma apex acuminate, mucronate. Palea 1 length of lemma. Palea keels scabrous. Apical sterile florets resembling fertile though underdeveloped.

Flower and Fruit. Lodicules 2, membranous. Anthers 3. Stigmas 2. Ovary pubescent on apex. Caryopsis with adherent pericarp.

Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), D.Sharp, D. \& B.K.Simon, AusGrass (2002).

T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: S.T. Blake 10947, 31 Mar 1936, Australia: Queensland: Maranoa Dist. (BRI; IT: CANB, L, US-2726312).

Illustrations (Books): S.W.L.Jacobs, R.D.B.Whalley \& D.J.B.Wheeler,, Grasses of New South Wales, 4th edn (2008) (322), T.D.Stanley \& E.Ross, Flora of South East Queensland, Gramineae (1989) (211, Fig. 33), D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002).

Derivation (Clifford \& Bostock 2007): L. albus, white: villus, shaggy hair; -osum, abundance. Plant in whole or in part covered with long, white hairs.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, slender, $25-50 \mathrm{~cm}$ long, compressible, 3-5 -noded. Culm-nodes glabrous. Lateral branches sparse. Leaf-sheaths keeled, hirsute, with tubercle-based hairs, outer margin hairy. Ligule a fringe of hairs, $0.5-1 \mathrm{~mm}$ long. Leaf-blades $7-15$ cm long, $1-4 \mathrm{~mm}$ wide. Leaf-blade surface hirsute, hairy on both sides, with tubercle-based hairs. Leafblade margins scabrous. Leaf-blade apex acute.

Inflorescence. Inflorescence composed of racemes. Racemes 6-10, borne along a central axis, appressed, flexuous, unilateral, $1-3 \mathrm{~cm}$ long, simple or with branchlets at base of longer racemes. Central inflorescence axis $8-20 \mathrm{~cm}$ long, pilose, tip filiform. Rhachis angular, $0.25-0.4 \mathrm{~mm}$ wide, with scattered hairs, scabrous on margins, terminating in a barren extension, extension bristle-like, extension $0.5-2 \mathrm{~mm}$ long. Spikelet packing abaxial, 2 -rowed. Spikelets ascending, solitary. Fertile spikelets pedicelled. Pedicels present, $0.2-2.4 \mathrm{~mm}$ long, bearing a few hairs, tip discoid.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or ovate, dorsally compressed, plano-convex, acute, $1.5-1.9 \mathrm{~mm}$ long, $1-1.2 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes shorter than spikelet, thinner than fertile lemma. Lower glume oblate, clasping, 0.5 length of spikelet, membranous, without keels, 3 -veined. Lower glume apex obtuse. Upper glume elliptic or orbicular, 0.9 length of spikelet, membranous, without keels, 5-7 -veined. Upper glume lateral veins parallel at apex, all extending to apex. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5 -veined, acute. Fertile lemma elliptic or ovate, $1.5-1.9 \mathrm{~mm}$ long, indurate, without keel. Lemma surface rugulose, with distinct germination flap. Lemma margins involute. Lemma apex acute. Palea reflexed at apex, indurate, 2-keeled. Palea surface rugose.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Australasia.
Country /Province/State. Australia. Queensland, New South Wales.
North, Central, South East. Coast, Western Slopes, Western Plains.

Images: D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002);.
Derivation (Clifford \& Bostock 2007): L. bent backwards. With spikelets bent backwards from the rhachis.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Perennial, caespitose, clumped loosely. Basal innovations extravaginal. Culms geniculately ascending or decumbent, weak, $40-90 \mathrm{~cm}$ long, compressible, 4-6 -noded, without nodal roots or rooting from lower nodes. Culm-internodes smooth or scaberulous. Culm-nodes glabrous. Lateral branches ample. Leaf-sheaths keeled, glabrous on surface, outer margin glabrous or hairy. Ligule a ciliate membrane, 1 mm long. Leaf-blades $10-25 \mathrm{~cm}$ long, $3-8 \mathrm{~mm}$ wide. Leaf-blade surface scabrous. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes 5-10, borne along a central axis, distant, flexuous, unilateral, $1-7 \mathrm{~cm}$ long, simple or with branchlets at base of longer racemes. Central inflorescence axis $10-30 \mathrm{~cm}$ long, tip filiform. Rhachis angular, scabrous on margins, terminating in a barren extension, extension bristle-like. Spikelet packing abaxial, crowded, 2 -rowed. Spikelets deflexed, solitary. Fertile spikelets pedicelled. Pedicels present, 0.5 mm long, tip discoid.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or ovate, dorsally compressed, gibbous, acute, $2.5-2.75 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes shorter than spikelet, thinner than fertile lemma. Lower glume oblate, clasping, gibbous, 0.33-0.5 length of spikelet, membranous, without keels, 3-5 -veined. Lower glume apex obtuse or acute. Upper glume oblong, 0.9 length of spikelet, membranous, without keels, 5-7 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5 -veined, acute. Fertile lemma ovate, gibbous, $2.5-2.75 \mathrm{~mm}$ long, indurate, without keel. Lemma surface rugose, with distinct germination flap. Lemma margins involute. Lemma apex acute. Palea reflexed at apex, indurate, 2-keeled. Palea surface rugose.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Australasia.
Country /Province/State. Australia. Queensland, New South Wales.
North, Central, South East. Coast, Tablelands, Western Slopes, Western Plains.

Paspalidium basicladum D.K.Hughes. Kew Bull. 1923, 318. (1923).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), D.Sharp, D. \& B.K.Simon, AusGrass (2002).

TYPE from Australia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: ST: Stoward 200, Australia: Western Australia: Kiminoppin ST: Stoward 139, Australia: Transcontinental Railway, east of Coolgardie ST: Drummond s.n., Australia.

Illustrations (Books): J.P.Jessop, G.R.M. Dashorst \& F.M.James, Grasses of South Australia (2006) (477, Fig 409 as Setaria basiclada).

Images: D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002);,

Derivation (Clifford \& Bostock 2007): L. basis, base; Gk. klados, branch. Culms much branched from lower nodes.

Classification. Subfamily Panicoideae. Tribe: Paniceae.
Habit, Vegetative Morphology. Annual. Culms erect or geniculately ascending, 20-70 cm long, 3-6 noded. Culm-nodes glabrous. Leaf-sheaths keeled, glabrous on surface. Ligule a fringe of hairs, 0.8-1.2 mm long. Leaf-blades flat or conduplicate, $4.5-18 \mathrm{~cm}$ long, 2-6 mm wide. Leaf-blade surface scabrous, glabrous.

Inflorescence. Inflorescence composed of racemes. Racemes borne along a central axis, appressed, unilateral, $2-4.5 \mathrm{~cm}$ long, bearing 9-20 fertile spikelets on each. Central inflorescence axis $8-20 \mathrm{~cm}$ long, tip filiform. Rhachis angular, scabrous on margins, terminating in a barren extension, extension bristle-like, extension $1.5-6 \mathrm{~mm}$ long. Spikelet packing abaxial, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $0.4-0.5 \mathrm{~mm}$ long, tip discoid.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or oblong, dorsally compressed, planoconvex, $2.5-3 \mathrm{~mm}$ long, $1.1-1.3 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes shorter than spikelet or reaching apex of florets, thinner than fertile lemma. Lower glume oblong, $1.2-1.9 \mathrm{~mm}$ long, $0.5-0.66$ length of spikelet, membranous, without keels, $3-5$-veined. Lower glume apex obtuse. Upper glume elliptic, 2.3-2.8 mm long, 0.9-1 length of spikelet, membranous, without keels, 7 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, $2.2-2.9 \mathrm{~mm}$ long, 1 length of spikelet, membranous, 5-7-veined, obtuse or acute. Fertile lemma elliptic, $2.3-2.8 \mathrm{~mm}$ long, indurate, without keel. Lemma surface rugose. Lemma margins involute. Lemma apex acute. Palea reflexed at apex, with a basal protruberance, indurate, 2-keeled. Palea surface rugose.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Australasia.
Country /Province /State. Australia. Western Australia, Northern Territory, South Australia, Queensland.

Eremean, South-West. Central Australia. NW \& Lake Eyre, Southern. North, Inland.
Paspalidium breviflorum Vickery. Telopea, 1 (1): 40 (1975).
Accepted by: U.Quattrocchi, CRC World Dictionary of Grasses (2006).
TYPE from Australia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Australia: New South Wales: North Coast: Richmond River, May 1912, Foster \& Sons s.n. (HT: NSW8946).

Illustrations (Books): S.W.L.Jacobs, R.D.B.Whalley \& D.J.B.Wheeler,, Grasses of New South Wales, 4th edn (2008) (322).

Derivation (Clifford \& Bostock 2007): L. brevis, short; flos, flower. Spikelets short.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Perennial. Culms geniculately ascending, weak, 20-40 cm long, 3-5 noded, without nodal roots or rooting from lower nodes. Culm-nodes glabrous. Lateral branches ample. Leaf-sheaths keeled, glabrous on surface, outer margin hairy. Ligule a fringe of hairs, 0.5 mm long. Leafblades 4-9 cm long, 2-3.5 mm wide. Leaf-blade surface scabrous, glabrous or pilose, sparsely hairy. Leafblade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes $5-10$, borne along a central axis, flexuous, unilateral, $0.5-1.5 \mathrm{~cm}$ long. Central inflorescence axis $11-20 \mathrm{~cm}$ long, glabrous, tip filiform. Rhachis angular, 0.4 mm wide, scabrous on margins, terminating in a barren extension, extension bristlelike, extension $1-2 \mathrm{~mm}$ long. Spikelet packing abaxial, crowded, 2 -rowed. Spikelets ascending, solitary. Fertile spikelets pedicelled. Pedicels present, $0.25-0.5 \mathrm{~mm}$ long, tip discoid.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets orbicular, dorsally compressed, plano-convex, obtuse, $1.8-2 \mathrm{~mm}$ long, $1.2-1.3 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes shorter than spikelet, thinner than fertile lemma. Lower glume oblate, clasping, gibbous, $0.4-0.5$ length of spikelet, membranous, without keels, 3 -veined. Lower glume apex acute. Upper glume orbicular, 0.9 length of spikelet, membranous, without keels, $7-9$-veined. Upper glume lateral veins parallel at apex. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, orbicular, 1 length of spikelet, membranous, 5 -veined, with veins transversely connected at apex, obtuse. Fertile lemma elliptic, gibbous, $1.8-2 \mathrm{~mm}$ long, indurate, without keel. Lemma surface rugose, with distinct germination flap. Lemma margins involute. Lemma apex apiculate. Palea reflexed at apex, indurate, 2-keeled. Palea surface rugose.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Australasia.
Country /Province /State. Australia. Queensland, New South Wales.
Central, Inland. Tablelands.

Paspalidium caespitosum C.E.Hubb. Kew Bull. 1934, 446. (1934).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), D.Sharp, D. \& B.K.Simon, AusGrass (2002).

TYPE from Australia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Australia: Queensland: Darling Downs Dist.: near Goondiwindi, May 1933, Hirschfield s.n. (HT: K).

Illustrations (Books): S.W.L.Jacobs, R.D.B.Whalley \& D.J.B.Wheeler,, Grasses of New South Wales, 4th edn (2008) (322), T.D.Stanley \& E.Ross, Flora of South East Queensland, Gramineae (1989) (211, Fig. 33), D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002).

Derivation (Clifford \& Bostock 2007): L. caespes, grass that has been cut; -osa, abundance. Habit tufted.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Perennial, caespitose, clumped densely. Culms erect, slender, 20-45 cm long, 3-6 -noded. Culm-nodes glabrous. Lateral branches lacking or sparse. Leaf-sheaths glabrous on surface. Ligule a fringe of hairs, 0.5 mm long. Leaf-blades involute or convolute, $10-25 \mathrm{~cm}$ long, $1-1.5$ mm wide. Leaf-blade surface smooth or scaberulous, glabrous. Leaf-blade apex attenuate.

Inflorescence. Inflorescence composed of racemes. Racemes 7-10, borne along a central axis, flexuous, unilateral, $1-2.5 \mathrm{~cm}$ long. Central inflorescence axis $8-16 \mathrm{~cm}$ long, tip filiform. Rhachis angular, scabrous on margins, terminating in a barren extension, extension bristle-like, extension $1-2 \mathrm{~mm}$ long. Spikelet packing abaxial, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $0.25-$ 0.5 mm long, tip discoid.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or ovate, dorsally compressed, plano-convex, subacute, $1.8-2.2 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes shorter than spikelet, thinner than fertile lemma. Lower glume oblate, clasping, 0.5 length of spikelet, membranous, without keels, 1-3 -veined. Lower glume apex obtuse. Upper glume elliptic, 0.75 length of spikelet, membranous, without keels, 5-7 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5 -veined, acute. Fertile lemma elliptic, 1.8-2.2 mm long, indurate, pallid, shiny, without keel, 5 -veined, more than 3-veined. Lemma surface striate, rugulose. Lemma margins involute. Lemma apex apiculate. Palea reflexed at apex, indurate, 2-keeled. Palea surface rugose.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Australasia.
Country /Province /State. Australia. Queensland, New South Wales.
North, Central, South East, Inland. Western Slopes, Western Plains.

Paspalidium chapmanii (Vasey) R.W. Pohl. Novon, 2(2): 106: (1992).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from USA. Basionym or Replaced Name: Panicum chapmanii Vasey, Bull. Torrey Bot. Club 11(6): 61 (1884). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: ST: A.W. Chapman 1071, USA: Florida (US-823762). LT: H. Chapmann s.n., USA: Florida: southern Florida (US80518). LT designated by Hitchcock \& Chase, Contr. U.S. Natl. Herb. 15: 24 (1910).

Illustrations (Books): M.E.Barkworth et al, Flora of North America north of Mexico Vol 25 Poaceae, part 2 (2003) (547 as Setaria chapmanii, Panicum chapmanii).

Derivation (Clifford \& Bostock 2007): In honor of Alvan Wentworth Chapman (1809-1899) United States botanist.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, slender, $40-100 \mathrm{~cm}$ long. Culmnodes glabrous. Lateral branches lacking or sparse. Leaf-sheaths wider than blade at the collar, glabrous on surface, outer margin hairy. Ligule a fringe of hairs. Leaf-blades erect, flat or involute, $15-40 \mathrm{~cm}$ long, 2-5 mm wide, stiff. Leaf-blade surface scabrous, rough on both sides.

Inflorescence. Inflorescence composed of racemes. Racemes borne along a central axis, distant, appressed, paucilateral, $1-3.5 \mathrm{~cm}$ long, bearing few fertile spikelets, bearing $8-15$ fertile spikelets on each. Central inflorescence axis $15-35 \mathrm{~cm}$ long, tip with blunt extension. Rhachis subterete, terminating in a barren extension, extension bristle-like, extension 3-6 mm long. Spikelet packing abaxial, irregular. Spikelets solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, subacute, 1.8-2.2 mm long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.33 length of spikelet, membranous, without keels, 3 -veined. Lower glume apex obtuse. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 5-7 -veined. Upper glume lateral veins with cross-veins. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5-7 -veined, obtuse or acute. Fertile lemma elliptic, $1.8-2.2 \mathrm{~mm}$ long, indurate, without keel. Lemma surface rugulose. Lemma margins involute. Lemma apex acute. Palea reflexed at apex, indurate. Palea surface rugose.

Distribution (TDWG). Continent. North America, South America.
Country /Province /State. Southeastern USA, Mexico. Florida. Southeast Mexico. Mesoamerica, Caribbean. Bahamas, Cuba.

Quintana Roo, Yucatan.
Paspalidium clementii (Domin) C.E.Hubb. Kew Bull. 1934, 447 (1934).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), D.Sharp, D. \& B.K.Simon, AusGrass (2002).

Illustrations (Books): J.P.Jessop, G.R.M. Dashorst \& F.M.James, Grasses of South Australia (2006) (479, Fig 411 and Pl. 17 as Setaria constricta), S.W.L.Jacobs, R.D.B.Whalley \& D.J.B.Wheeler,, Grasses of New South Wales, 4th edn (2008) (323).

Images: D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002);
Derivation (Clifford \& Bostock 2007): L. constringo, bind together. Panicle branches held erect.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rootstock evident. Basal innovations extravaginal. Culms erect, $10-60 \mathrm{~cm}$ long, $4-5$-noded. Culm-internodes distally pubescent. Culm-nodes pubescent. Lateral branches ample. Leaf-sheaths keeled, antrorsely scabrous, glabrous on surface or pilose, with tubercle-based hairs. Ligule a fringe of hairs, 1.25 mm long. Leaf-blades $7-15 \mathrm{~cm}$ long, $2-3 \mathrm{~mm}$ wide. Leaf-blade surface scabrous, rough adaxially, glabrous or pilose, with tubercle-based hairs. Leaf-blade apex attenuate.

Inflorescence. Inflorescence composed of racemes. Racemes 5-10, borne along a central axis, unilateral, $2-3 \mathrm{~cm}$ long, bearing few fertile spikelets. Central inflorescence axis $7-15 \mathrm{~cm}$ long, pubescent, tip filiform. Rhachis angular, 0.4 mm wide, pubescent on surface, scabrous on margins, terminating in a barren extension, extension bristle-like, extension 3-6 mm long. Spikelet packing abaxial, irregular, 2 rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $0.25-1.5 \mathrm{~mm}$ long, tip discoid.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, acute, $2.25-3.5 \mathrm{~mm}$ long, falling entire. Rhachilla internodes elongated between glumes or elongated below basal sterile floret or elongated below proximal fertile floret.

Glumes. Glumes shorter than spikelet, thinner than fertile lemma. Lower glume oblate, clasping, 0.60.66 length of spikelet, membranous, without keels, 3-5 -veined. Lower glume surface glabrous or
puberulous. Lower glume apex acute. Upper glume orbicular, 0.75-0.9 length of spikelet, membranous, without keels, 7-9 -veined. Upper glume apex obtuse or acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5 -veined, sulcate, acute. Fertile lemma elliptic, $2.25-3.5 \mathrm{~mm}$ long, indurate, without keel. Lemma surface rugulose, with distinct germination flap. Lemma margins involute. Lemma apex acute. Palea reflexed at apex, indurate, 2-keeled. Palea surface rugose.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Australasia.
Country /Province /State. Australia. Western Australia, Northern Territory, South Australia, Queensland, New South Wales, Victoria.

Eremean, South-West. Victoria R \& Barkly Tableland, Central Australia. NW \& Lake Eyre, Southern. North, Central, South East, Inland. Coast, Tablelands, Western Slopes, Western Plains.

Paspalidium criniforme S. T. Blake. Proc. Roy. Soc. Queensl. 1xii. 98 (1952).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), D.Sharp, D. \& B.K.Simon, AusGrass (2002).

TYPE from Australia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: IT: S.T. Blake 5282, 10 Mar 1934, Australia: Queensland, Moreton, Brisbane (L).

Illustrations (Books): S.W.L.Jacobs, R.D.B.Whalley \& D.J.B.Wheeler,, Grasses of New South Wales, 4th edn (2008) (323).

Images: D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002);
Derivation (Clifford \& Bostock 2007): L. crinum, hair; forma, appearance. Leaf-blades fine.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Perennial. Rootstock evident. Basal innovations extravaginal. Culms geniculately ascending, slender, $10-60 \mathrm{~cm}$ long, $4-7$-noded, rooting from lower nodes. Culm-internodes smooth, distally glabrous. Culm-nodes glabrous. Lateral branches sparse. Leaf-sheaths keeled, smooth, glabrous on surface or pilose, with tubercle-based hairs. Ligule a fringe of hairs, $0.3-0.5 \mathrm{~mm}$ long. Leafblades flat or involute, $5-10 \mathrm{~cm}$ long, $1-2.5 \mathrm{~mm}$ wide. Leaf-blade surface scaberulous, glabrous or pilose, sparsely hairy, with tubercle-based hairs. Leaf-blade apex attenuate.

Inflorescence. Inflorescence composed of racemes. Racemes 4-6, borne along a central axis, appressed, flexuous, unilateral, $1-2 \mathrm{~cm}$ long, bearing few fertile spikelets, bearing $4-8$ fertile spikelets on each, simple or secondarily branched. Central inflorescence axis $2.5-12 \mathrm{~cm}$ long, tip filiform. Rhachis angular, 0.15 mm wide, scabrous on margins, terminating in a barren extension, extension bristle-like, extension 2 mm long. Spikelet packing abaxial, distant, regular, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $0.5-1 \mathrm{~mm}$ long, scabrous, tip discoid.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate or elliptic, dorsally compressed, planoconvex, acute, $2-2.25 \mathrm{~mm}$ long, $0.9-1 \mathrm{~mm}$ wide, falling entire. Rhachilla internodes elongated between glumes or elongated below basal sterile floret or elongated between basal sterile florets.

Glumes. Glumes shorter than spikelet, thinner than fertile lemma. Lower glume ovate, 0.5-0.66 length of spikelet, membranous, without keels, 3(-5) -veined. Lower glume apex acute. Upper glume elliptic, $0.75-0.85$ length of spikelet, membranous, without keels, 5-7 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5 -veined, sulcate, acute. Fertile lemma elliptic, $2-2.25 \mathrm{~mm}$ long, indurate, without keel. Lemma surface rugulose. Lemma margins involute. Lemma apex acute. Palea reflexed at apex, indurate, 2-keeled.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Australasia.
Country /Province /State. Australia. Queensland, New South Wales.
Central, South East, Inland. Coast, Tablelands, Western Plains.

Paspalidium desertorum (A.Rich.) Stapf. Prain, Fl. Trop. Afr. ix. 585 (1920).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Eritrea. Basionym or Replaced Name: Panicum desertorum A. Rich., Tent. Fl. Abyss. 2: 365-366 (1850)
. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Crescit in locis arenosis provinciae Choho, inter mare rubrum et Abyssiniam proprie dictam, Quartin Dillon s.n.

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. desertum, desert. Of deserts, that is, from arid places.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rootstock evident. Stolons absent or present. Culms erect or geniculately ascending, $10-60 \mathrm{~cm}$ long. Ligule a fringe of hairs. Leaf-blades flat or conduplicate, $3-25 \mathrm{~cm}$ long, $1-4(-8) \mathrm{mm}$ wide. Leaf-blade apex attenuate.

Inflorescence. Inflorescence composed of racemes. Racemes borne along a central axis, unilateral, $0.5-4 \mathrm{~cm}$ long. Central inflorescence axis $5-30 \mathrm{~cm}$ long. Rhachis wingless, angular, $0.2-0.4 \mathrm{~mm}$ wide, glabrous on surface or puberulous on surface, terminating in a barren extension, extension subulate. Spikelet packing abaxial, regular, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, acute, $1.7-2.6 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets or shorter than spikelet, thinner than fertile lemma. Lower glume ovate, $0.33-0.5$ length of spikelet, membranous, without keels, 3 -veined. Lower glume apex truncate or obtuse. Upper glume ovate, 0.75-1 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, acute. Fertile lemma elliptic, $1.5-2.5 \mathrm{~mm}$ long, indurate, without keel, 5 -veined, more than 3 -veined. Lemma surface granulose, unwrinkled or rugulose. Lemma margins involute. Palea reflexed at apex, indurate.

Distribution (TDWG). Continent. Africa, Temperate Asia.
Country /Province /State. Northeast Tropical Africa, East Tropical Africa. Eritrea, Ethiopia (inc. Eritrea), Somalia, Sudan. Kenya. Arabian Peninsula. Oman, Saudi Arabia.

Paspalidium disjunctum S. T. Blake. Proc. Roy. Soc. Queensl., 84: 65 (1973).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), D.Sharp, D. \& B.K.Simon, AusGrass (2002).

TYPE from Australia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Australia: Queensland: Taylor Range, S.T. Blake 19899 (HT: BRI-131628).

Illustrations (Books): T.D.Stanley \& E.Ross, Flora of South East Queensland, Gramineae (1989) (211, Fig. 33), D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002).

Derivation (Clifford \& Bostock 2007): L. disjunco, separate. Occurring in widely separated localities.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Perennial, caespitose. Basal innovations extravaginal. Culms erect or geniculately ascending, $35-70 \mathrm{~cm}$ long, 3-4 -noded. Culm-internodes smooth or scaberulous. Culm-nodes glabrous. Lateral branches lacking or sparse. Leaf-sheaths outer margin hairy. Leaf-sheath oral hairs bearded. Ligule a fringe of hairs, $0.4-0.5 \mathrm{~mm}$ long. Collar glabrous or pilose. Leaf-blades flat or involute, $7-15 \mathrm{~cm}$ long, $2-5 \mathrm{~mm}$ wide. Leaf-blade surface scaberulous, rough adaxially or on both sides. Leaf-blade margins scabrous. Leaf-blade apex acute.

Inflorescence. Inflorescence composed of racemes. Racemes 6-12, borne along a central axis, distant, unilateral, $0.5-1 \mathrm{~cm}$ long. Central inflorescence axis $7-25 \mathrm{~cm}$ long. Rhachis angular, $0.2-0.3 \mathrm{~mm}$ wide, scabrous on margins, terminating in a barren extension, extension subulate, extension $0.8-1.5 \mathrm{~mm}$ long. Spikelet packing abaxial. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, reduced to a stump, $0.2-0.5 \mathrm{~mm}$ long, scabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or ovate, laterally compressed, gibbous, acute, $1.8-2.4 \mathrm{~mm}$ long, $1-2.5 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes similar, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, 0.5 length of spikelet, membranous, without keels, $3-5$-veined. Lower glume primary vein extending to apex. Lower glume apex acute. Upper glume ovate, gibbous, $0.6-0.8$ length of spikelet, cartilaginous, without keels, 7-9 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, with palea or without significant palea. Lemma of lower sterile floret ovate, 1 length of spikelet, cartilaginous, 5 -veined, sulcate, obtuse. Palea of lower sterile floret 0.5-1 mm long. Fertile lemma elliptic, laterally compressed, gibbous, $1.8-2.4 \mathrm{~mm}$ long, indurate, without keel. Lemma surface rugulose. Lemma margins involute. Lemma apex acute. Palea reflexed at apex, indurate.

Flower and Fruit. Anthers $3,0.9 \mathrm{~mm}$ long.
Distribution (TDWG). Continent. Tropical Asia, Australasia.
Country /Province/State. Papuasia. New Guinea. Australia. Northern Territory, Queensland.
Darwin \& Gulf. North, Central, South East, Inland.
Paspalidium distans (Trin.) D.K.Hughes. Kew Bull. 1923, 317 (1923).

Images: D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002);,
Derivation (Clifford \& Bostock 2007): L. disto, be apart. Spikelets widely separated in inflorescence.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect or geniculately ascending, slender, $30-70(-100) \mathrm{cm}$ long, 2-4 -noded. Culm-internodes smooth or scaberulous. Culm-nodes glabrous. Lateral branches sparse, extravaginal. Leaves basal and cauline. Leaf-sheaths without keel or keeled, glabrous on surface, outer margin glabrous or hairy. Ligule a fringe of hairs, 0.5 mm long. Leaf-blades $5-15 \mathrm{~cm}$ long, $1-4 \mathrm{~mm}$ wide. Leaf-blade surface scaberulous, rough on both sides, glabrous or pilose, sparsely hairy, hairy abaxially. Leaf-blade apex attenuate.

Inflorescence. Inflorescence composed of racemes. Racemes 4-10, borne along a central axis, distant, unilateral, $0.5-3 \mathrm{~cm}$ long. Central inflorescence axis $7-15 \mathrm{~cm}$ long, glabrous, tip filiform. Rhachis narrowly winged, angular, terminating in a barren extension, extension subulate, extension $1-2 \mathrm{~mm}$ long. Spikelet packing abaxial, regular, 2 -rowed. Spikelets solitary. Fertile spikelets sessile or pedicelled. Pedicels absent or present, reduced to a stump, $0.25-0.5 \mathrm{~mm}$ long, tip discoid.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, gibbous, acute, 1.8-2.2 mm long, falling entire.

Glumes. Glumes dissimilar, shorter than spikelet, thinner than fertile lemma. Lower glume ovate to oblate, clasping, 0.33-0.5 length of spikelet, membranous, without keels, 3-5 -veined. Lower glume apex obtuse or acute. Upper glume ovate, 0.75 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex obtuse or acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, sulcate, acute. Fertile lemma ovate,
$1.8-2.2 \mathrm{~mm}$ long, indurate, without keel, 5 -veined, more than 3-veined. Lemma lateral veins obscure. Lemma surface granulose, rugulose. Lemma margins involute. Lemma apex acute. Palea reflexed at apex, indurate. Palea surface granular.

Flower and Fruit. Anthers 3, 1 mm long.
Distribution (TDWG). Continent. Temperate Asia, Tropical Asia, Australasia, Pacific.
Country /Province /State. Eastern Asia. Ogosawara-shoto. Malesia, Papuasia. New Guinea. Australia. Western Australia, Northern Territory, Queensland, New South Wales. Southwestern Pacific, North-central Pacific. New Caledonia. Hawaii.

Kimberley. Darwin \& Gulf, Victoria R \& Barkly Tableland. North, Central, South East, Inland. Coast, Tablelands, Western Slopes, Western Plains.

Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online (as Setaria), W.D.Clayton \& K.Harman, GrassBase (2008) and online.

TYPE from Cuba. Basionym or Replaced Name: Panicum distantiflorum A. Rich., Hist. Fis. Cuba, Bot. 11: 302 (1850)
. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: R. de la Sagra s.n., no date, Cuba: in montosis ins. Cubae (P; IT: US-80652 (fragm. ex P)).

Recent Synonyms: Setaria distantiflora (A. Rich.) Pilger, Engl. \& Prantl, Nat. Pflanzenfam. Aufl. 2, xiv e. 72 (1940).

Illustrations (Books): A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (as Panicum).
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect or geniculately ascending, slender, 30-80 cm long, wiry. Culm-nodes glabrous. Lateral branches sparse. Leaf-sheaths smooth or scaberulous. Ligule a fringe of hairs. Leaf-blades flat or involute, $5-15 \mathrm{~cm}$ long, $1-3 \mathrm{~mm}$ wide. Leaf-blade surface puberulous, hairy adaxially.

Inflorescence. Inflorescence composed of racemes. Racemes borne along a central axis, appressed, paucilateral, bearing few fertile spikelets, bearing 1-3 fertile spikelets on each. Central inflorescence axis $2-8 \mathrm{~cm}$ long, tip with blunt extension. Rhachis subterete, terminating in a barren extension, extension bristle-like, extension 1 mm long. Spikelet packing abaxial, irregular. Spikelets solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate or elliptic, dorsally compressed, 1.5 mm long, falling entire.

Glumes. Glumes shorter than spikelet, thinner than fertile lemma. Lower glume ovate, 0.5 length of spikelet, membranous, without keels, 3-5 -veined. Lower glume apex acute. Upper glume elliptic, 0.66 length of spikelet, membranous, without keels, 5-7 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5-7 -veined, obtuse or acute. Palea of lower sterile floret 1 length of lemma. Fertile lemma elliptic, 1.5 mm long, indurate, without keel. Lemma surface rugulose. Lemma margins involute. Lemma apex acute. Palea reflexed at apex, indurate. Palea surface rugose.

Distribution (TDWG). Continent. South America.
Country /Province/State. Caribbean. Cuba, Venezuelan and Netherlands Antilles.

Paspalidium elegantulum (Mez) Henrard. Blumea, iii. 435 (1940).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, W.D.Clayton \& N.Snow, Key to Pacific Grasses (2010).

TYPE from New Caledonia. Basionym or Replaced Name: Panicum elegantulum Mez, Notizbl. Bot. Gart. Berlin-Dahlem 7: 59 (1917). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: ST: Balansa 893, Novo-Caledonia, in silvis prope Bourail ST: Balansa 3586, Novo-Caledonia, ad fluvii Dotio ripas.

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. elegans, elegant; -ulus, diminutive. Of attractive appearance.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Perennial. Culms geniculately ascending, 25-40 cm long. Ligule a fringe of hairs. Leaf-blades filiform, involute, $5-20 \mathrm{~cm}$ long, $1-1.5 \mathrm{~mm}$ wide.

Inflorescence. Inflorescence composed of racemes. Racemes 5-10, borne along a central axis, unilateral, $0.5-3 \mathrm{~cm}$ long. Central inflorescence axis 6-17 cm long, tip filiform. Rhachis angular, terminating in a barren extension, extension bristle-like. Spikelet packing abaxial, 2 -rowed. Spikelets solitary or in pairs. Fertile spikelets pedicelled. Pedicels present, linear, terete.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, 1.6-1.8 mm long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume oblong, 0.5 mm long, 0.33 length of spikelet, hyaline or membranous, without keels, 0 -veined. Lower glume lateral veins absent. Lower glume apex truncate. Upper glume ovate, $1.6-1.8 \mathrm{~mm}$ long, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, $1.6-1.8 \mathrm{~mm}$ long, 1 length of spikelet, membranous, 5 -veined, acute. Fertile lemma elliptic, $1.6-1.8 \mathrm{~mm}$ long, indurate, without keel. Lemma surface granulose, rugulose. Lemma margins involute. Lemma apex acute. Palea reflexed at apex, indurate, 2-keeled.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Pacific.
Country /Province /State. Southwestern Pacific. New Caledonia.

Images: D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002);
Derivation (Clifford \& Bostock 2007): Gk. gausos, bent. The spikelets are curved.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Perennial. Cataphylls evident. Rhizomes short. Basal innovations extravaginal. Culms erect or geniculately ascending, $35-70 \mathrm{~cm}$ long, wiry, 2-4 -noded, without nodal roots or rooting from lower nodes. Culm-nodes glabrous. Lateral branches lacking or sparse. Leaf-sheaths keeled, outer margin hairy. Ligule a ciliate membrane, 0.5 mm long. Leaf-blades flat or conduplicate, $7-15 \mathrm{~cm}$ long, 2-3 mm wide, stiff. Leaf-blade surface scaberulous, rough adaxially. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes 4-5, borne along a central axis, distant, appressed, unilateral, $0.5-1.5 \mathrm{~cm}$ long. Central inflorescence axis $10-20 \mathrm{~cm}$ long, tip filiform. Rhachis angular, scabrous on margins, terminating in a sterile spikelet or barren extension, extension bristle-like. Spikelet packing abaxial, crowded, 2 -rowed. Spikelets deflexed, solitary. Fertile spikelets pedicelled. Pedicels present, 0.5 mm long, scabrous, tip discoid.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong or ovate, dorsally compressed, gibbous, acute, $2.5-2.75 \mathrm{~mm}$ long, $1.5-2 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes shorter than spikelet, thinner than fertile lemma, gaping. Lower glume orbicular, clasping, gibbous, 0.5 length of spikelet, membranous, without keels, $3-5$-veined. Lower glume apex obtuse. Upper glume elliptic, 0.8 length of spikelet, membranous, without keels, $7-9$-veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, with palea or without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, sulcate, acute. Palea of lower sterile floret $0-0.5$ length of lemma. Fertile lemma ovate, $2.5-2.75 \mathrm{~mm}$ long, indurate, yellow, without keel. Lemma surface rugose, with distinct germination flap. Lemma margins involute. Lemma apex apiculate. Palea reflexed at apex, indurate, 2-keeled. Palea surface rugose.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Australasia.
Country /Province/State. Australia. Queensland, New South Wales.
North, Central, South East. Coast.

(Pl. 24).
Derivation (Clifford \& Bostock 2007): L. gemini, twins; -ata, possessing. Spikelets paired.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Perennial, mat forming. Rhizomes elongated, spongy. Culms prostrate, $10-60 \mathrm{~cm}$ long, spongy, rooting from lower nodes. Ligule a fringe of hairs. Leaf-blades flat or conduplicate, $5-35 \mathrm{~cm}$ long, $2-13 \mathrm{~mm}$ wide. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes borne along a central axis, appressed, unilateral, $0.5-4 \mathrm{~cm}$ long. Central inflorescence axis $5-30 \mathrm{~cm}$ long, flattened. Rhachis narrowly winged, with sharp-edged midrib, angular, $0.5-1 \mathrm{~mm}$ wide, terminating in a barren extension, extension inconspicuous. Spikelet packing abaxial, crowded, regular, 2 -rowed. Spikelets appressed, solitary or in pairs. Fertile spikelets pedicelled, 1-2 in the cluster. Pedicels present, oblong.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, 1.6-2.6 mm long, falling entire.

Glumes. Glumes dissimilar, shorter than spikelet, thinner than fertile lemma. Lower glume orbicular, 0.5 mm long, $0.3-0.5$ length of upper glume, $0.2-0.4$ length of spikelet, membranous, pallid, without keels, $0-5$-veined. Lower glume apex truncate. Upper glume elliptic, $0.6-0.8$ length of spikelet, membranous, without keels, 5 -veined. Upper glume apex obtuse or acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5 -veined, obtuse or acute. Fertile lemma elliptic, 1.2-2.4 mm long, indurate, dark brown, shiny, without keel, 5 -veined, more than 3-veined. Lemma surface granulose. Lemma margins involute. Lemma apex obtuse or acute. Palea reflexed at apex, indurate.

Flower and Fruit. $n=9$ ( 2 refd TROPICOS $)$.
Distribution (TDWG). Continent. Africa, Temperate Asia, Tropical Asia, North America, South America.

Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), D.Sharp, D. \& B.K.Simon, AusGrass (2002).

TYPE from Australia. Basionym or Replaced Name: Panicum globoideum Domin, Repert. Spec. Nov. Regni Veg. 10: 119 (1911). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: LT: Wuth. s.n., Queensland: Springsure (K). LT designated by ?; cited by Webster, Sida 16: 443 (1995).

Illustrations (Books): S.W.L.Jacobs, R.D.B.Whalley \& D.J.B.Wheeler,, Grasses of New South Wales, 4th edn (2008) (324), T.D.Stanley \& E.Ross, Flora of South East Queensland, Gramineae (1989) (211, Fig. 33), D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002).

Images: D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002);,
Derivation (Clifford \& Bostock 2007): L. globus, sphere; Gk. -oideum, resemblance. Spikelets globose.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Perennial, caespitose, clumped densely. Rootstock evident. Culms erect, $30-70 \mathrm{~cm}$ long, 3-4 -noded. Culm-internodes channelled. Culm-nodes glabrous. Lateral branches sparse, arising from mid culm or upper culm. Leaf-sheaths keeled, striately veined, smooth or scaberulous. Ligule a ciliolate membrane, 0.75 mm long, truncate. Leaf-blades $10-20 \mathrm{~cm}$ long, 3-6 mm wide. Leafblade surface scaberulous, rough adaxially. Leaf-blade apex attenuate.

Inflorescence. Inflorescence composed of racemes. Racemes 5-10, borne along a central axis, appressed, flexuous, unilateral, $2-5.5 \mathrm{~cm}$ long, bearing few fertile spikelets, simple or secondarily branched. Central inflorescence axis $7-18 \mathrm{~cm}$ long, tip filiform. Rhachis angular, scabrous on margins, terminating in a barren extension, extension bristle-like. Spikelet packing abaxial, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, 0.5 mm long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets orbicular, globose, dorsally compressed, gibbous, $3.5-4.5 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, clasping, 0.33-0.5 length of spikelet, membranous, without keels, 7 -veined. Lower glume apex acute. Upper glume orbicular, 1 length of spikelet, membranous, without keels, $9-13$-veined. Upper glume lateral veins with cross-veins. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, orbicular, 1 length of spikelet, membranous, $9-11$-veined, with cross-veins, sulcate, acute. Palea of lower
sterile floret 1 length of lemma. Fertile lemma ovate, $3.5-4.5 \mathrm{~mm}$ long, indurate, pallid, without keel. Lemma surface granulose, rough in lines. Lemma margins involute. Lemma apex apiculate. Palea reflexed at apex, indurate, 2-keeled.

Flower and Fruit. Caryopsis with adherent pericarp, orbicular. Embryo 0.66 length of caryopsis.
Distribution (TDWG). Continent. Australasia.
Country /Province /State. Australia. Queensland, New South Wales.
North, Central, South East, Inland. Tablelands, Western Slopes, Western Plains.

Paspalidium gracile (R.Br.) D.K.Hughes. Kew Bull. 1923, 318 (1923).

TYPE from Australia. Basionym or Replaced Name: Panicum gracile R. Br., Prodr. 190 (1810). Illustrations (Books): C.A.Gardner, Flora of Western Australia, Vol 1, Part 1, Gramineae (1952) (247, Pl 73), N.Walsh \& T.Entwistle, Flora of Victoria Vol 2 (1994) (602, Fig 122), S.W.L.Jacobs, R.D.B.Whalley \& D.J.B.Wheeler,, Grasses of New South Wales, 4th edn (2008) (324), T.D.Stanley \& E.Ross, Flora of South East Queensland, Gramineae (1989) (211, Fig. 33), D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002).

Images: D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002);.
Derivation (Clifford \& Bostock 2007): L. slender. Culms or inflorescences slender.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rootstock evident. Basal innovations extravaginal. Culms erect, $10-80 \mathrm{~cm}$ long, wiry, 5 -noded. Culm-internodes smooth or scaberulous, distally glabrous or pubescent. Culm-nodes glabrous or pubescent. Lateral branches ample. Leaf-sheaths keeled, glabrous on surface or pilose, with tubercle-based hairs. Ligule a fringe of hairs, $1-1.25 \mathrm{~mm}$ long. Leafblades convolute, $7-14 \mathrm{~cm}$ long, $2-3.5 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pilose, sparsely hairy, with tubercle-based hairs. Leaf-blade apex attenuate.

Inflorescence. Inflorescence composed of racemes. Racemes 5-10, borne along a central axis, unilateral, $1-2 \mathrm{~cm}$ long, bearing few fertile spikelets. Central inflorescence axis $10-20 \mathrm{~cm}$ long, tip filiform. Rhachis angular, 0.15 mm wide, scabrous on margins, terminating in a barren extension, extension bristlelike, extension $1-2 \mathrm{~mm}$ long. Spikelet packing abaxial, regular, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $0.2-0.5 \mathrm{~mm}$ long, scabrous, tip discoid.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or obovate, dorsally compressed, planoconvex, acute, $2-2.75 \mathrm{~mm}$ long, falling entire. Rhachilla internodes elongated between glumes or elongated below basal sterile floret or elongated between basal sterile florets.

Glumes. Glumes shorter than spikelet, thinner than fertile lemma. Lower glume oblate, clasping, 0.5 length of spikelet, membranous, without keels, 3-5 -veined. Lower glume apex acute. Upper glume orbicular, 0.8 length of spikelet, membranous, without keels, 5-7-veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic or obovate, 1 length of spikelet, membranous, 5 -veined, sulcate, acute. Fertile lemma elliptic or obovate, $2-2.75 \mathrm{~mm}$ long, indurate, without keel, 5 -veined, more than 3 -veined. Lemma surface granulose, rugulose. Lemma margins involute. Lemma apex acute. Palea reflexed at apex, indurate, 2-keeled.

Flower and Fruit. Caryopsis with adherent pericarp, orbicular. Embryo 0.5 length of caryopsis. Hilum punctiform.

Distribution (TDWG). Continent. Europe (*), Australasia.
Region. Northern Europe (*).
Country /Province /State. : GB Aliens (Ryves et al). Australia. Western Australia, Northern Territory, South Australia, Queensland, New South Wales, Victoria.

Eremean. Victoria R \& Barkly Tableland, Central Australia. Southern. North, Central, South East, Inland. Coast, Tablelands, Western Slopes, Western Plains.

Paspalidium grandispiculatum B.K. Simon. Austrobaileya, 1(5): 465 (1983).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), D.Sharp, D. \& B.K.Simon, AusGrass (2002).

TYPE from Australia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Australia: Queensland: 14 km N of Helidon, Peart 1990 (HT: BRI-255048; IT: BRI, CANB, K, L, MO, NSW).

Illustrations (Books): S.W.L.Jacobs, R.D.B.Whalley \& D.J.B.Wheeler,, Grasses of New South Wales, 4th edn (2008) (324), T.D.Stanley \& E.Ross, Flora of South East Queensland, Gramineae (1989) (211, Fig. 33), D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002).

Derivation (Clifford \& Bostock 2007): L. grandis, large; spiculus, small spike; -atum, possessing. Spikelets large.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Perennial. Rhizomes elongated, woody. Culms $80-150 \mathrm{~cm}$ long, woody, 7-9 -noded. Culm-internodes glaucous, distally pruinose or glabrous. Lateral branches sparse. Leaf-sheaths without keel, glabrous on surface. Ligule a fringe of hairs, 1 mm long. Leaf-blades flat or conduplicate, $4-5 \mathrm{~cm}$ long, $2-3 \mathrm{~mm}$ wide. Leaf-blade surface scaberulous.

Inflorescence. Inflorescence composed of racemes. Racemes 5-8, borne along a central axis, unilateral, $0.5-3 \mathrm{~cm}$ long, bearing few fertile spikelets. Central inflorescence axis $8-16 \mathrm{~cm}$ long, puberulous. Rhachis angular, terminating in a barren extension, extension subulate, extension 2-4 mm long. Spikelet packing abaxial. Spikelets subtended by an involucre. Fertile spikelets pedicelled. Involucre composed of bristles. Involucral bristles persistent, 1 in principal whorl, 1 per spikelet, $3-4 \mathrm{~mm}$ long. Pedicels present, oblong, $0.5-1 \mathrm{~mm}$ long, puberulous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, $3.5-4.5 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes shorter than spikelet, thinner than fertile lemma. Lower glume ovate, clasping, 0.5 length of spikelet, scarious, without keels, 5-7 -veined. Lower glume surface asperulous. Lower glume apex obtuse. Upper glume elliptic, 0.75 length of spikelet, membranous, without keels, 7-9 -veined. Upper glume primary vein scaberulous. Upper glume apex obtuse or acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5 -veined, scaberulous, obtuse. Fertile lemma elliptic, 3-4 mm long, indurate, without keel, 5-7 -veined, more than 3-veined. Lemma surface rugulose. Lemma margins involute. Lemma apex acute. Palea reflexed at apex, indurate, 2 -keeled.

Flower and Fruit. Anthers 3, 2.5 mm long. Caryopsis with adherent pericarp, 3 mm long. Embryo 0.2 length of caryopsis.

Distribution (TDWG). Continent. Australasia.
Country /Province /State. Australia. Queensland.
South East.

## Paspalidium johnsonii B.K. Simon. Austrobaileya 8: 212 (2010).

TYPE from Australia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Queensland. Burke District: Amphitheatre, 40 km N of Musselbrook Mining camp, 3 May 1995, R.W.Johnson MRS792 \& M.B.Thomas (holo: BRI; iso: DNA, K ).

Illustrations (Journals): Austrobaileya (8: 208, Fig. 3 (2010)).
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Annual. Culms erect or decumbent, 7-20 cm long, 3-5 noded. Leafsheaths outer margin glabrous. Ligule a fringe of hairs. Leaf-blades involute, $1-4 \mathrm{~cm}$ long, $5-7 \mathrm{~mm}$ wide.

Inflorescence. Inflorescence composed of racemes. Racemes 10-20, single (apparently, when racemes reduced to 1 spikelet) or borne along a central axis, appressed, unilateral, $0.4-0.6 \mathrm{~cm}$ long, bearing few fertile spikelets, bearing $1(-2)$ fertile spikelets on each. Central inflorescence axis $1.5-4 \mathrm{~cm}$ long. Rhachis narrowly winged, angular, terminating in a barren extension, extension subulate, extension $0.7-0.8 \mathrm{~mm}$ long. Spikelet packing abaxial. Spikelets solitary or subtended by an involucre (actually the extension of a

1 -spikelet raceme). Fertile spikelets sessile. Involucre composed of bristles, $0.7-0.8 \mathrm{~mm}$ long. Involucral bristles 1 per spikelet.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, 2.1-2.5 mm long, $0.9-1 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 1.5 mm long, 0.75 length of spikelet, membranous, without keels, 5 -veined. Lower glume apex truncate. Upper glume elliptic, 2.1-2.5 mm long, 1 length of spikelet, membranous, without keels, 7 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5 -veined, acute. Fertile lemma elliptic, 2.1-2.4 mm long, indurate, yellow, without keel. Lemma surface rugose. Lemma margins involute. Lemma apex acute. Palea indurate. Palea surface rugose.

Distribution (TDWG). Continent. Australasia. Country /Province/State. Australia. Queensland.
North.

Paspalidium jubiflorum (Trin.) D.K.Hughes. Kew Bull. 1923, 317. (1923).

Recent Synonyms: Setaria leonis (Ekman) Leon, Contrib. Ocas. Mus. Hist. Nat. Col. de la Salle, Habana, No. 8, 163 (1946).

Illustrations (Books): A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (295, Fig. 286 as Panicum).

Derivation (Clifford \& Bostock 2007): In honor of Joseph Sylvestre Sauget-Barbier, also known as Brother, Frere or Hermano Leon (1871-1955) French-born cleric and Cuban botanist.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rhizomes elongated. Butt sheaths glabrous or pubescent. Culms erect or geniculately ascending, slender, $30-60 \mathrm{~cm}$ long. Culm-nodes pubescent. Lateral branches ample. Leaf-sheaths wider than blade at the collar, glabrous on surface, outer margin hairy. Ligule a fringe of hairs. Collar pubescent. Leaf-blades $5-15 \mathrm{~cm}$ long, $4-7 \mathrm{~mm}$ wide.

Inflorescence. Inflorescence composed of racemes. Racemes borne along a central axis, paucilateral, bearing few fertile spikelets. Central inflorescence axis $2-5 \mathrm{~cm}$ long, tip with blunt extension. Rhachis subterete, terminating in a barren extension, extension bristle-like, extension $0.2-2 \mathrm{~mm}$ long. Spikelet packing abaxial, irregular. Spikelets solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate or elliptic, dorsally compressed, 1.7-2 mm long, falling entire.

Glumes. Glumes shorter than spikelet, thinner than fertile lemma. Lower glume ovate, 0.33-0.5 length of spikelet, membranous, without keels, 3 -veined. Lower glume apex acute. Upper glume elliptic, 0.66 length of spikelet, membranous, without keels, 5-7 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5-7 -veined, obtuse or acute. Fertile lemma elliptic, 1.7-2 mm long, indurate, without keel. Lemma surface rugulose. Lemma margins involute. Lemma apex acute. Palea reflexed at apex, indurate. Palea surface rugose.

Distribution (TDWG). Continent. South America.
Country /Province/State. Caribbean. Cuba, Dominican Republic, Haiti.

Paspalidium obtusifolium (Delile) Simpson. Ministr. Agric. Egypt, Techn. \& Sc. Service, Bull. No. 93:10 (1930).

Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Egypt. Basionym or Replaced Name: Panicum obtusifolium Delile, Descr. Egypte, Hist. Nat. 150, t. 5, f. 1 (1812). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Egypt (Montpellier; IT: P-Desf.).

Illustrations (Books): L.K.A. Chippindall, Grasses and Pastures of South Africa (1955) (367, Fig 315), G.E.Gibbs Russell el al, Grasses of Southern Africa (1990) (244, Fig 154), J.Th.Henrard, Monograph of the genus Digitaria (1950) (as Panicum).

Derivation (Clifford \& Bostock 2007): L. obtusus, blunt; folium, leaf. Apices of leaf-blades rounded. Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.

Habit, Vegetative Morphology. Perennial, mat forming. Rhizomes elongated, spongy. Culms prostrate, $30-60 \mathrm{~cm}$ long, spongy, rooting from lower nodes. Ligule a fringe of hairs. Leaf-blades flat or conduplicate, $3-20 \mathrm{~cm}$ long, $4-12 \mathrm{~mm}$ wide. Leaf-blade apex obtuse or abruptly acute.

Inflorescence. Inflorescence composed of racemes. Racemes borne along a central axis, unilateral, 1-3 cm long. Central inflorescence axis $10-30 \mathrm{~cm}$ long, flattened. Rhachis broadly winged, with sharp-edged midrib, $1-3 \mathrm{~mm}$ wide, terminating in a barren extension, extension flattened. Spikelet packing abaxial, crowded, regular, 2 -rowed. Spikelets appressed, solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, 3-4 mm long, falling entire.

Glumes. Glumes dissimilar, shorter than spikelet, thinner than fertile lemma. Lower glume orbicular, $0.1-0.25$ length of spikelet, membranous, without keels, $0-5$-veined. Lower glume apex truncate. Upper glume elliptic, 0.33-0.5 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex obtuse or acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5 -veined, obtuse or acute. Fertile lemma elliptic, 3-4 mm long, indurate, without keel. Lemma surface granulose. Lemma margins involute. Palea reflexed at apex, indurate.

Flower and Fruit. $n=18$ ( 3 refs TROPICOS).
Distribution (TDWG). Continent. Africa.
Country /Province/State. Northern Africa, West Tropical Africa, East Tropical Africa, South Tropical Africa, Southern Africa. Algeria, Egypt, Morocco, Tunisia. Kenya, Tanzania. Malawi, Mozambique, Zambia. Namibia, Botswana, Limpopo, Kwazulu-Natal.

Paspalidium ophiticola (A. Hitchc. \& E. Ekman) G. Davidse \& R.W. Pohl. Novon, 2(2): 106: (1992).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online.
TYPE from Cuba. Basionym or Replaced Name: Panicum ophiticola Hitchc. \& Ekman, Man. Grasses W. Ind. 293, f. 282 (1936). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: E.L. Ekman 12712, 2 Jan 1921, Cuba: Pinar del Río: Loma Cajálbana (US-1387464).

Illustrations (Books): A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (293, Fig. 282 as Panicum).

Derivation (Clifford \& Bostock 2007): Gk. ophis, serpent; L. -cola, dweller. Growing on serpentinite rocks.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Perennial, caespitose, clumped densely. Culms erect or geniculately ascending, slender, $30-50 \mathrm{~cm}$ long. Culm-nodes glabrous. Leaf-sheath oral hairs ciliate. Ligule a fringe of hairs. Leaf-blades flat or conduplicate, 5-10 cm long, $1-2 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pilose, hairy adaxially.

Inflorescence. Inflorescence composed of racemes, terminal and axillary. Racemes borne along a central axis, appressed, paucilateral, bearing few fertile spikelets. Central inflorescence axis $2-7 \mathrm{~cm}$ long, tip with blunt extension. Rhachis subterete, terminating in a barren extension, extension bristle-like, extension $0.5-1 \mathrm{~mm}$ long. Spikelet packing abaxial, irregular. Spikelets solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate or elliptic, dorsally compressed, 2-2.8 mm long, falling entire.

Glumes. Glumes shorter than spikelet, thinner than fertile lemma. Lower glume ovate, $0.33-0.5$ length of spikelet, membranous, without keels, 3 -veined. Lower glume apex acute. Upper glume elliptic, 0.75 length of spikelet, membranous, without keels, 5-7-veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5-7 -veined, obtuse or acute. Fertile lemma elliptic, 2-2.8 mm long, indurate, without keel. Lemma surface rugulose. Lemma margins involute. Lemma apex acute. Palea reflexed at apex, indurate. Palea surface rugose.

Distribution (TDWG). Continent. South America.

## Country /Province /State. Caribbean. Cuba.

Paspalidium paludivagum (Hitchcock \& Chase) L. Parodi. Gramin. Bonar. ed. 3, 85, 89 (1939).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online.
TYPE from USA. Basionym or Replaced Name: Panicum paludivagum Hitchc. \& Chase, Contr. U.S. Natl. Herb. 15: 32-33, f. 13 (1910)

T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: G.V. Nash 746, 16-31 May 1894, USA: Florida: Lake Co.: near Eustis (US-207685).

Illustrations (Books): E.G.Nicora, Los Generos de Gramineas de America Austral (1987) (462, Fig. 164), L.B. Smith, D.C. Wasshausen, R.M. Klein Flora Illustrada Catarinensis Gramineas (1981-1982) (1074, Fig. 208), A.Burkat, Flora Ilustrada de Entre Rios (Argentina), Pt II, Gramineas (1969) (367, Fig. 153), A.L.Cabrera, Flora de la Provincia de Buenos Aires, IV Pt 2 Gramineas (1970) (539, Fig. 142), B.Rosengurtt, Gramineas UruguayasI (1970) (346, Fig. 149).

Derivation (Clifford \& Bostock 2007): L. palus, swamp; vagum, wandering. Runners much branched and often submerged.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Perennial. Rhizomes elongated, spongy. Culms prostrate, 100-180 cm long, $4-5 \mathrm{~mm}$ diam., spongy, rooting from lower nodes. Culm-internodes $3-16 \mathrm{~cm}$ long. Leaf-sheaths longer than adjacent culm internode. Ligule a fringe of hairs. Leaf-blades flat or conduplicate, $5-35 \mathrm{~cm}$ long, $2-13 \mathrm{~mm}$ wide.

Inflorescence. Inflorescence composed of racemes. Racemes 5-17, borne along a central axis, appressed, unilateral, $1-3 \mathrm{~cm}$ long. Central inflorescence axis $11-30 \mathrm{~cm}$ long, flattened. Rhachis narrowly winged, with sharp-edged midrib, angular, terminating in a barren extension, extension inconspicuous. Spikelet packing abaxial, crowded, regular, 2 -rowed. Spikelets appressed, solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or ovate, dorsally compressed, $2.6-3.2 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes dissimilar, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, $0.6-$ 0.8 mm long, 0.5 length of upper glume, 0.25 length of spikelet, membranous, pallid, without keels. Lower glume apex erose, truncate. Upper glume ovate, $1.2-1.6 \mathrm{~mm}$ long, 0.5 length of spikelet, membranous, without keels, 3 -veined. Upper glume apex erose, obtuse.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret lanceolate, 1 length of spikelet, membranous, 3 -veined, acute. Fertile lemma lanceolate, $2.6-3.2 \mathrm{~mm}$ long, indurate, yellow, without keel. Lemma surface rugulose. Lemma margins involute. Palea reflexed at apex, indurate.

Distribution (TDWG). Continent. North America, South America.
Country /Province/State. Mexico. Southwest Mexico. Western South America, Brazil, Southern South America. Brazil West Central, Brazil Southeast, Brazil South. Argentina Northeast.

Mato Grosso, Minas Gerais, Rio de Janeiro, Espirito Santo, Catarina, Rio Grande do Sul. Mato Grosso. Santa Catarina. Buenos Aires, Entre Rios. Jalisco, Michoacan, Nayarit.

Paspalidium pradanum (Leon) G. Davidse \& R.W. Pohl. Novon, 2(2): 106: (1992).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online (as Setaria), W.D.Clayton \& K.Harman, GrassBase (2008) and online.

TYPE from Cuba. Basionym or Replaced Name: Panicum pradanum León, Man. Grasses W. Ind. 294, f. 284 (1936)
. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Bro. León 11710, 17 Jul-4 Aug 1924, Cuba: Oriente: Mesa de Prada, lower Jauco Valley (US-1258962).

Recent Synonyms: Setaria pradana (Leon) Leon, Contrib. Ocas. Mus. Hist. Nat. Col. de la Salle, Habana, No. 8, 164 (1946).

Illustrations (Books): A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (294, Fig. 284 as Panicum).

Derivation (Clifford \& Bostock 2007): L. -ana, indicating connection. In honor of Enrique who collected in Prada, Cuba.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms geniculately ascending, slender, 50-90 cm long, wiry. Leaf-sheath oral hairs ciliate. Ligule a fringe of hairs. Leaf-blades curled or flexuous, involute, $15-20 \mathrm{~cm}$ long, $1-2 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pubescent, sparsely hairy, hairy adaxially. Leaf-blade margins scaberulous.

Inflorescence. Inflorescence composed of racemes. Racemes borne along a central axis, distant, appressed, paucilateral, $0.5-2 \mathrm{~cm}$ long, bearing few fertile spikelets. Central inflorescence axis $15-35 \mathrm{~cm}$ long, tip with blunt extension. Rhachis subterete, terminating in a barren extension, extension bristle-like, extension $0.5-2 \mathrm{~mm}$ long. Spikelet packing abaxial, irregular. Spikelets solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate or elliptic, dorsally compressed, 1.8-2 mm long, falling entire.

Glumes. Glumes shorter than spikelet, thinner than fertile lemma. Lower glume ovate, 0.4 length of spikelet, membranous, without keels, 3 -veined. Lower glume apex acute. Upper glume elliptic, 0.66 length of spikelet, membranous, without keels, 5-7 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5 -veined, obtuse or acute. Fertile lemma elliptic, 1.8 mm long, indurate, without keel. Lemma surface rugulose. Lemma margins involute. Lemma apex acute. Palea reflexed at apex, indurate. Palea surface rugose.

Distribution (TDWG). Continent. South America.
Country/Province/State. Caribbean. Cuba, Dominican Republic, Haiti, Puerto Rico.

## Paspalidium punctatum (Burm.) A.Camus. Lecomte, Fl. Gen. Indo-Chine, vii. 419 (1922).

Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), S-L Chen et al, Flora of China 22 (Poaceae) (2006), J.F.Veldkamp, Poaceae ms (Flora Malesiana) (as Setaria), T.G.Tutin et al, Flora Europaea 5 (1980), T.Koyama, Grasses of Japan and its neighboring regions (1987).

TYPE from India. Basionym or Replaced Name: Panicum punctatum Burm. f., Fl. Indica 26 (1768)
. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: India:, Plukenet s.n. (LT: BM).

Illustrations (Books): T.Koyama, Grasses of Japan and its neighbouring regions (1987) (346, Fig 134), C-C Hsu, Flora of Taiwan, Vol 5 (1978) (574), C-C Hsu,Taiwan Grasses (1975), K.M.Matthew, Illustrations on the Flora of Tamilnadu Carnatic (1982) (Pl. 906 \& 907), H.B.Gilliland, Grasses of Malaya (1971) (174, Fig 35), S-L Chen et al, Flora of China, Illustrations, Poaceae (2007) (Fig. 747), E.Hafliger \& E.Schultz, Grass Weeds, CIBA-GEIGY (1:93(1980)).

Images: H.B.Gilliland et al., Flora of Malaya Vol. 3 Grasses (1971);.
Derivation (Clifford \& Bostock 2007): L. pungo, prick; -ata, possessing. Glumes spotted with color.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Perennial, mat forming. Rhizomes elongated, spongy. Culms prostrate, $30-200 \mathrm{~cm}$ long, spongy, rooting from lower nodes. Ligule a fringe of hairs. Leaf-blades flat or conduplicate, $5-25 \mathrm{~cm}$ long, $3-8 \mathrm{~mm}$ wide. Leaf-blade apex abruptly acute or acute or acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes 14-24, borne along a central axis, unilateral, $1-6 \mathrm{~cm}$ long. Central inflorescence axis $10-30 \mathrm{~cm}$ long, flattened. Rhachis narrowly winged, angular, $0.5-1.5 \mathrm{~mm}$ wide, terminating in a barren extension, extension subulate. Spikelet packing abaxial, crowded, regular, 2 -rowed. Spikelets appressed, solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, $2-3 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes dissimilar, shorter than spikelet, thinner than fertile lemma. Lower glume orbicular, 0.25 length of spikelet, membranous, without keels, $0-5$-veined. Lower glume apex truncate. Upper glume elliptic, $0.1-0.75$ length of spikelet, membranous, without keels, 5 -veined. Upper glume apex obtuse or acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, $0.8-1$ length of spikelet, membranous, 5 -veined, distinctly veined or without lateral veins, obtuse or acute. Fertile lemma elliptic, $2-3 \mathrm{~mm}$ long, indurate, without keel. Lemma surface rugulose. Lemma margins involute. Palea reflexed at apex, indurate.

Flower and Fruit. $n=18$ ( 2 refs TROPICOS). $2 n=36$ ( 1 ref TROPICOS).
Distribution (TDWG). Continent. Africa, Temperate Asia, Tropical Asia.
Country /Province /State. East Tropical Africa. Kenya, Tanzania. China, Eastern Asia. Hainan, China Southeast. Taiwan. Indian Subcontinent, Indo-China, Malesia, Papuasia. Bangladesh, India, Pakistan, Sri Lanka. Cambodia, Laos, Myanmar, Thailand, Vietnam. Borneo, Java, Malaya, Philippines, Sumatra. New Guinea.

## Paspalidium rarum (R.Br.) D.K.Hughes. Kew Bull. 1923, 318 (1923).

Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), D.Sharp, D. \& B.K.Simon, AusGrass (2002).

TYPE from Australia. Basionym or Replaced Name: Panicum rarum R. Br., Prodr. 189 (1810). $\mathrm{T}:<$ Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: R. Brown 6100, 1803, Australia (BM; IT: US-80953 (fragm.)).

Illustrations (Books): J.R.Wheeler et al, Flora of the Kimberley Region (1992) (1201, Fig 340), S.W.L.Jacobs, R.D.B.Whalley \& D.J.B.Wheeler,, Grasses of New South Wales, 4th edn (2008) (325), D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002).

Images: D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002);.
Derivation (Clifford \& Bostock 2007): L. far apart. Spikelets far apart in panicle.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Annual, caespitose. Culms geniculately ascending or decumbent, 15-$22(-37) \mathrm{cm}$ long, $3-5$-noded, without nodal roots or rooting from lower nodes. Ligule a fringe of hairs. Leaf-blades flat or conduplicate, $3-8 \mathrm{~cm}$ long, $1-3 \mathrm{~mm}$ wide.

Inflorescence. Inflorescence composed of racemes. Racemes 10-20, single (apparently, when racemes reduced to 1 spikelet) or borne along a central axis, unilateral, $0.3-0.9 \mathrm{~cm}$ long, bearing few fertile spikelets, bearing 1-2(-4) fertile spikelets on each. Central inflorescence axis $5-10 \mathrm{~cm}$ long. Rhachis narrowly winged, angular, terminating in a barren extension, extension subulate, extension 2-4 mm long. Spikelet packing abaxial. Spikelets solitary or subtended by an involucre (actually the extension of a 1 -spikelet raceme). Fertile spikelets sessile. Involucre composed of bristles, $2-3 \mathrm{~mm}$ long. Involucral bristles 1 per spikelet.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, obtuse or acute, 3-3.5 mm long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.5-0.6$ length of spikelet, membranous, without keels, 5-7 -veined. Lower glume apex acute. Upper glume elliptic, 1 length of spikelet, membranous, without keels, $7-9$-veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5-7 -veined, acute. Fertile lemma elliptic, 3-3.5 mm long, indurate, without keel. Lemma surface rugose. Lemma margins involute. Lemma apex acute. Palea reflexed at apex, with a basal protruberance, indurate, 2-keeled. Palea surface rugose.

Distribution (TDWG). Continent. Australasia.
Country /Province /State. Australia. Western Australia, Northern Territory, Queensland, New South Wales.

Kimberley, Eremean. Darwin \& Gulf, Victoria R \& Barkly Tableland, Central Australia. North, Central, South East, Inland. Western Plains.

TYPE from Australia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Latz 4847, Australia (NT).

Illustrations (Books): J.P.Jessop, G.R.M. Dashorst \& F.M.James, Grasses of South Australia (2006) (484, Fig 418 as Setaria reflexa).

Images: D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002);
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Annual. Culms erect, $20-55 \mathrm{~cm}$ long, $2-5$-noded. Culm-nodes glabrous. Leaf-sheaths keeled, smooth, glabrous on surface, outer margin hairy. Ligule an eciliate membrane, $0.6-0.9 \mathrm{~mm}$ long, truncate. Collar glabrous. Leaf-blades $8-26 \mathrm{~cm}$ long, $2-4.5 \mathrm{~mm}$ wide. Leafblade surface smooth, glabrous. Leaf-blade margins smooth, glabrous. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes $3-10$, borne along a central axis, deflexed, unilateral, 2-6 cm long, bearing 8-20 fertile spikelets on each. Central inflorescence axis 10-18 cm long, tip filiform. Rhachis angular, $0.5-0.65 \mathrm{~mm}$ wide, smooth on surface or scabrous on surface, scabrous on margins, terminating in a barren extension, extension bristle-like, extension 2-4 mm long. Spikelet packing abaxial, lax, irregular. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $0.3-0.6 \mathrm{~mm}$ long, smooth or scaberulous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, 2.6-3.3 mm long, $1-1.1 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, clasping, $1.8-3.2 \mathrm{~mm}$ long, 0.66 length of spikelet, membranous, without keels, 3 -veined. Lower glume margins ciliolate. Lower glume apex obtuse or acute. Upper glume elliptic, $2.6-3.3 \mathrm{~mm}$ long, 1 length of spikelet, membranous, without keels, $9-11$-veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, $2.6-3.3 \mathrm{~mm}$ long, 1 length of spikelet, membranous, 7 -veined, distinctly veined, with veins transversely connected at apex, acute. Fertile lemma elliptic, $2.5-3.2 \mathrm{~mm}$ long, indurate, without keel. Lemma lateral veins obscure. Lemma surface rugulose. Lemma margins involute. Lemma apex obtuse or acute, mucronate. Palea reflexed at apex, indurate, 2-keeled. Palea surface rugose.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Australasia.
Country /Province /State. Australia. Western Australia, Northern Territory, South Australia.
Kimberley, Eremean. Darwin \& Gulf, Victoria R \& Barkly Tableland, Central Australia. NW \& Lake Eyre, Southern.

Paspalidium retiglume (Domin) D.K.Hughes. Kew Bull. 1923, 317 (1923).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), D.Sharp, D. \& B.K.Simon, AusGrass (2002).

TYPE from Australia. Basionym or Replaced Name: Panicum retiglume Domin, Repert. Spec. Nov. Regni Veg. 10: 119 (1911). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: F. Mueller s.n., Upper Victoria river, Australia (MEL; IT: K).

Illustrations: None found.
Images: D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002);
Derivation (Clifford \& Bostock 2007): retis, net; gluma, husk. Upper glume and lower lemma with reticulate venation.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Annual. Culms erect, 10-50 cm long, 2-3 -noded. Culm-nodes glabrous. Leaf-sheaths glabrous on surface. Ligule a fringe of hairs, $0.7-1 \mathrm{~mm}$ long. Leaf-blades flat or involute, $4-10 \mathrm{~cm}$ long, $3-5 \mathrm{~mm}$ wide. Leaf-blade surface scabrous, glabrous.

Inflorescence. Inflorescence composed of racemes. Racemes borne along a central axis, appressed, unilateral, $1.5-3 \mathrm{~cm}$ long, bearing $7-17$ fertile spikelets on each. Central inflorescence axis $6.5-18 \mathrm{~cm}$ long,
tip filiform. Rhachis narrowly winged, angular, scabrous on margins, terminating in a barren extension, extension bristle-like, extension 1.7-2.4 mm long. Spikelet packing abaxial, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $0.3-0.5 \mathrm{~mm}$ long, scabrous, tip discoid.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or ovate, dorsally compressed, plano-convex, $2.7-3.1 \mathrm{~mm}$ long, $1.4-1.6 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes shorter than spikelet, thinner than fertile lemma. Lower glume oblong or ovate, $0.8-$ 1.1 mm long, 0.33 length of spikelet, membranous, without keels, 5 -veined. Lower glume lateral veins prominent, transversely connected at apex. Lower glume apex truncate. Upper glume ovate, $2.5-2.9 \mathrm{~mm}$ long, 0.9 length of adjacent fertile lemma, 1 length of spikelet, membranous, without keels, 11-15-veined. Upper glume lateral veins with cross-veins. Upper glume apex acute or acuminate.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic or ovate, $2.7-3.1 \mathrm{~mm}$ long, 1 length of spikelet, membranous, 11 -veined, with cross-veins, acute or acuminate. Fertile lemma ovate, $2.6-3.1 \mathrm{~mm}$ long, indurate, without keel. Lemma surface rugose. Lemma margins involute. Lemma apex acute or acuminate. Palea reflexed at apex, indurate, 2-keeled. Palea surface rugose.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Australasia.
Country /Province /State. Australia. Western Australia, Northern Territory, Queensland.
Kimberley. Victoria R \& Barkly Tableland. North.

Paspalidium scabrifolium S. T. Blake. Proc. Roy. Soc. Queensl. 84: 69 (1973).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), D.Sharp, D. \& B.K.Simon, AusGrass (2002).

TYPE from Australia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: S.T. Blake 19983, Queensland: Prope Wowan, Australia (BRI; IT: L).

Illustrations: None found.
Images: D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002);
Derivation (Clifford \& Bostock 2007): L. scaber, rough; folium, leaf. Leaf-blades rough.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Perennial, caespitose. Basal innovations intravaginal. Culms erect, $50-100 \mathrm{~cm}$ long, 3-7 -noded. Culm-internodes elliptical in section. Lateral branches sparse. Leaf-sheaths longer than adjacent culm internode, keeled, pilose, with tubercle-based hairs, outer margin hairy. Ligule a ciliate membrane, $0.7-1.5 \mathrm{~mm}$ long. Collar pubescent or pilose. Leaf-blades linear or lanceolate, $8-30 \mathrm{~cm}$ long, $4-8 \mathrm{~mm}$ wide. Leaf-blade surface scabrous, rough on both sides, glabrous, hairless except near base. Leaf-blade margins scabrous. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes 10-20, borne along a central axis, flexuous, unilateral, $1-3 \mathrm{~cm}$ long. Central inflorescence axis $10-30 \mathrm{~cm}$ long. Rhachis angular, $0.35-0.6 \mathrm{~mm}$ wide, terminating in a barren extension, extension subulate, extension $1-2 \mathrm{~mm}$ long. Spikelet packing abaxial, regular, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, reduced to a stump, $0.2-0.4 \mathrm{~mm}$ long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, laterally compressed, gibbous, acuminate, $1.9-2.3 \mathrm{~mm}$ long, $1.1-1.45 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes similar, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, $0.2-0.5$ length of spikelet, membranous, without keels, 3 -veined. Lower glume primary vein extending to apex. Lower glume apex acuminate. Upper glume ovate, gibbous, 0.8-0.9 length of spikelet, cartilaginous, without keels, 7 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret ovate, 1 length of spikelet, cartilaginous, 5 -veined, sulcate, obtuse. Palea of lower sterile floret $0.25-0.9 \mathrm{~mm}$ long. Fertile lemma elliptic, laterally compressed, gibbous, $1.9-2.3 \mathrm{~mm}$ long, indurate, without keel. Lemma surface rugulose. Lemma margins involute. Lemma apex acute. Palea reflexed at apex, indurate.

Flower and Fruit. Anthers 3.

Distribution (TDWG). Continent. Australasia. Country /Province/State. Australia. Queensland. North, Central.

Paspalidium spartellum S. T. Blake. Proc. Roy. Soc. Queensl. 1xii. 97 (1952).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), D.Sharp, D. \& B.K.Simon, AusGrass (2002).

TYPE from Australia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Australia: Queensland, S.T. Blake 9939 (HT: BRI).

Illustrations: None found.
Images: D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002);,
Derivation (Clifford \& Bostock 2007): Gk. spartos, broom; L. -ellum, diminutive. Resembling Spartium junceum on account of its wiry culms.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, 50 cm long, wiry, 5-8 -noded. Culm-internodes smooth, distally glabrous. Lateral branches ample. Leaf-sheaths mostly shorter than adjacent culm internode, without keel, striately veined, smooth, glabrous on surface. Ligule a fringe of hairs, 0.15 mm long. Leaf-blades spreading or reflexed, involute, $2-6 \mathrm{~cm}$ long, $0.5-1 \mathrm{~mm}$ wide, stiff. Leafblade surface scabrous, rough on both sides, glabrous. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes 4-6, borne along a central axis, distant, appressed, unilateral, 0.5 cm long, bearing few fertile spikelets, bearing 1-2 fertile spikelets on each. Central inflorescence axis $1.5-2.5 \mathrm{~cm}$ long. Rhachis angular, 0.25 mm wide, scabrous on margins, terminating in a barren extension, extension subulate, extension $0.5-1.5 \mathrm{~mm}$ long. Spikelet packing abaxial, regular, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, reduced to a stump, 0.40.6 mm long, scabrous, tip discoid.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, laterally compressed, gibbous, acute, 2.9-3 mm long, $1.1-1.2 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes similar, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, 0.5 length of spikelet, membranous, without keels, 3 -veined. Lower glume primary vein extending to apex. Lower glume lateral veins prominent, convergent at apex. Lower glume apex acute. Upper glume ovate, gibbous, 0.75 length of spikelet, cartilaginous, without keels, 7 -veined. Upper glume lateral veins prominent. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret ovate, 1 length of spikelet, cartilaginous, 7 -veined, acute. Fertile lemma elliptic, laterally compressed, gibbous, 2.9-3 mm long, indurate, without keel. Lemma surface rugulose. Lemma margins involute. Lemma apex acute. Palea reflexed at apex, indurate.

Flower and Fruit. Anthers 3.
Distribution (TDWG). Continent. Australasia.
Country /Province /State. Australia. Queensland.
Central, Inland.
Paspalidium subtransiens (A. Hitchc. \& E. Ekman) G. Davidse \& R.W. Pohl. Novon, 2(2): 106: (1992).

Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online.
TYPE from Cuba. Basionym or Replaced Name: Setaria subtransiens Hitchc. \& Ekman, Man. Grasses W. Ind. 351, f. 323 (1936)
. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: E.L. Ekman 16828, 27 Jun 1923, Cuba: Santa Clara: in thickets on serpentine, Cuabales, Motembo, Las Villas (US-1161839; IT: MO(as \#1043)).

Illustrations (Books): A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (352, Fig. 323as Setaria).

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.

Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, slender, 60-100 cm long. Culmnodes glabrous or pubescent. Leaf-sheaths keeled, glabrous on surface. Leaf-sheath auricles absent or erect. Ligule a fringe of hairs, $0.5-1 \mathrm{~mm}$ long. Leaf-blades erect, flat or involute, $10-20 \mathrm{~cm}$ long, $1-3 \mathrm{~mm}$ wide. Leaf-blade surface puberulous, hairy adaxially.

Inflorescence. Inflorescence composed of racemes. Racemes borne along a central axis, appressed, paucilateral, $1-2 \mathrm{~cm}$ long, bearing few fertile spikelets. Central inflorescence axis $5-15 \mathrm{~cm}$ long, tip with blunt extension. Rhachis subterete, terminating in a barren extension, extension bristle-like, extension 5 mm long. Spikelet packing abaxial, irregular. Spikelets subtended by an involucre. Fertile spikelets sessile. Involucre composed of bristles, 5 mm long. Involucral bristles persistent, 1 per spikelet.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate, dorsally compressed, acute, 2-2.5 mm long, falling entire.

Glumes. Glumes shorter than spikelet, thinner than fertile lemma. Lower glume ovate, 0.33 length of spikelet, membranous, without keels, 3 -veined. Lower glume apex acute. Upper glume elliptic, 0.5 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5-7 -veined, obtuse or acute. Fertile lemma elliptic, 2-2.5 mm long, indurate, without keel. Lemma surface rugulose. Lemma margins involute. Lemma apex acuminate. Palea reflexed at apex, indurate. Palea surface rugose.

Distribution (TDWG). Continent. South America.
Country /Province/State. Caribbean. Cuba.

## Paspalidium tabulatum (Hack.) C.E.Hubb. Kew Bull. 1934, 448 (1934).

Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), D.Sharp, D. \& B.K.Simon, AusGrass (2002).

TYPE from Australia. Basionym or Replaced Name: Panicum tabulatum Hack., Bot. Jahrb. Syst. 6: 234 (1885). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Neumann s.n., 29 Apr 1875, Australia: Western Australia (K; IT: US-81289 (fragm.)).

Illustrations: None found.
Images: D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002);
Derivation (Clifford \& Bostock 2007): L. tabula, table; -ata, possessing. Palea oblong.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Perennial. Rootstock evident. Culms erect, 40-60 cm long, 4-7noded. Culm-nodes glabrous. Leaf-sheaths keeled, glabrous on surface. Ligule a fringe of hairs, 0.35-0.45 mm long. Leaf-blades conduplicate, $5-8 \mathrm{~cm}$ long, $1.5-3 \mathrm{~mm}$ wide. Leaf-blade surface scabrous, glabrous. Leaf-blade apex attenuate.

Inflorescence. Inflorescence composed of racemes. Racemes borne along a central axis, appressed, unilateral, $0.5-1.2 \mathrm{~cm}$ long, bearing few fertile spikelets, bearing $2-5$ fertile spikelets on each. Central inflorescence axis $7.5-9 \mathrm{~cm}$ long, tip filiform. Rhachis angular, scabrous on margins, terminating in a barren extension, extension bristle-like, extension $1.5-3 \mathrm{~mm}$ long. Spikelet packing abaxial, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $0.4-1.5 \mathrm{~mm}$ long, smooth or scaberulous, tip discoid.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate, laterally compressed, plano-convex, 3.54.4 mm long, $0.8-0.9 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.7-0.85$ mm long, 0.2 length of spikelet, membranous, without keels, 5-7 -veined. Lower glume apex obtuse or acute. Upper glume lanceolate, 3.5-4.4 mm long, 1 length of spikelet, membranous, without keels, 3 veined. Upper glume apex obtuse or acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, lanceolate, $3.5-4.4 \mathrm{~mm}$ long, 1 length of spikelet, membranous, $11-13$-veined, sulcate, obtuse or acute. Fertile lemma elliptic, 2.1-2.3 mm long, indurate, without keel. Lemma surface rugose. Lemma margins involute. Lemma apex acute. Palea reflexed at apex, indurate, 2-keeled. Palea surface rugose.

Flower and Fruit. Caryopsis with adherent pericarp. Distribution (TDWG). Continent. Australasia. Country /Province /State. Australia. Western Australia. Eremean.

Paspalidium udum S. T. Blake. Proc. Roy. Soc. Queensl. 1xii. 98 (1952).

Images: D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002);,
Derivation (Clifford \& Bostock 2007): L. damp. Growing in swampy areas.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Habit, Vegetative Morphology. Perennial. Rhizomes elongated. Culms erect or decumbent, 40-90 cm long, spongy, 6-10 -noded. Culm-nodes glabrous. Leaf-sheaths glabrous on surface. Ligule a fringe of hairs, $1-1.3 \mathrm{~mm}$ long. Leaf-blades flat or involute, $15-20 \mathrm{~cm}$ long, $5-11 \mathrm{~mm}$ wide. Leaf-blade surface glabrous.

Inflorescence. Inflorescence composed of racemes. Racemes borne along a central axis, appressed, unilateral, $1.5-2 \mathrm{~cm}$ long, bearing $7-13$ fertile spikelets on each, secondarily branched. Central inflorescence axis $12-19 \mathrm{~cm}$ long, tip filiform. Rhachis narrowly winged, angular, scabrous on margins, terminating in a barren extension, extension bristle-like, extension $2-4 \mathrm{~mm}$ long. Spikelet packing abaxial, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $0.25-0.35 \mathrm{~mm}$ long, tip discoid.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, 2.7-3 mm long, $1.1-1.4 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes shorter than spikelet, thinner than fertile lemma. Lower glume oblong, $0.4-0.6 \mathrm{~mm}$ long, 0.1-0.2 length of spikelet, hyaline or membranous, without keels, $0-1$-veined. Lower glume lateral veins absent. Lower glume apex truncate or obtuse. Upper glume elliptic or obovate, $1.7-2 \mathrm{~mm}$ long, 0.66 length of spikelet, hyaline or membranous, without keels, 3-5 -veined. Upper glume apex truncate or obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, $2.7-3 \mathrm{~mm}$ long, 1 length of spikelet, membranous, 5 -veined, acute. Fertile lemma elliptic, $2.5-2.9 \mathrm{~mm}$ long, indurate, without keel. Lemma surface rugose. Lemma margins involute. Lemma apex acute. Palea reflexed at apex, indurate, 2-keeled. Palea surface rugose.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Australasia.
Country /Province/State. Australia. Northern Territory, Queensland.
Darwin \& Gulf. North, Central.

Paspalidium utowanaeum (Scribner) G. Davidse \& R.W. Pohl. Novon, 2(2): 106: (1992).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online (as Setaria), W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

Basionym or Replaced Name: Setaria utowanaea (Scribn.) Pilger, in Engl. \& Prantl, Nat. Pflanzenfam. Aufl. 2, 14e. 72 (1940).

Illustrations (Books): A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (as Panicum).
Illustrations (Journals): Darwiniana (37: 112, Fig. 20 (1999) as Setaria).
Derivation (Clifford \& Bostock 2007): commemmorating the yacht "Utowana" on which several United States scientists visited the Caribbaean.

Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.

Habit, Vegetative Morphology. Perennial. Stolons present. Culms slender, 25-50 cm long. Leafsheaths wider than blade at the collar. Ligule a fringe of hairs. Leaf-blades erect or spreading, $10-20 \mathrm{~cm}$ long, $1-3 \mathrm{~mm}$ wide. Leaf-blade surface scabrous, rough adaxially. Leaf-blade margins scabrous.

Inflorescence. Inflorescence composed of racemes. Racemes borne along a central axis, distant, appressed, paucilateral, $1-3 \mathrm{~cm}$ long, bearing few fertile spikelets. Central inflorescence axis 6-12 cm long, tip with blunt extension. Rhachis subterete, terminating in a barren extension, extension bristle-like, extension $2-4 \mathrm{~mm}$ long. Spikelet packing abaxial, irregular. Spikelets solitary or subtended by an involucre. Fertile spikelets sessile. Involucre composed of bristles, 4 mm long. Involucral bristles persistent, $0-1$ per spikelet.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate or oblong, dorsally compressed, subacute, 2 mm long, falling entire.

Glumes. Glumes shorter than spikelet, thinner than fertile lemma. Lower glume ovate, clasping, 0.330.5 length of spikelet, membranous, without keels, 3 -veined. Lower glume apex obtuse. Upper glume elliptic, 0.66 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5 -veined, obtuse or acute. Palea of lower sterile floret 0.5 length of lemma. Fertile lemma elliptic, 2 mm long, indurate, without keel. Lemma surface rugulose. Lemma margins involute. Lemma apex acute. Palea reflexed at apex, indurate. Palea surface rugose.

Distribution (TDWG). Continent. South America.
Country /Province/State. Caribbean, Northern South America, Western South America. Cuba, Leeward Is, Puerto Rico. Surinam, Venezuela. Colombia.

## Paspalidium vaillantii Jac.- Fel.

TYPE from Gabon.
Recent Synonyms: Setaria variifolia (Swallen) G. Davidse, Ann. Missouri Bot. Gard. 68(1): 226 (1981).

Illustrations (Books): H.Jacques-Felix, Les Graminees d'Afrique tropicale (1962) (241, Fig. 169).
Derivation (Clifford \& Bostock 2007): In honor of Sebastian Vaillant (1669-1722) French botanist.
Classification. Subfamily Panicoideae. Tribe: Paniceae. Subtribe Cenchrinae.
Distribution (TDWG). Continent. Africa.
Country /Province /State. West-Central Tropical Africa. Congo.

Paspalum achlysophilum (Soderstr.)S. Denham. Ann. Missouri Bot. Gard. 92(4): 478 (2005).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online (as Thrasya), W.D.Clayton \& K.Harman, GrassBase (2008) and online (as Thrasya).

Basionym or Replaced Name: Thrasya achlysophila Soderstr., Mem. N. Y. Bot. Gard.12. No. 3, 4 (1965). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: R.S. Cowan \& T.R. Soderstrom 2166, 13 Mar 1962, Guyana: Kaiteur Plateau, bottom of Potaro Gorge near Kaiteur Falls to western rim of splash-basin of falls, ca. 700 ft (US-2380408, photo SI; IT: K, NY).

Illustrations (Books): E.Judziewicz, Flora of the Guianas, 187. Poaceae (1990) (Fig. 110 as Thrasya achlysophila).

Derivation (Clifford \& Bostock 2007): Gk achlys, mist; phileo, love. Grows on wet rocks adjacent to waterfalls.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect or geniculately ascending, 10-25 cm long. Culm-nodes glabrous. Leaf-sheaths longer than adjacent culm internode, keeled. Ligule an eciliate membrane, 1.5 mm long, erose. Leaf-blades lanceolate, $3-8 \mathrm{~cm}$ long, $5-8 \mathrm{~mm}$ wide. Leaf-blade surface pilose, densely hairy, hairy on both sides, with tubercle-based hairs. Leaf-blade margins ciliate.

Inflorescence. Inflorescence composed of racemes, terminal and axillary. Racemes 1, single, arcuate, unilateral, $2-3 \mathrm{~cm}$ long. Rhachis narrowly winged, 1.2 mm wide, glabrous on surface, pubescent on margins, terminating in a barren extension, extension flattened. Spikelet packing alternately adaxial and
abaxial, regular, 1 -rowed. Spikelets pectinate, in pairs. Fertile spikelets sessile and pedicelled, 2 in the cluster. Pedicels present, fused to internode, united wholly.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or ovate, dorsally compressed, $2.4-2.6 \mathrm{~mm}$ long, 1.1 mm wide, falling entire. Spikelet callus square, 0.5 mm long, pubescent.

Glumes. Glumes dissimilar, shorter than spikelet, thinner than fertile lemma. Lower glume oblate, $0.2-$ 0.5 mm long, $0.1-0.2$ length of spikelet, hyaline, without keels, 0 -veined. Lower glume lateral veins absent. Lower glume apex obtuse. Upper glume elliptic, $0.75-0.8$ length of spikelet, chartaceous, without keels, 7 veined. Upper glume surface pilose. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret oblong or obovate, 1 length of spikelet, membranous, 4 -veined, sulcate, acute. Fertile lemma ovate, 2.4 mm long, coriaceous, without keel. Lemma surface papillose or striate. Lemma margins involute. Lemma apex acute. Palea coriaceous.

Flower and Fruit. Lodicules 2, fleshy, truncate. Anthers 3.
Distribution (TDWG). Continent. South America.
Country /Province/State. Northern South America. Guyana.

Paspalum acuminatum Raddi. Agrost. Bras. 25. (1823).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: G. Raddi s.n., Brazil: Guanabara: prope Rio de Janeiro (PI; IT: BAA (fragm. ex FI), FI, K, PI, US-2941966 (fragm. ex FI \& photo)).

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Stolons present. Culms decumbent, 35-65 cm long, 1-1.5 mm diam., rooting from lower nodes. Culm-internodes elliptical in section, solid, distally glabrous. Culmnodes glabrous. Lateral branches ample. Leaf-sheaths glabrous on surface. Ligule an eciliate membrane, 12 mm long. Leaf-blade base broadly rounded. Leaf-blades lanceolate, $3-13 \mathrm{~cm}$ long, $4-12 \mathrm{~mm}$ wide. Leafblade surface glabrous.

Inflorescence. Inflorescence composed of racemes. Racemes $1-5$, single or paired or digitate, unilateral, $2.5-5 \mathrm{~cm}$ long. Rhachis broadly winged, foliaceous, $2.5-3 \mathrm{~mm}$ wide, scabrous on margins. Spikelet packing abaxial, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, compressed strongly, acuminate, $3.2-4 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1.2 length of fertile lemma, 1 length of spikelet, membranous, 5 -veined, with unevenly spaced veins (close to margin). Fertile lemma obovate, $2.4-3 \mathrm{~mm}$ long, indurate, yellow, without keel. Lemma surface scaberulous. Lemma margins involute. Lemma apex obtuse, pubescent. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1-1.2 mm long, purple. Caryopsis with adherent pericarp.

## Paspalum acutifolium Leon. Mem. Torr. Bot. Cl. xvi. 58 (1920).

Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Cuba. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: IT: Bro. Leon \& M. Roca 8164, 10 Aug 1918, Cuba. Santa Clara: Sabana de Motembo (US-1060709).

Illustrations (Books): A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (215, Fig. 154). Derivation (Clifford \& Bostock 2007): L. acuo, sharpen; folium, leaf. Leaf-blades sharply tapering.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms geniculately ascending, 20-48 cm long. Culm-nodes bearded. Lateral branches lacking. Leaves mostly basal. Leaf-sheaths keeled, pilose, with tubercle-based hairs, outer margin hairy. Ligule an eciliate membrane, $1.5-2 \mathrm{~mm}$ long. Leaf-blades 6-17 cm long, $4-8 \mathrm{~mm}$ wide. Leaf-blade surface pilose, sparsely hairy, hairy on both sides, with tubercle-based hairs.

Inflorescence. Inflorescence composed of racemes. Racemes 2-4, borne along a central axis, unilateral, $2-8 \mathrm{~cm}$ long. Central inflorescence axis $1-3.5 \mathrm{~cm}$ long. Rhachis wingless, angular, 0.7 mm wide. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or oblong, dorsally compressed, turgidly plano-convex, obtuse, 1.8 mm long, $0.9-1 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, purple, without keels, 3 -veined. Upper glume margins eciliate or pubescent. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, purple, 3 -veined, concave across back, eciliate on margins or pubescent on margins, obtuse. Fertile lemma ovate, 1.6 mm long, indurate, pallid, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Caribbean. Cuba.
Distrito Federal.

Paspalum acutum Chase. Journ. Wash. Acad. Sc. xvii. 146. (1927).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Panama. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: E.P. Killip 4003, 18 Sep 1917, Panama: Canal Zone, Ancon (US-1037443).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. acuo, sharpen. Spikelets acute to acuminate.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.

Habit, Vegetative Morphology. Perennial. Culms robust, 100-200 cm long. Lateral branches lacking. Leaves basal and cauline. Leaf-sheaths as wide as blade at the collar, striately veined, outer margin hairy. Leaf-sheath oral hairs ciliate. Ligule an eciliate membrane, $1.5-2 \mathrm{~mm}$ long. Leaf-blades $30-75 \mathrm{~cm}$ long, $14-18 \mathrm{~mm}$ wide. Leaf-blade surface pubescent, sparsely hairy, hairy adaxially. Leaf-blade margins spinulose. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes 5-10, borne along a central axis, drooping, unilateral, $8-12 \mathrm{~cm}$ long. Central inflorescence axis $5-15 \mathrm{~cm}$ long. Rhachis wingless, angular, $1-$ 1.5 mm wide, scabrous on margins, glabrous on margins. Raceme-bases brief, hirsute. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, acute, $3.5-3.9 \mathrm{~mm}$ long, 2 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, dark green, without keels, 5 -veined. Upper glume surface glabrous or puberulous. Upper glume margins eciliate or ciliate. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, dark green, 5 -veined, with unevenly spaced veins (near margin), eciliate on margins or ciliate on margins, acute. Fertile lemma elliptic, 3 mm long, 1.8 mm wide, indurate, pallid or yellow, without keel. Lemma surface papillose. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. North America, South America.
Country /Province /State. Mexico. Gulf (Mexico). Mesoamerica, Brazil. El Salvador, Panama. Brazil West Central, Brazil North.

TYPE from Mexico. Basionym or Replaced Name: Dimorphostachys adoperiens E. Fourn., Mexic. Pl. 2: 15 (1886)
. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Schaffner 271, Mexico. Veracruz: Orizaba (P; IT: NY, US-865867 (fragm. ex P)).

Illustrations (Journals): Ann. Missouri Bot. Gard. (92: 480: Fig. 7 (2005)).
Derivation (Clifford \& Bostock 2007): L. adoperio, cover. Plants forming a dense sward.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms geniculately ascending, 35-95 cm long. Culm-internodes elliptical in section, ridged, distally glabrous. Culm-nodes glabrous. Lateral branches sparse. Leaf-sheaths glabrous on surface or pilose, with tubercle-based hairs, outer margin hairy. Ligule an eciliate membrane, $2-3 \mathrm{~mm}$ long. Leaf-blades ascending, $5-22 \mathrm{~cm}$ long, $8-16 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or hispid, with tubercle-based hairs.

Inflorescence. Inflorescence composed of racemes, terminal and axillary, without bracts or bracteate at branch bases. Racemes 2-4, borne along a central axis, unilateral, 3-7.5 cm long. Central inflorescence axis $1-7 \mathrm{~cm}$ long. Rhachis wingless, angular, 0.8 mm wide, with scattered hairs or glabrous on surface. Spikelet packing crowded. Spikelets in pairs. Fertile spikelets sessile and pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets orbicular or obovate, dorsally compressed, planoconvex, obtuse, $2.1-2.5 \mathrm{~mm}$ long, $1.7-1.8 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one to two the lower present in some spikelets or two, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, $0.1-0.5$ length of spikelet, membranous. Lower glume apex obtuse or acute. Upper glume elliptic, 0.8 length of spikelet, membranous, without keels, 5 -veined. Upper glume primary vein eciliate or pubescent. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5 -veined, glabrous or puberulous, hairy on veins, obtuse. Fertile lemma elliptic or orbicular, $2-2.2 \mathrm{~mm}$ long, indurate, pallid, without keel. Lemma surface striate. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. North America, South America.
Country /Province /State. Mexico. Northeast Mexico, Gulf (Mexico), Northwest Mexico, Southwest Mexico, Southeast Mexico. Mesoamerica. El Salvador, Guatemala, Honduras, Nicaragua.

TYPE from Guyana. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: British Guiana: Mazaruni Distr., collected in moist sandy crevices on rocks in the open, ca. 75 m , Macreba Falls, Kurapung River, 3 Sept 1925, R. A. Altson 392 (HT: US-1539437).

Illustrations (Books): J.A.Steyermark et al, Flora of the Venezuelan Guayana Vol. 8 (2004) (227, Fig. 169).

Illustrations (Journals): Ann. Missouri Bot. Gard. (92: 483: Fig. 9 (2005)).
Derivation (Clifford \& Bostock 2007): In honor of Ralph Abbey Altson (fl. 1925) who collected in British Guiana, now Guyana.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect or geniculately ascending, 35-70 cm long, without nodal roots or rooting from lower nodes. Lateral branches lacking or sparse. Leaf-sheaths glabrous on surface, outer margin hairy. Ligule an eciliate membrane, $1-3 \mathrm{~mm}$ long, brown. Leaf-blades linear or lanceolate, 6-25 cm long, 7-12 mm wide. Leaf-blade surface glabrous or pubescent. Leaf-blade margins scabrous.

Inflorescence. Inflorescence composed of racemes, terminal and axillary. Peduncle $3-7 \mathrm{~cm}$ long. Racemes 1, single, arcuate, unilateral, 3-6 cm long. Rhachis angular, $0.3-0.9 \mathrm{~mm}$ wide. Spikelet packing 2 -rowed. Spikelets in pairs. Fertile spikelets pedicelled, heteromorphic (upper spikelet with smaller lower glume). Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, 2-2.8 mm long, falling entire.

Glumes. Glumes two, reaching apex of florets, thinner than fertile lemma. Lower glume oblong or ovate, $0.3-1 \mathrm{~mm}$ long, $0.15-0.33$ length of upper glume. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface glabrous or puberulous. Upper glume margins eciliate or ciliolate.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 3-5 -veined, without grooves or sulcate, glabrous or puberulous, eciliate on margins or ciliolate on margins. Fertile lemma elliptic, $2-2.8 \mathrm{~mm}$ long, indurate, yellow, without keel. Lemma surface granulose. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Northern South America. Guyana, Surinam, Venezuela.

Paspalum ammodes Trin. Gram. Panic. 120. (1826).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: G.H. von Langsdorff s.n., Brazil: Minas Gerais: pr. Tejuco, in arenosis (LE-TRIN-0415.01; IT: US-2941973).

Recent Synonyms: Paspalum diamantinum Swallen, Phytologia 14: 368 (1967).

Illustrations (Books): S.A.Renvoize, The Grasses of Bahia, 1984 (208, Fig. 77), L.B. Smith, D.C. Wasshausen, R.M. Klein Flora Illustrada Catarinensis Gramineas (1981-1982) (983, Fig 194).

Illustrations (Journals): Ann. Missouri Bot. Gard. (91: 232: Fig. 3 (2004)).
Derivation (Clifford \& Bostock 2007): Gk. ammos, sand. Growing in sandy soils.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms 65 cm long. Culm-nodes bearded. Leaves mostly basal, without demarcation between sheath and blade. Leaf-sheaths pilose, outer margin hairy. Ligule an eciliate membrane, $0.6-0.7 \mathrm{~mm}$ long. Leaf-blades flat or conduplicate, $12-20 \mathrm{~cm}$ long, $1.5-2.5 \mathrm{~mm}$ wide. Leaf-blade surface pubescent, sparsely hairy.

Inflorescence. Inflorescence composed of racemes. Peduncle 10 cm long, glabrous. Racemes 6, digitate, unilateral, $2-3.5 \mathrm{~cm}$ long, 4 mm wide. Central inflorescence axis 3.5 cm long. Rhachis angular, 0.7 mm wide, smooth on margins. Spikelet packing abaxial, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, 0.5 mm long, tip cupuliform.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblanceolate, dorsally compressed, plano-convex, $3.3-3.5 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, mid-green or purple (margins), without keels, 5-6 -veined. Upper glume surface pilose, with tubercle-based hairs. Upper glume hairs $1-2 \mathrm{~mm}$ long. Upper glume apex obtuse or acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, mid-green or purple (margins), 5-6-veined, pilose, with tubercle-based hairs, bearing hairs $1-2 \mathrm{~mm}$ long, obtuse or acute. Fertile lemma lanceolate or elliptic, $3-3.3 \mathrm{~mm}$ long, indurate, yellow, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Northern South America, Western South America, Brazil, Southern South America. Venezuela. Bolivia. Brazil West Central, Brazil Northeast, Brazil Southeast, Brazil North, Brazil South. Paraguay.

Paspalum arundinaceum Poir. Encyc. Suppl. iv. 310. (1810).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from USA. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: USA: Carolina, M. Martin s.n.Type locality published erroneously according to Chase, Contr. U.S. Natl. Herb. 28: 206 (1929)--actually is Cayenne on type specimen.

Recent Synonyms: Paspalum secans Hitchc. \& Chase, Contr. U.S. Natl. Herb. 18 (7): 319 (1917)
Illustrations (Books): A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (233, Fig. 183).
Derivation (Clifford \& Bostock 2007): L. arundo, reed; -acea, like. Culm tall, thereby resembling a reed.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect or geniculately ascending, 75-150 cm long. Culm-nodes purple. Leaf-sheaths glabrous on surface, outer margin hairy. Ligule an eciliate membrane, $1.3-1.8 \mathrm{~mm}$ long, setose from base of abaxial surface. Leaf-blades $35-50 \mathrm{~cm}$ long, $5-7 \mathrm{~mm}$ wide. Leaf-blade surface scabrous, rough on both sides. Leaf-blade margins scabrous.

Inflorescence. Inflorescence composed of racemes. Racemes 5-10, borne along a central axis, unilateral, $10-17 \mathrm{~cm}$ long. Central inflorescence axis $6-10 \mathrm{~cm}$ long. Rhachis 0.5 mm wide, scabrous on margins. Spikelet packing 2 -rowed. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, $0.5-$ 1.5 mm long, scabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, plano-convex, 2.83.2 mm long, falling entire.

Glumes. Glumes one to two the lower present in some spikelets, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0-1.8 \mathrm{~mm}$ long, $0-0.5$ length of spikelet. Upper glume ovate, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 3 -veined, obtuse. Fertile lemma obovate, 2.8-3.2 mm long, indurate, yellow, without keel. Lemma surface striate. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Pacific, South America.
Country /Province/State. North-central Pacific. Hawaii. Mesoamerica, Caribbean, Northern South America, Western South America, Brazil, Southern South America. Belize, Costa Rica, El Salvador, Honduras, Nicaragua. Bahamas, Cuba, Dominican Republic, Haiti, Jamaica, Leeward Is, Puerto Rico. French Guiana, Guyana, Venezuela. Colombia. Brazil North.

Central inflorescence axis 5 cm long. Rhachis narrowly winged, flattened, 2-3 mm wide. Spikelet packing abaxial, crowded, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, with cordate base, dorsally compressed, plano-convex, obtuse, 6.5 mm long, 3 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, auriculate at base (cordate), 1 length of spikelet, membranous, without keels, winged on margins, 7-9 -veined. Upper glume surface scabrous, puberulous, with an apical beard. Upper glume margins ciliolate. Upper glume hairs $1.5-2.5 \mathrm{~mm}$ long. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret ovate, auriculate at base (cordate), 5 mm long, 0.9 length of spikelet, membranous, winged on margins, 3 -veined, scabrous, with conspicuous apical hairs, ciliolate on margins, obtuse. Fertile lemma elliptic, 3.7 mm long, 1 mm wide, indurate, pallid, without keel. Lemma surface with conspicuous apical hairs. Lemma margins involute, pubescent. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Northern South America, Western South America, and Brazil. Brazil West Central, Brazil North, Brazil Southeast.

Mato Grosso, Goiás. Amazonas. Minas Gerais, Sao Paulo.

TYPE from Venezuela. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: G. Davidse, O. Huber \& S.S. Tillett 17414, 8 May 1979, Venezuela: Amazonas: Atabapo Dept.: SE bank of the middle part of Caño Yagua at Cucurital de Yagua, $3 ? 6^{\prime} \mathrm{N} 66 ? 4^{\prime} \mathrm{W}, 120 \mathrm{~m}$, white sand savanna (MO2769069; IT: IAN, SI, US-3208025, VEN).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From Depto Atabapo, Venezuela.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, $45-75 \mathrm{~cm}$ long, 2-3 -noded. Culm-nodes brown, glabrous or pubescent. Lateral branches lacking. Leaves mostly basal. Leaf-sheaths without keel, striately veined, pilose, outer margin glabrous. Ligule an eciliate membrane, $0.5-1.2 \mathrm{~mm}$ long, erose. Leaf-blades filiform, involute, $6-18.5 \mathrm{~cm}$ long, $0.3-0.4 \mathrm{~mm}$ wide. Leaf-blade surface ribbed, grooved adaxially, scabrous, rough adaxially.

Inflorescence. Inflorescence composed of racemes. Peduncle $4-17 \mathrm{~cm}$ long, glabrous. Racemes 1 , single, arcuate, unilateral, $3-9.5 \mathrm{~cm}$ long. Rhachis wingless, angular, $0.4-0.5 \mathrm{~mm}$ wide, glabrous on surface or puberulous on surface. Spikelet packing abaxial. Raceme-bases brief, pilose. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $0.1-0.3 \mathrm{~mm}$ long, pubescent.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, 2.6-3.6 mm long, $1-1.3 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, shorter than spikelet, thinner than fertile lemma. Upper glume ovate, $2.4-3 \mathrm{~mm}$ long, $0.8-0.9$ length of spikelet, membranous, without keels, 3 -veined. Upper glume surface pubescent. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, with palea or without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 3 -veined, pubescent. Fertile lemma elliptic, 2.6-3.5 mm long, 1-1.3 mm wide, chartaceous, yellow, without keel, 3 -veined, 0-3 veined. Lemma surface papillose. Lemma margins involute. Palea involute, chartaceous.

Flower and Fruit. Anthers 3, $1.5-1.9 \mathrm{~mm}$ long, purple. Caryopsis with adherent pericarp, obovoid, $1.4-1.5 \mathrm{~mm}$ long. Embryo 0.4 length of caryopsis. Hilum punctiform.

Distribution (TDWG). Continent. South America.
Country /Province /State. Northern South America. Venezuela.

Paspalum auricomum (A.G.Burman) S. Denham. Ann. Missouri Bot. Gard. 92(4): 485 (2005).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online (as Thrasya), W.D.Clayton \& K.Harman, GrassBase (2008) and online (as Thrasya).

Basionym or Replaced Name: Thrasya auricoma A.G.Burman, Brittonia, 34(4): 461 (1982).
Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. aureus, golden-yellow; coma, a head of hair. Leaf-blades golden yellow.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, $35-40 \mathrm{~cm}$ long. Culm-nodes bearded. Leaf-sheaths mostly shorter than adjacent culm internode or longer than adjacent culm internode, keeled, hirsute, with tubercle-based hairs, outer margin hairy. Ligule an eciliate membrane, $1.5-2 \mathrm{~mm}$ long. Leaf-blades conduplicate, $6-20 \mathrm{~cm}$ long, 1 mm wide. Leaf-blade surface pilose, hairy on both sides. Leafblade margins tuberculate-ciliate. Leaf-blade apex attenuate.

Inflorescence. Inflorescence composed of racemes. Peduncle glabrous or pilose above. Racemes 1, single, arcuate, unilateral, $1-4 \mathrm{~cm}$ long. Rhachis broadly winged, folded longitudinally to embrace spikelets, $3-4 \mathrm{~mm}$ wide, pilose on surface, tuberculate on margins, ciliate on margins, terminating in a barren extension, extension flattened. Rhachis hairs yellow. Spikelet packing alternately adaxial and abaxial, regular, 1 -rowed. Spikelets pectinate, in pairs. Fertile spikelets sessile and pedicelled, 2 in the cluster. Pedicels present, fused to internode, united wholly.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, 2 mm long, 0.6 mm wide, falling entire. Spikelet callus square, 0.5 mm long, pubescent.

Glumes. Glumes one the lower absent or obscure, shorter than spikelet, thinner than fertile lemma. Upper glume elliptic, 0.8-0.9 length of spikelet, membranous, without keels, 2 -veined. Upper glume surface glabrous or pilose, hairy at apex. Upper glume apex erose, truncate or acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret elliptic or oblong, 1 length of spikelet, coriaceous, 4 -veined, sulcate or readily splitting into two halves, ciliate on margins (above), acute. Palea of lower sterile floret becoming indurate on flanks at maturity. Fertile lemma elliptic, 1.7 mm long, coriaceous, without keel. Lemma surface striate, with conspicuous apical hairs. Lemma margins involute. Lemma apex acute. Palea coriaceous.

Flower and Fruit. Lodicules 2, fleshy, truncate. Anthers 3.
Distribution (TDWG). Continent. South America.

Paspalum axillare Swallen. Bull. Torr. Bot. Club. 75: 84 (1948).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online (as Thrasya), W.D.Clayton \& K.Harman, GrassBase (2008) and online (as Thrasya).

Basionym or Replaced Name: Thrasya axillaris (Swallen) A.G.Burman ex E.J.Judziewicz, Fl. Guianas, Ser. A, 8(187): 630: (1990).

Illustrations (Books): J.A.Steyermark et al, Flora of the Venezuelan Guayana Vol. 8 (2004) (284, Fig. 230 asThrasya).

Derivation (Clifford \& Bostock 2007): L. axillary. With panicles arising from the upper leaf axils.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Annual. Culms rambling, $20-40 \mathrm{~cm}$ long, $2-3 \mathrm{~mm}$ diam. Leafsheaths glabrous on surface. Ligule an eciliate membrane, $0.6-0.9 \mathrm{~mm}$ long, acute. Leaf-blades $3-10 \mathrm{~cm}$ long, $1.5-2.7 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or puberulous, sparsely hairy, hairy adaxially.

Inflorescence. Inflorescence composed of racemes, terminal and axillary. Peduncle $2-4 \mathrm{~cm}$ long. Racemes 1, single, unilateral, $1.8-3 \mathrm{~cm}$ long. Rhachis narrowly winged, $0.4-0.6 \mathrm{~mm}$ wide, terminating in a barren extension, extension flattened. Spikelet packing alternately adaxial and abaxial, regular, 1 -rowed. Spikelets in pairs. Fertile spikelets pedicelled, 2 in the cluster. Pedicels present, fused to internode, united wholly, reduced to a stump, scabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, $0.9-1.1 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes both absent or obscure.
Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, hyaline, 3 -veined, obscurely veined, acute. Fertile lemma elliptic, $0.9-1.1 \mathrm{~mm}$ long, coriaceous, without keel. Lemma surface punctate. Lemma margins involute. Lemma apex acute. Palea coriaceous.

Flower and Fruit. Anthers 2.

TYPE from Paraguay. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: ST: M.S. Bertoni 2124, 1906, Paraguay: in saxosis arenosis ad oras fluminis Paran?prope Puerto Bertoni et Salto Guair? alt. 120-170 m (W). LT: M.S. Bertoni 4054, 22 Jul 1906, Paraguay: Alto Paran?(W; ILT: US1125908). LT designated by F. Zuloaga \& O. Morrone, Cat. New. World Grass. 3: 448 (2003). ST: M.S. Bertoni 3888, 1 Apr 1906, Paraguay: Alto Paran?(US-2854146, W).

Recent Synonyms: Paspalum potamophilum Renv., Kew Bulletin 42: 922 (1987).
Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 1, Aristidoideae a Pharoideae (2012) (382), L.B. Smith, D.C. Wasshausen, R.M. Klein Flora Illustrada Catarinensis Gramineas (1981-1982) (945, Fig 190).

Derivation (Clifford \& Bostock 2007): in honor of Moisis de Blanquis Bertoni (fl. 1918-45) who collected in South America.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.

Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, 30-50 cm long. Lateral branches lacking. Ligule an eciliate membrane, $1-2 \mathrm{~mm}$ long. Leaf-blades filiform, involute, $10-25 \mathrm{~cm}$ long, $0.5-0.7$ mm wide.

Inflorescence. Inflorescence composed of racemes. Racemes 2, paired, erect, unilateral, 8-10 cm long. Central inflorescence axis $1-2 \mathrm{~cm}$ long. Rhachis narrowly winged, angular (wavy). Spikelet packing abaxial, 2 -rowed. Spikelets solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate or elliptic, dorsally compressed, planoconvex, acute, 4.5 mm long, $1-1.2 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume lanceolate, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume surface pubescent. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, lanceolate, 1 length of spikelet, membranous, 3 -veined, pubescent, acute. Fertile lemma lanceolate or elliptic, gibbous, 2.5 mm long, indurate, pallid, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. $n=10$ ( 1 ref TROPICOS). $2 n=20$ ( 1 ref TROPICOS).
Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil, Southern South America. Brazil South. Paraguay.
Sao Paulo Parana. Paraná.

Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: T.S. Filgueiras 2341, 10 Jun 1992, Brazil: Goiás: Niquelândia, Macedo, ca. 14?8' 483'W, 18 km N de Niquelândia, cerca de 80 cm de altura, raque cor verde (IBGE; IT: B, F, FLAS, ICN, ISC, K, MEXU, MO, P, R, RB, SI, SP, UB, US-3302711).

Illustrations (Journals): Novon (4: 19, Fig. 1 (1994)).
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rhizomes short, knotty. Culms geniculately ascending, 73-125 cm long, 6-9 -noded. Culm-internodes thin-walled, smooth or scaberulous. Culm-nodes brown, glabrous or pubescent. Lateral branches lacking or sparse. Leaves cauline. Leaf-sheaths without keel, striately veined, glabrous on surface or hirsute, with tubercle-based hairs, outer margin hairy. Ligule a ciliate membrane, $1-1.5 \mathrm{~mm}$ long. Leaf-blades $7.2-19.3 \mathrm{~cm}$ long, $1.2-5 \mathrm{~mm}$ wide. Leaf-blade midrib prominent beneath. Leaf-blade surface hirsute, with tubercle-based hairs. Leaf-blade margins ciliate. Leafblade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes (1-)2-4(-7), borne along a central axis, arcuate, unilateral, 3-8 cm long. Central inflorescence axis $4-5.8 \mathrm{~cm}$ long. Rhachis broadly winged, folded longitudinally to embrace spikelets, $9-14 \mathrm{~mm}$ wide, light-coloured (pallid \& green), ciliate on margins, terminating in a barren extension, extension flattened. Spikelet packing abaxial. Raceme-bases brief, pubescent. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $0.3-0.5 \mathrm{~mm}$ long, scabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate or elliptic, dorsally compressed, 3.8-4.5 mm long, $0.4-0.5 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, $3.8-4.5 \mathrm{~mm}$ long, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume surface pubescent, hairy below. Upper glume margins ciliate. Upper glume hairs $1.7-2.2 \mathrm{~mm}$ long. Upper glume awned, 1 -awned, awn 4-7 mm long.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 3 -veined, pubescent, hairy below, ciliate on margins, bearing hairs $1.7-2.2 \mathrm{~mm}$ long, awned. Awn of lower sterile floret $3.8-4.5 \mathrm{~mm}$ long. Fertile
lemma elliptic, 3.5-3.7 mm long, coriaceous, pallid, without keel, 5 -veined, more than 3-veined. Lemma lateral veins obscure. Lemma margins involute, ciliate, hairy above. Lemma hairs $0.5-1.2 \mathrm{~mm}$ long. Palea involute, $3.2-3.4 \mathrm{~mm}$ long, coriaceous. Palea apex papillose.

Flower and Fruit. Lodicules absent. Anthers 3, 2-2.2 mm long, yellow. Caryopsis with adherent pericarp, $1.2-1.5 \mathrm{~mm}$ long. Embryo $0.4-0.5$ length of caryopsis. Hilum punctiform.

Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil West Central.

Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Guyana. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: R.S. Cowan \& T.R. Soderstrom 2167, 13 Mar 1962, Guyana: Kaieteur Plateau, bottom of Potaro Gorge near Kaieteur Falls to western rim of splash-basin of Falls (US-2380409; IT: GH, K, NY, P, US-2382364).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. bifidus, split into two parts; folium, leaf. Leaf-apices bifid.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rhizomes elongated. Culms $15-30 \mathrm{~cm}$ long. Ligule an eciliate membrane, $0.5-0.7 \mathrm{~mm}$ long, truncate. Leaf-blades filiform, $9-11 \mathrm{~cm}$ long, $9-10 \mathrm{~mm}$ wide. Leaf-blade surface glabrous. Leaf-blade apex soon splitting or simple.

Inflorescence. Inflorescence composed of racemes. Racemes 2, paired, unilateral, 3-4 cm long. Central inflorescence axis 0.5 cm long. Rhachis 0.7 mm wide. Spikelet packing abaxial, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $0.4-0.7 \mathrm{~mm}$ long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or obovate, dorsally compressed, planoconvex, subacute, $2-2.2 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 5 -veined. Fertile lemma elliptic, $2-2.2 \mathrm{~mm}$ long, indurate, yellow, without keel. Lemma surface granulose. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province/State. Northern South America. Guyana.

Paspalum bifidum (Bertol.) Nash. Bull. Torr. Bot. Club, 1897, 192 (1897).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from USA. Basionym or Replaced Name: Panicum bifidum Bertol., Mem. Reale Accad. Sci. Ist. Bologna 2: 598, t. 41, f. 2, e-h (1850)
. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: IGS: "No locality cited. Plantae Alabamenses",.

Illustrations (Books): M.E.Barkworth et al, Flora of North America north of Mexico Vol 25 Poaceae, part 2 (2003) (589).

Derivation (Clifford \& Bostock 2007): L. bis, twice; findo, divide. With structures such as panicle branches regularly bifurcating.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Rhizomes short, fleshy, woolly. Culms erect, 60-120 cm long. Leaf-sheaths hirsute. Ligule an eciliate membrane, lacerate. Leaf-blades $15-40 \mathrm{~cm} \mathrm{long}, 4-12 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or hirsute.

Inflorescence. Inflorescence composed of racemes. Racemes 3-5, borne along a central axis, flexuous, unilateral, $4-16 \mathrm{~cm}$ long. Rhachis wingless, angular. Spikelet packing lax, regular. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, turgidly plano-convex, obtuse, $3.3-4 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one to two the lower present in some spikelets, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, 0.1 length of spikelet. Upper glume ovate, 0.9 length of spikelet, membranous, without keels, 5-7 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5-7 -veined, obtuse. Fertile lemma elliptic, 3.34 mm long, indurate, light brown, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. North America.
Country /Province /State. North-central USA, South-central USA, Southeastern USA. Texas. Arkansas, Florida, Georgia, Louisiana, North Carolina, South Carolina, Tennessee, Virginia.

Paspalum blodgettii Chapm. Fl. S. U. St. 571. (1860).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from USA. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: USA: Florida, Blodgett s.n..

Illustrations (Books): M.E.Barkworth et al, Flora of North America north of Mexico Vol 25 Poaceae, part 2 (2003) (578), A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (212, Fig. 151).

Derivation (Clifford \& Bostock 2007): in honor of Charles Osgood Blodgett (1904-) United States agronomist.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths herbaceous, not bulbous or thickened and forming a bulb. Culms erect, slender, $40-100 \mathrm{~cm}$ long. Culm-internodes distally glabrous. Culm-nodes constricted, black, glabrous or pubescent. Lateral branches lacking or sparse. Leaf-sheaths keeled, glabrous on surface or pubescent. Ligule an eciliate membrane, 0.5 mm long. Leaf-blades 5-25 cm long, $3-14 \mathrm{~mm}$ wide. Leaf-blade surface glabrous. Leaf-blade margins tuberculate-ciliate, hairy at base.

Inflorescence. Inflorescence composed of racemes. Racemes 2-12, borne along a central axis, arcuate, unilateral, $2-8 \mathrm{~cm}$ long. Rhachis wingless, angular, glabrous on surface. Spikelet packing crowded. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, plano-convex, obtuse, $1.3-1.4 \mathrm{~mm}$ long, 0.9 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 3-5 -veined. Upper glume surface pubescent, with capitate hairs. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 3-5 -veined, glabrous or pubescent, obtuse. Fertile lemma orbicular, $1.2-1.3 \mathrm{~mm}$ long, indurate, shiny, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. North America, South America.
Country /Province /State. Southeastern USA, Mexico. Florida. Northeast Mexico, Gulf (Mexico), Southwest Mexico, Southeast Mexico. Mesoamerica, Caribbean. Belize, Guatemala, Honduras, Panama. Bahamas, Cayman Is, Cuba, Dominican Republic, Haiti, Jamaica, Puerto Rico.

Tamaulipas. Veracruz. Oaxaca. Campeche, Chiapas, Quintana Roo, Yucatan.

TYPE from Netherlands Antilles. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: I. Boldingh 7370, 1909-1910, Netherlands Antilles: Bonaire (U-12305; IT: U, US-2855342 (fragm.)).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From Provincea de Buenos Aires, Argentina.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose, clumped densely. Cataphylls evident. Culms erect, $40-50 \mathrm{~cm}$ long. Culm-internodes distally glabrous. Culm-nodes black, glabrous. Lateral branches lacking. Leaf-sheaths longer than adjacent culm internode, keeled, glabrous on surface. Leaf-sheath oral hairs ciliate. Leaf-sheath auricles erect. Ligule an eciliate membrane. Leaf-blades convolute, $30-40 \mathrm{~cm}$ long, 2 mm wide. Leaf-blade surface hirsute.

Inflorescence. Inflorescence composed of racemes, embraced at base by subtending leaf. Racemes 4, borne along a central axis, unilateral. Rhachis angular, scabrous on margins. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, oblong, angular, scabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, acute, 2.5 mm long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume surface pilose. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, with obscure midvein, glabrous, truncate. Fertile lemma ovate, 2 mm long, indurate, pallid, without keel. Lemma surface scaberulous. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country/Province/State. Caribbean. Venezuelan and Netherlands Antilles.

Willd.): 1836 [by pencil]. HT: F.W.H.A. von Humboldt \& A.J.A. Bonpland 3081, no date, Peru (B-W; IT: BM, P, P-Bonpl., US-2942159 (fragm. ex B-W, P-Bonpl, P)).

Illustrations (Books): G.Harling \& C.Persson, Flora of Ecuador (2006) (78: 83, Fig. 4 (2006)).
Derivation (Clifford \& Bostock 2007): L. -anum, indicating connection. In honor of Aimi Jacques Alexandri Bonpland (1773-1858) French-born Brazilian botanist.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Rhizomes elongated. Stolons absent or present. Culms geniculately ascending, $20-35 \mathrm{~cm}$ long. Culm-internodes distally glabrous. Lateral branches lacking. Leaves mostly basal. Leaf-sheaths hirsute. Ligule an eciliate membrane. Leaf-blades $4-8 \mathrm{~cm}$ long, $5-6 \mathrm{~mm}$ wide. Leaf-blade surface pubescent, densely hairy.

Inflorescence. Inflorescence composed of racemes. Racemes 4-6, borne along a central axis, ascending, unilateral, $1-2.5 \mathrm{~cm}$ long. Rhachis narrowly winged, 2-3 mm wide, dark-coloured (purple), pubescent on surface. Spikelet packing abaxial, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, reduced to a stump, pubescent.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the
lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, 2.7-3 mm long, 1.5 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous. Fertile lemma elliptic, 2-2.5 mm long, indurate, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Western South America. Colombia, Ecuador, Peru.

Paspalum botterii (E. Fourn.) Chase. J. Wash. Acad. Sci. 13(20): 436 (1923).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Botteri 118, Aug, Mexico: Veracruz: Orizaba (P; IT: US-865864 (fragm. ex P)).

Illustrations (Books): W.Burger, Flora Costaricensis 15, Gramineae: Fieldiana Botany New Series 4 (1980) (406, Fig 147).

Derivation (Clifford \& Bostock 2007): in honor of Mateo Botteri (1808-1877) Italian botanist.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rootstock evident. Culms 40-110 cm long, 1-3 mm diam. Culm-internodes thin-walled, distally glabrous. Culm-nodes brown, glabrous or pubescent. Lateral branches lacking or sparse. Leaf-sheaths keeled, hispid, with tubercle-based hairs, outer margin hairy. Leaf-sheath oral hairs ciliate. Ligule an eciliate membrane, $1-1.5 \mathrm{~mm}$ long, brown. Collar pilose. Leaf-blade base cordate. Leaf-blades lanceolate, $17-44 \mathrm{~cm}$ long, $12-24 \mathrm{~mm}$ wide. Leaf-blade midrib conspicuous, keeled beneath. Leaf-blade surface pilose, hairy on both sides, with tubercle-based hairs.

Inflorescence. Inflorescence composed of racemes. Racemes 3-7, borne along a central axis, unilateral, $5-20 \mathrm{~cm}$ long. Central inflorescence axis $5-25 \mathrm{~cm}$ long. Rhachis narrowly winged, 1 mm wide, glabrous on margins or ciliate on margins. Spikelet packing crowded, irregular, 4 -rowed. Spikelets in pairs. Fertile spikelets pedicelled, 2 in the cluster. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, obtuse, $2.2-2.5 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one to two the lower present in some spikelets (the subsessile), shorter than spikelet, thinner than fertile lemma. Lower glume lanceolate, $0.5-1.6 \mathrm{~mm}$ long, 1 -veined. Lower glume lateral veins absent. Lower glume apex acute. Upper glume ovate, $0.8-0.9$ length of spikelet, membranous, without keels, 3-5 -veined. Upper glume surface puberulous. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 3-5 -veined. Fertile lemma elliptic or obovate, 2.2-2.4 mm long, indurate, pallid, without keel. Lemma surface striate. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3, $0.7-1 \mathrm{~mm}$ long, purple. Caryopsis with adherent pericarp, ellipsoid, 1.2 mm long.

Paspalum breve Chase. Urb. Symb. Antill. vii. 166 (1912).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Cuba. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Bro. Leon 1996, 16 Nov 1910, Cuba: La Habana, near Marianao (US-690378; IT: P).

Illustrations (Books): A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (224, Fig. 172).
Derivation (Clifford \& Bostock 2007): L. short. Culms short.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, mat forming. Stolons present. Culms slender, $5-10 \mathrm{~cm}$ long. Culm-nodes glabrous. Leaf-sheaths keeled, pubescent. Ligule an eciliate membrane, 0.5 mm long. Leaf-blades flat or conduplicate, $3-6 \mathrm{~cm}$ long, 2-4 mm wide.

Inflorescence. Inflorescence composed of racemes. Racemes 1, single, unilateral, $0.8-1.5 \mathrm{~cm}$ long. Rhachis wingless, angular, 0.7 mm wide. Spikelet packing abaxial. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, turgidly plano-convex, obtuse, 1.4 mm long, 1 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma, shiny. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume surface pubescent. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5 -veined, obtuse. Fertile lemma elliptic, 1.4 mm long, indurate, light brown, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province/State. Caribbean. Cuba, Dominican Republic, Haiti, Jamaica.

Paspaum buckleyanum Vasey. Bull. Torr. Bot Club. 13 (9): 167-168 (1996).
TYPE from USA. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Texas, Buckley s.n., HT: US 2854140.

Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 1, Aristidoideae a Pharoideae (2012) (383).

Paspalum buchtienii Hack. Fedde, Repert. Nov. Sp. vi. 153 (1908).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Bolivia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: $O$. Buchtien 420, 1906, Bolivia: La Paz: Sud-Yungas, Sirupaya a Yanacachi (W; IT: K (photo), SI (fragm. ex US \& photo), US-2854141 (fragm. ex W), US-1099147).

Illustrations (Books): S.A.Renvoize, Gramineas de Bolivia (1998) (Fig. 99).
Derivation (Clifford \& Bostock 2007): in honor of Otto Buchtien (1859-1946) German botanist.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Rhizomes elongated. Culms 100-200 cm long. Ligule an eciliate membrane. Leaf-blades linear or lanceolate, $5-10 \mathrm{~cm}$ long, $4-8 \mathrm{~mm}$ wide, coriaceous. Leaf-blade surface glabrous.

Inflorescence. Inflorescence composed of racemes. Racemes 8-16, borne along a central axis, drooping, unilateral, $5-8 \mathrm{~cm}$ long. Rhachis angular, $0.5-1 \mathrm{~mm}$ wide. Spikelet packing distant, 2 -rowed. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, oblong.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets linear or lanceolate, dorsally compressed, planoconvex, $2.5-3 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume margins ciliate. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 3 -veined, acute. Fertile lemma elliptic, $2.5-3 \mathrm{~mm}$ long, indurate, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Western South America. Bolivia.

Paspalum burchellii Munro ex Doell. Mart. Fl. Bras. ii. II. 42. (1877).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: W.J. Burchell 6844, no date, Brazil: Goiás (K; IT: BR, P, US-952238, US-33284, US-2942162 (fragm. ex BR, K, W), W, L).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): in honor or William John Burchell (1781-1863), English traveller and plant collector in southern Africa and Brazil.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Annual, caespitose. Culms erect, $15-20 \mathrm{~cm}$ long. Leaf-sheaths pilose. Ligule an eciliate membrane, $1-2 \mathrm{~mm}$ long, obtuse or acute. Leaf-blades linear or lanceolate, $3.5-8 \mathrm{~cm}$ long, $2-6 \mathrm{~mm}$ wide. Leaf-blade surface pilose, densely hairy, hairy on both sides. Leaf-blade apex acuminate or attenuate.

Inflorescence. Inflorescence composed of racemes. Racemes 2-6, borne along a central axis, arcuate, unilateral, $1-2.5 \mathrm{~cm}$ long. Rhachis broadly winged, foliaceous, folded longitudinally to embrace spikelets. Spikelet packing 2 -rowed. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, oblong, ciliate.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong or obovate, dorsally compressed, planoconvex, 1.2-1.4 mm long, falling entire.

Glumes. Glumes both absent or obscure.
Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 3 -veined, acute. Fertile lemma oblong or obovate, $1.2-1.5 \mathrm{~mm}$ long, indurate, without keel. Lemma surface papillose. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil West Central.
Goias. Distrito Federal, Mato Grosso, Goiás.

Paspalum burmanii Filg., Morr. \& Zuloaga. Novon 11:36 (2001).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Brazil: Goiás: Mun. Niquelândia: $14 ? 5$ 'S, $48 ? 6^{\prime} \mathrm{W}$, planta ereta, margem da estrada entre Niquelâdia e Macedo, cerradáo próximo ?mata ciliar, ca. 10 km N Niquelâdia, estrada para Macedo, 20 maio 1993, Filgueiras 2471 (HT:IBGE; IT: MO, SI, SP, US).

Illustrations (Journals): Novon (11: 38 Fig. 1 (2001)).
Derivation (Clifford \& Bostock 2007): In honor of Alisdair Graham Burman (1942-1992) Englishborn Brazilian botanist.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Rhizomes elongated, woody, scaly. Culms erect, robust, $150-200 \mathrm{~cm}$ long, woody. Culm-internodes terete, thin-walled, $7-18 \mathrm{~cm}$ long, smooth, distally glabrous. Culm-nodes brown, pubescent. Lateral branches lacking. Leaves mostly basal. Leaf-sheaths $15-22 \mathrm{~cm}$ long, longer than adjacent culm internode, pilose, with tubercle-based hairs, outer margin hairy. Ligule an eciliate membrane, $1.8-2.3 \mathrm{~mm}$ long, brown. Collar pubescent. Leaf-blades lanceolate, $30-35 \mathrm{~cm}$ long, $10-$ 12 mm wide. Leaf-blade midrib conspicuous. Leaf-blade surface pubescent, densely hairy, hairy on both sides. Leaf-blade margins ciliate. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Peduncle pubescent above. Racemes 7-11, borne along a central axis, ascending, unilateral, $6-9 \mathrm{~cm}$ long. Central inflorescence axis $10-18 \mathrm{~cm}$ long, flattened, glabrous. Rhachis broadly winged, $2.8-3 \mathrm{~mm}$ wide, glabrous on surface, scaberulous on margins, terminating in a barren extension. Spikelet packing 4 -rowed. Raceme-bases pubescent. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, scabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, acute, $3-4 \mathrm{~mm}$ long, $1.2-1.5 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, with cartilaginous margins (corky), without keels, 3 -veined. Upper glume margins tuberculate, ciliate. Upper glume hairs white, 1-2 mm long. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, $3.2-3.7 \mathrm{~mm}$ long, 1 length of spikelet, membranous, 5 -veined, sulcate, scaberulous, acute. Fertile lemma elliptic, gibbous, $2.8-3 \mathrm{~mm}$ long, $0.6-0.8 \mathrm{~mm}$ wide, cartilaginous, without keel, 5 -veined, more than 3 -veined. Lemma surface pilose (sparsely). Lemma margins involute. Palea gaping, involute, cartilaginous, 2 -veined.

Flower and Fruit. Lodicules 2, 0.2 mm long. Anthers 3, $1.8-2 \mathrm{~mm}$ long. Caryopsis with adherent pericarp, obovoid, $1.3-1.5 \mathrm{~mm}$ long, light brown. Embryo 0.5 length of caryopsis. Hilum punctiform.

Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil West Central.
Goiás.

Paspalum cachimboense Davidse,Morrone, Zuloaga. Novon 11(4): 389 (2001).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Brazil: Mato Grosso: Mun. Colider: estrada Santarém-Cuiab? BR-163, km 762, Serra do Cachimbo a 30 km da cidade de Guarant? 9?5'S, 54?5'W, 19 abr 1983, cerrado, campo aberto, solo pedregoso, M.N. Silva, I.L. Amaral, J. Lima, O.P. Monteiro \& J. Coêlho 24 (HT: MO).

Illustrations (Journals): Novon (11: 390 Fig. 1 (2001)).
Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From Serra do Cachimbo, Brazil.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Annual, herbaceous, or if woody then not a bamboo. Culms geniculately ascending, 20-60 cm long. Culm-internodes $5-11 \mathrm{~cm}$ long, distally glabrous. Culm-nodes brown, glabrous. Lateral branches ample, arising from mid culm and upper culm. Leaf-sheaths 5-8 cm long, mostly shorter than adjacent culm internode, without keel, pilose, with tubercle-based hairs. Ligule an eciliate membrane, $2-3 \mathrm{~mm}$ long. Collar pilose. Leaf-blades $14-19 \mathrm{~cm}$ long, $4-6 \mathrm{~mm}$ wide. Leaf-blade surface pilose, hairy abaxially, with tubercle-based hairs. Leaf-blade margins ciliate. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes, bracteate at branch bases. Peduncle $10-20 \mathrm{~cm}$ long, glabrous. Racemes $1-4$, single or paired or digitate, unilateral, 5-7 cm long. Rhachis broadly winged, 2-3 mm wide, terminating in a barren extension. Spikelet packing abaxial, 2 -rowed. Raceme-bases pubescent. Spikelets solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, acute, $4-4.3 \mathrm{~mm}$ long, 1.1 mm wide, falling entire. Rhachilla internodes elongated below proximal fertile floret. Rhachilla elongation 0.2 mm long.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, chartaceous, without keels, 3 -veined. Upper glume surface pubescent, hairy at base. Upper glume margins ciliate. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 3 -veined, ribbed, tuberculate, setose, hairy above, ciliate on margins, fringed below, bearing hairs $1-2 \mathrm{~mm}$ long, obtuse. Fertile lemma elliptic, gibbous, $2.2-2.5 \mathrm{~mm}$ long, 0.8 mm wide, cartilaginous, pallid, without keel. Lemma surface papillose. Lemma margins involute. Palea involute, cartilaginous.

Flower and Fruit. Lodicules 2, 0.3 mm long. Anthers 3, 1.5 mm long. Caryopsis with adherent pericarp.

Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil West Central.
Mato Grosso.

Paspalum caespitosum Fluegge. Gram. Monog. 161. (1870).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Guyana \& Dominican Rep. $\mathrm{T}:<$ Type of Basionym $>$ : fide TROPICOS and Kew Synonomy Database: ST: P.A. Poiteau, P.J.F. Turpin, 1803, Hispaniola I.: Dominican Republic: Santo Domingo (BM, P, US-2854139 (fragm. ex BM)). ST: Mertens s.n., Guyana: Essequibo (LE; IT: US-951088 (fragm. ex LE)). Chase (1929) indicated this specimen probably does not belong to the type collection of this species.

Illustrations (Books): M.E.Barkworth et al, Flora of North America north of Mexico Vol 25 Poaceae, part 2 (2003) (595), A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (213, Fig. 152).

Derivation (Clifford \& Bostock 2007): L. caespes, grass that has been cut; -osa, abundance. Habit tufted.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose, clumped densely. Culms erect, 35-70 cm long. Culm-internodes distally glabrous. Culm-nodes constricted, glabrous or pubescent. Lateral branches lacking. Leaf-sheaths glabrous on surface. Ligule an eciliate membrane, 0.5 mm long. Leaf-blades flat or involute, $5-25 \mathrm{~cm}$ long, $4-10 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pubescent.

Inflorescence. Inflorescence composed of racemes. Racemes 2-8, borne along a central axis, unilateral, $1-5 \mathrm{~cm}$ long. Rhachis wingless, angular. Spikelet packing 4 -rowed. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, obtuse, $1.6-1.8 \mathrm{~mm}$ long, $0.8-0.9 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, shorter than spikelet, thinner than fertile lemma. Upper glume elliptic, 0.9 length of spikelet, membranous, without keels, 3-5 -veined. Upper glume surface glabrous or puberulous.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 3 -veined, glabrous. Fertile lemma elliptic, 1.61.8 mm long, indurate, pallid, without keel. Lemma surface smooth. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. North America and South America.
Country /Province /State. Southeastern USA and Mexico. Alabama, Florida. Central Mexico, Northeast Mexico, Gulf (Mexico), Southeast Mexico. Mesoamerica and Caribbean. Belize, Guatemala, Honduras. Bahamas, Bermuda, Cayman Is, Cuba, Dominican Republic, Haiti, Jamaica, Puerto Rico.

Puebla. Queretaro, Tamaulipas. Veracruz. Campeche, Chiapas, Quintana Roo, Tabasco, Yucatan.

Paspalum calliferum S.Denham. Ann. Missouri Bot. Gard. 92(4): 501 (2005).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online (Thrasya robusta), W.D.Clayton \& K.Harman, GrassBase (2008) and online (Thrasya robusta).

Basionym or Replaced Name: Thrasya robusta Hitchcock \& Chase, Contrib. US. Nat. Herb. xviii. 297 (1917).

Illustrations (Books): W.Burger, Flora Costaricensis 15, Gramineae: Fieldiana Botany New Series 4 (1980) (566, Fig 213 as Thrasya robusta).

Derivation (Clifford \& Bostock 2007): L. callus, hard skin of an animal; fero, carry or bear. Base of spikelet callus-like.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, robust, 100-200 cm long. Culmnodes bearded. Leaf-sheaths keeled, pubescent, outer margin hairy. Ligule an eciliate membrane, 1 mm long, truncate. Leaf-blades linear or lanceolate, flat or conduplicate, $15-30 \mathrm{~cm}$ long, $4-15 \mathrm{~mm}$ wide. Leafblade surface scaberulous, rough abaxially, puberulous, hairy adaxially. Leaf-blade margins tuberculateciliate.

Inflorescence. Inflorescence composed of racemes, terminal and axillary. Racemes 1(-2), single or paired, arcuate, unilateral, $8-30 \mathrm{~cm}$ long. Rhachis broadly winged, folded longitudinally to embrace spikelets, 2 mm wide, glabrous on surface, glabrous on margins, terminating in a barren extension, extension flattened. Spikelet packing alternately adaxial and abaxial, regular, 1 -rowed. Spikelets pectinate, in pairs. Fertile spikelets sessile and pedicelled, 2 in the cluster. Pedicels present, fused to internode, united wholly.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or oblong, dorsally compressed, 3.2-4 mm long, 1.2 mm wide, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.4(-2) \mathrm{mm}$ long, $0.1(-0.6)$ length of spikelet, hyaline, without keels, $0(-1)$-veined. Lower glume lateral veins absent. Lower glume apex acute. Upper glume elliptic, 3.2-4 mm long, 1 length of spikelet, chartaceous, without keels, 5 -veined. Upper glume surface pilose. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret elliptic or oblong, 1 length of spikelet, coriaceous, sulcate or readily splitting into two halves, ciliolate on margins, acute. Palea of lower sterile floret becoming indurate on flanks at maturity. Fertile lemma elliptic, 3.1 mm long, coriaceous, without keel. Lemma surface papillose or striate. Lemma margins involute. Lemma apex acute. Palea coriaceous.

Flower and Fruit. Lodicules 2, fleshy, truncate. Anthers 3.
Distribution (TDWG). Continent. South America.
Country /Province/State. Mesoamerica, Caribbean, Northern South America, Western South America. Costa Rica, Panama. French Guiana, Surinam, Venezuela. Colombia.

Paspalum campinarum T.S. Filgueiras \& G. Davidse. Novon, 5(2): 146 (1996).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: C.E. Calderón, O.P.Monteiro \& J.Guedes 2715, 29 Jun 1979, Brazil: Amazonas: Transamazon Highway, 53 km W of Aripuaña river, Campina Region, common but not abundant in open campina of white sandy soil (INPA; IT: MO-3581307, US-3076496).

Illustrations (Journals): Novon (5:147, Fig. 1 (1995)).
Derivation (Clifford \& Bostock 2007): L. Possessive plural of the Portuguese campina treated as a feminine noun. Of the campina (grasslands) of Amazonas, Brazil.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rhizomes short, knotty. Butt sheaths pubescent. Culms erect or geniculately ascending, 40-75 cm long, 6-8 -noded. Culm-internodes distally glabrous or pubescent. Culm-nodes glabrous or pubescent. Lateral branches lacking. Leaves cauline. Leaf-sheaths glabrous on surface, outer margin hairy. Leaf-sheath auricles erect, $0.5-1.5 \mathrm{~mm}$ long. Ligule an eciliate membrane, $0.2-0.3 \mathrm{~mm}$ long. Leaf-blade base cordate. Leaf-blades lanceolate, $4-9.9 \mathrm{~cm}$ long, $9-19 \mathrm{~mm}$ wide. Leaf-blade venation distinct. Leaf-blade surface glabrous. Leaf-blade margins scabrous, ciliate, hairy at base.

Inflorescence. Inflorescence composed of racemes, terminal and axillary. Racemes 5-25, borne along a central axis, unilateral, $1.5-6.5 \mathrm{~cm}$ long. Central inflorescence axis $9-12 \mathrm{~cm}$ long. Rhachis angular, $0.3-$ 0.6 mm wide, with scattered hairs. Rhachis hairs $4-8 \mathrm{~mm}$ long. Spikelet packing 4 -rowed. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, unequal, $0.5-1 \mathrm{~mm}$ long, tip discoid.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, acute, $2.3-2.9 \mathrm{~mm}$ long, $1-1.2 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, 0.6-0.8 length of spikelet, membranous, light brown, without keels, 3 -veined. Upper glume surface pubescent. Upper glume margins ciliate.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, light brown, 3 -veined, glabrous, ciliate on margins. Fertile lemma elliptic, 2.3-2.9 mm long, indurate, pallid, without keel, 5 -veined, more than 3-veined. Lemma surface striate, with distinct germination flap. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 2-2.2 mm long. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil North.
Amazonas.

Paspalum campylostachyum (Hack.) S. Denham. Ann. Missouri Bot. Gard. 92(4): 489 (2005).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online (as Thrasya), W.D.Clayton \& K.Harman, GrassBase (2008) and online (as Thrasya).

Basionym or Replaced Name: Thrasya campylostachya (Hack.) Chase, Proc. Biol. Soc. Washington, xxiv. 115 (1911).

Illustrations (Books): S.A.Renvoize, Gramineas de Bolivia (1998) (510, Fig 114 as Thrasya), W.Burger, Flora Costaricensis 15, Gramineae: Fieldiana Botany New Series 4 (1980) (566, Fig 213 as Thrasya).

Derivation (Clifford \& Bostock 2007): Gk kampylos, curve; stachys, spike as of an ear of wheat. Racemes curved.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect or geniculately ascending or decumbent, $50-90 \mathrm{~cm}$ long. Culm-nodes bearded. Leaf-sheaths keeled, glabrous on surface to pilose, with simple hairs or tubercle-based hairs, outer margin glabrous or hairy. Ligule an eciliate membrane, 0.8 mm long. Leaf-blades $6-20 \mathrm{~cm}$ long, $3-10 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pubescent, hairy on both sides. Leaf-blade margins glabrous or ciliate.

Inflorescence. Inflorescence composed of racemes. Peduncle glabrous or pilose above. Racemes 1, single, arcuate, unilateral, $4-10 \mathrm{~cm}$ long. Rhachis narrowly winged, folded longitudinally to embrace spikelets, 2 mm wide, glabrous on surface, glabrous on margins or ciliate on margins, terminating in a barren extension, extension flattened. Spikelet packing alternately adaxial and abaxial, regular, 1 -rowed. Spikelets pectinate, in pairs. Fertile spikelets sessile and pedicelled, 2 in the cluster. Pedicels present, fused to internode, united wholly.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, 2.7-3 mm long, 0.8 mm wide, falling entire.

Glumes. Glumes dissimilar, shorter than spikelet, thinner than fertile lemma. Lower glume oblate, 0.3 mm long, $0.25-0.5$ length of spikelet, hyaline, without keels, 1 -veined. Lower glume lateral veins absent. Lower glume apex truncate. Upper glume elliptic, 0.66 length of spikelet, chartaceous, without keels, 5 veined. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, coriaceous, 5 -veined, without grooves or sulcate, acute. Palea of lower sterile floret becoming indurate on flanks at maturity. Fertile lemma elliptic, 2.5 mm long, coriaceous, without keel. Lemma surface papillose or striate. Lemma margins involute, eciliate or ciliolate. Lemma apex acute. Palea coriaceous.

Flower and Fruit. Lodicules 2, fleshy, truncate. Anthers 3.
Distribution (TDWG). Continent. North America, South America.
Country /Province /State. Mexico. Central Mexico, Southwest Mexico, Southeast Mexico. Mesoamerica, Northern South America, Western South America. Belize, Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua, Panama. Venezuela. Bolivia, Colombia.

Puebla. Oaxaca. Chiapas, Tabasco.

Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online.

Basionym or Replaced Name: Panicum canarae Steud., Syn. Pl. Glumac 1: 58 (1853). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Paspalum costatum Hochst.", "Provincia Canara Ind. or.", Hochst. Hrbr. Hohenack. nr. 635.

Illustrations: None found.
Images: G.G.Potgar, C.B.Salunkhe \& S.R.Yadav, Grasses of Maharashtra (2012)
(Pl. $24 \& 25$ ).
Derivation (Clifford \& Bostock 2007): From Canara, a region in Karnataka State, India.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Annual. Culms decumbent or prostrate, $10-40 \mathrm{~cm}$ long. Culm-nodes bearded. Leaf-sheaths pilose, with tubercle-based hairs. Ligule an eciliate membrane, 0.5 mm long. Leafblades elliptic, $1-5 \mathrm{~cm}$ long, $2-10 \mathrm{~mm}$ wide. Leaf-blade surface pilose, densely hairy, with tubercle-based hairs. Leaf-blade apex acute or acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes 3-15, digitate, spreading, unilateral, 0.52 cm long. Rhachis narrowly winged, with sharp-edged midrib, 0.5 mm wide, tuberculate on margins, ciliate on margins. Spikelet packing abaxial, regular, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, oblong, $0.5-1 \mathrm{~mm}$ long, setose.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or orbicular, dorsally compressed, planoconvex, obtuse, $1-1.25 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume obovate, 1 length of spikelet, chartaceous, without keels, 3-5 -veined. Upper glume margins tuberculate, eciliate or ciliolate. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, chartaceous, 5 -veined, eciliate on margins or ciliolate on margins, acute. Fertile lemma ovate or orbicular, gibbous, $1-1.25 \mathrm{~mm}$ long, indurate, without keel, 3-5 veined, $0-3$-veined or more than 3 -veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers $3,0.3-0.5 \mathrm{~mm}$ long.

Paspalum carajasense S. Denham. Ann. Missouri Bot. Gard. 92(4): 491 (2005).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online (as Thrasya longiligulata), W.D.Clayton \& K.Harman, GrassBase (2008) and online (as Thrasya longiligulata).

Basionym or Replaced Name: Thrasya longiligulata M.N.C. Bastos \& A.G. Burman, Bol. Mus. Paraense Emilio Goeldi, Bot., 4(2): 236 (1988).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From Serra dos Carajas, Brazil.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect or geniculately ascending, 30-60 cm long, without nodal roots or rooting from lower nodes. Culm-nodes glabrous or pubescent. Lateral branches ample. Leaf-sheaths mostly shorter than adjacent culm internode, keeled. Ligule an eciliate membrane, $1.5-2 \mathrm{~mm}$ long, erose. Leaf-blades $8.5-18 \mathrm{~cm}$ long, $2.5-5.5 \mathrm{~mm}$ wide. Leaf-blade surface pubescent, hairy adaxially. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes, terminal and axillary. Racemes 1, single, arcuate, unilateral, $2.4-6 \mathrm{~cm}$ long. Rhachis narrowly winged, folded longitudinally to embrace spikelets, 2 mm wide, glabrous on surface, ciliate on margins, terminating in a barren extension, extension flattened. Rhachis hairs 0.5 mm long. Spikelet packing alternately adaxial and abaxial, regular, 1 -rowed. Spikelets pectinate, in pairs. Fertile spikelets sessile and pedicelled, 2 in the cluster. Pedicels present, fused to internode, united wholly, pubescent.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, acute, 2-2.5 mm long, 0.8 mm wide, falling entire.

Glumes. Glumes dissimilar, shorter than spikelet, thinner than fertile lemma. Lower glume oblate, 0.1 mm long, 0.05 length of spikelet, membranous, without keels, 0 -veined. Lower glume lateral veins absent. Lower glume apex truncate. Upper glume elliptic, 0.9 length of spikelet, chartaceous, without keels, 5 veined. Upper glume surface asperulous. Upper glume apex dentate, 2 -fid.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret oblong, 1 length of spikelet, chartaceous, sulcate and readily splitting into two halves, glabrous, dentate, 2 -fid. Palea of lower sterile floret becoming indurate on flanks at maturity, 1 length of lemma. Fertile lemma elliptic, 1.5 mm long, coriaceous, without keel. Lemma surface papillose. Lemma margins involute. Lemma apex acute, without ornament. Palea coriaceous.

Flower and Fruit. Caryopsis ellipsoid. Embryo 0.4-0.5 length of caryopsis. Hilum linear.
Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil North.
Pará.

Paspalum chaffanjonii Maury. Morot, Journ. de Bot. iii. 159 fig. 5. (1889).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Bolivia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: IT: J. Chaffanjon 291, no date, Venezuela: Bolívar, Boca del Pao (US-2942173 (fragm. ex P \& photo)).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): in honor of Jean Chaffanjon (1854-1913).
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Rhizomes short, scaly, hairy. Culms 70-80 cm long. Leafsheaths pilose, outer margin hairy. Leaf-sheath oral hairs ciliate. Ligule an eciliate membrane. Leaf-blades $20-25 \mathrm{~cm}$ long, $5-6 \mathrm{~mm}$ wide. Leaf-blade surface pilose. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes 2-5, paired or digitate, unilateral, 4-8 cm long. Central inflorescence axis $0-1 \mathrm{~cm}$ long. Rhachis angular. Spikelet packing abaxial, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, oblong.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate, dorsally compressed, plano-convex, acute, $2.5-3 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume margins ciliate. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 3 -veined, ciliate on margins, acute. Fertile lemma ovate, 2-2.5 mm long, indurate, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province/State. Northern South America. Venezuela.

Paspalum chaseanum Parodi. Physis, xi. 129 (1932).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Argentina. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: L.R. Parodi 8391, 23 Jan 1928, Argentina: Formosa: Las Lomitas, km 297 FC de Formosa, 24?0'S, 60?0'W (BAA; IT: K, SI, US-1385806).

Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 1, Aristidoideae a Pharoideae (2012) (386).

Derivation (Clifford \& Bostock 2007): L. -anum, indicating connection. In honor of Mary Agnes Merrill Chase (1869-1963) United States agrostologist.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Basal innovations intravaginal. Culms erect, 70-150 cm long, 5-6 mm diam., 5-6 -noded. Culm-nodes brown, glabrous. Leaf-sheaths longer than adjacent culm internode, hispid. Ligule an eciliate membrane, 2 mm long. Leaf-blades $15-35 \mathrm{~cm}$ long, $8-10 \mathrm{~mm}$ wide. Leaf-blade surface hirsute, hairy on both sides, with tubercle-based hairs. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes 6-25, borne along a central axis, unilateral, 3-13 cm long. Central inflorescence axis $10-15 \mathrm{~cm}$ long. Rhachis angular, glabrous on margins. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, fused to each other, united below, clavate, subequal, 1 mm long, glabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, 2-2.5 mm long, 1.5 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, dark green, without keels, 3 -veined. Upper glume surface papillose, pubescent. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, dark green, 3 -veined, papillose, pubescent, acute. Fertile lemma elliptic, $2-2.5 \mathrm{~mm}$ long, indurate, dark brown, shiny, without keel. Lemma surface punctate. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers $3,1 \mathrm{~mm}$ long. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province/State. Western South America, Southern South America. Bolivia. Paraguay. Formosa.

Paspalum chiapense Sánchez-Ken. Revista Mexicana de Biodiversidad 81: 629-647 (2010).
TYPE from Mexico. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Chiapas: Yanchilín, a 20 km al N de San Cristóbal de las Casas, O. Téllez y W. Elisens 4614 (holotype: MEXU; isotype: MEXU).

Illustrations (Journals): Revista Mexicana de Biodiversidad (81: 631, Fig. 1 (2010)).
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Rhizomes short. Culms erect or geniculately ascending, 85 cm long. Culm-internodes distally glabrous. Culm-nodes brown. Lateral branches sparse, arising from upper culm. Leaf-sheaths longer than adjacent culm internode, without keel or keeled, glabrous on surface
or pubescent, outer margin hairy. Leaf-sheath oral hairs ciliate. Ligule an eciliate membrane, $1-1.3 \mathrm{~mm}$ long. Collar pubescent. Leaf-blades lanceolate, $10-15 \mathrm{~cm}$ long, $6-8.3 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or puberulous. Leaf-blade margins tuberculate-ciliate. Leaf-blade apex attenuate.

Inflorescence. Inflorescence composed of racemes, terminal and axillary, with 1-2 peduncles per sheath. Racemes $1-3$, single or paired or borne along a central axis, unilateral, 3-3.7 cm long. Rhachis narrowly winged, flattened, $0.7-1 \mathrm{~mm}$ wide, smooth on surface or scabrous on surface, scabrous on margins. Spikelet packing irregular, 4 -rowed. Raceme-bases brief, pubescent. Spikelets in pairs. Fertile spikelets pedicelled, 2 in the cluster. Pedicels present, subequal, $0.5-1.4 \mathrm{~mm}$ long, scabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or oblong, dorsally compressed, planoconvex, obtuse or subacute, $2.6-2.8 \mathrm{~mm}$ long, $1.1-1.3 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure or two, shorter than spikelet, thinner than fertile lemma. Lower glume linear (when present), $0.5-1 \mathrm{~mm}$ long, $0-1$-veined. Lower glume lateral veins absent. Upper glume ovate, $2.5-2.6 \mathrm{~mm}$ long, 0.9 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface smooth, glabrous.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, $1.4-1.5 \mathrm{~mm}$ long, 1 length of spikelet, membranous, 5 -veined. Fertile lemma ovate, $2.3-2.4 \mathrm{~mm}$ long, indurate, pallid, without keel. Lemma surface papillose. Lemma margins involute. Palea involute, 2-2.1 mm long, indurate.

Flower and Fruit. Lodicules 2, 0.25-0.3 mm long. Anthers 3, $0.8-0.9 \mathrm{~mm}$ long.
Distribution (TDWG). Continent. North America.
Country /Province /State. Mexico. Southeast Mexico.
Chiapas.

## Paspalum cinerascens (Doell) A.G.Burman \& M.N.C.Bastos. Bol. Mus. Paraense Emilio Goeldi, Bot.,

 4(2): 241 (1988).Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. Basionym or Replaced Name: Panicum cinerascens Döll, Fl. Bras. 2(2): 189 (1877). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: LT: P. Lund s.n., no date, Brazil: Minas Gerais (KR; ILT: US-2942145 (fragm. ex KR)). LT designated (as holotype) by Judziewicz, Fl. Guianas, Ser. A, Phanerogams, 187. Poaceae: 631 (1990).

Recent Synonyms: Thrasya cinerascens (Doell.) Judz., Fl. Guianas, Ser. A, 8(187): 631: (1990).
Illustrations (Journals): Ann. Missouri Bot. Gard. (92: 492: Fig. 13 (2005)).
Derivation (Clifford \& Bostock 2007): L. cinerasco, become ashen. Leaf-blades glaucous.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms 100-300 cm long, 2-3 mm diam. Culmnodes brown, pubescent. Leaf-sheaths hirsute or hispid. Ligule an eciliate membrane, 2 mm long. Leafblades $20-30 \mathrm{~cm}$ long, 12 mm wide. Leaf-blade surface glabrous or pilose, sparsely hairy, with tuberclebased hairs.

Inflorescence. Inflorescence composed of racemes, with 1-2 peduncles per sheath. Peduncle 5-40 cm long, glabrous. Racemes $1-2(-5)$, single or paired or digitate, unilateral, $15-25 \mathrm{~cm}$ long. Rhachis narrowly winged, $1-1.7 \mathrm{~mm}$ wide, with scattered hairs or glabrous on surface, terminating in a barren extension, extension flattened. Spikelet packing alternately adaxial and abaxial, regular, 2 -rowed. Spikelets in pairs. Fertile spikelets pedicelled, 2 in the cluster. Pedicels present, fused to internode, united wholly, oblong, $0.5-1 \mathrm{~mm}$ long, pubescent.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or ovate, dorsally compressed, plano-convex, $3.3-4.2 \mathrm{~mm}$ long, $1.8-2.5 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes dissimilar, shorter than spikelet, thinner than fertile lemma. Lower glume oblate, 1.52.5 mm long (on short pedicel) or $0.7-1.2 \mathrm{~mm}$ long (on long pedicel), $0.2-0.6$ length of spikelet, hyaline, without keels, 1 -veined. Lower glume lateral veins absent. Lower glume apex obtuse. Upper glume elliptic,
0.9 length of spikelet, membranous, without keels, 7-9 -veined. Upper glume lateral veins with cross-veins, excurrent. Upper glume apex erose (splitting along veins at maturity).

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, coriaceous, 5 -veined, with cross-veins, acute. Palea of lower sterile floret 1 length of lemma. Fertile lemma ovate, 3-4 mm long, coriaceous, pallid and purple, tipped with last colour, without keel. Lemma surface granulose. Lemma margins involute. Lemma apex acute. Palea coriaceous.

Distribution (TDWG). Continent. South America.
Country /Province /State. Northern South America, Brazil, and Southern South America. Brazil West Central, Brazil Northeast, Brazil North, Brazil Southeast, Brazil South.

Paspalum clandestinum Swallen. Phytologia, xiv. 386 (1967).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: J.R. Swallen 4064, 20-25 Mar 1934, Brazil: Maranhão, Carolina to San Antonio de Balsas (US-1613861).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. hidden. The inflorescence is enclosed or partially enclosed in the upper leaf-sheath.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Annual. Culms erect or geniculately ascending, 13-28 cm long. Culm-internodes distally glabrous. Leaf-sheaths longer than adjacent culm internode, glabrous on surface, outer margin hairy. Ligule an eciliate membrane. Leaf-blades erect or ascending, 3-7 cm long, 2-4 mm wide. Leaf-blade surface hirsute.

Inflorescence. Inflorescence composed of racemes, subtended by an inflated leaf-sheath, enclosed. Racemes 1, single, arcuate, unilateral, 10 cm long. Rhachis 1 mm wide, scaberulous on margins. Spikelet packing abaxial. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, plano-convex, acute, 3 mm long, 1.5 mm wide, falling entire.

Glumes. Glumes two, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, 0.5 mm long, 0.15 length of spikelet, membranous. Upper glume elliptic, 1 length of spikelet, membranous, midgreen or light brown (spotted), without keels, 3 -veined. Upper glume surface pubescent.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, mid-green or light brown (spotted), 3 -veined, with unevenly spaced veins (near margins), pubescent. Fertile lemma elliptic, 2.5 mm long, indurate, pallid, shiny, without keel. Lemma surface smooth. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.

Paspalum clavuliferum Wright. Sauv. Fl. Cub. 195. (1871).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Cuba. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Wright 3444, Cuba (GH; IT: B, NY-71066, NY-71067, US-2942143).

Illustrations (Books): A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (223, Fig. 170), S.A.Renvoize, The Grasses of Bahia, 1984 (230, Fig. 85), W.Burger, Flora Costaricensis 15, Gramineae: Fieldiana Botany New Series 4 (1980) (410, Fig 149).

Derivation (Clifford \& Bostock 2007): L. clava, club; -ula, diminutive; fero, bear. The glumes and sterile lemma bear capitellate hairs.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Annual, caespitose. Culms erect, $10-30 \mathrm{~cm}$ long, $0.5-1 \mathrm{~mm}$ diam. Culm-internodes thin-walled, distally glabrous. Culm-nodes glabrous. Lateral branches sparse. Leaves mostly basal. Leaf-sheaths pilose, with tubercle-based hairs, outer margin hairy. Ligule an eciliate membrane, $0.7-1 \mathrm{~mm}$ long, brown. Leaf-blades $3-9 \mathrm{~cm}$ long, $1.5-3 \mathrm{~mm}$ wide. Leaf-blade midrib prominent beneath. Leaf-blade surface pilose, with tubercle-based hairs. Leaf-blade margins ciliate.

Inflorescence. Inflorescence composed of racemes, terminal and axillary. Racemes 1-2, single or paired, arcuate, unilateral, $1-4 \mathrm{~cm}$ long. Rhachis wingless, angular, $0.4-0.5 \mathrm{~mm}$ wide. Spikelet packing 4 rowed. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, $0.2-0.5 \mathrm{~mm}$ long, puberulous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, $1.2-1.4 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume surface pubescent, with capitate hairs.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 3 -veined, eciliate on margins or ciliate on margins (capitate hairs). Fertile lemma obovate, 1.2-1.4 mm long, indurate, pallid, without keel. Lemma surface striate. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3, $0.2-0.3 \mathrm{~mm}$ long, brown. Caryopsis with adherent pericarp, obovoid, 0.8 mm long.

Swallen 7790, 19 Dec 1945, Brazil: Rio Grande do Sul: Passo Fundo, Fazenda da Brigada, margin of banhado, wet ground,, sheaths compressed, foliage light bluish green, culms ascending at base, blades erect, rather stiff (US-1961358; IT: MO-0490984).

Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 1, Aristidoideae a Pharoideae (2012) (388).

Derivation (Clifford \& Bostock 2007): L. comprimo, squeeze together; folium, leaf. Leaf-sheaths strongly compressed.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms 38-57 cm long. Culm-nodes glabrous. Leaf-sheaths glabrous on surface. Ligule an eciliate membrane, 2 mm long. Leaf-blades conduplicate, 1730 cm long, 2 mm wide. Leaf-blade surface glabrous.

Inflorescence. Inflorescence composed of racemes. Racemes 3-4, borne along a central axis, unilateral, $3-6.5 \mathrm{~cm}$ long. Rhachis wingless, angular, 0.5 mm wide, glabrous on surface. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, glabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, plano-convex, obtuse, 2.8 mm long, 1.8 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface glabrous.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, wrinkled, glabrous. Fertile lemma ovate, 2.8 mm long, 1.8 mm wide, indurate, dark brown, without keel. Lemma surface smooth. Lemma margins involute, ciliolate, hairy above. Palea involute, indurate.

Flower and Fruit. $n=10$ ( 1 ref TROPICOS). $2 n=40$ ( 1 ref TROPICOS).
Distribution (TDWG). Continent. South America.
Country /Province /State. Western South America, Brazil, Southern South America. Bolivia. Brazil West Central, Brazil Southeast, Brazil South. Paraguay.

Distrito Federal, Mato Grosso do Sul. Sao Paulo. Paraná, Rio Grande do Sul, Santa Catarina. Misiones.

Paspalum conduplicatum T.S. do Canto-Dorow, J.F.M. Valls \& H.M. Longhi-Wa. Bradea, 6(40): 333 (1995).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Barreto s.n., 17 Nov 1992, Brazil. Rio Grande do Sul: São Gabriel, Granja Sao Jose (ICN-96705; IT: CEN, ICN-103626, SMDB).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. conduplico, fold. Leaf-sheaths strongly keeled.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Rhizomes short. Basal innovations intravaginal. Culms prostrate, $9-40 \mathrm{~cm}$ long, 2-3 -noded. Culm-internodes distally glabrous. Culm-nodes brown, glabrous. Leaves mostly basal. Leaf-sheaths $3.5-10.3 \mathrm{~cm}$ long, striately veined, pubescent. Leaf-sheath oral hairs ciliate, 2.5 mm long. Ligule an eciliate membrane, $0.5-1 \mathrm{~mm}$ long. Leaf-blades ascending, linear or lanceolate, $1.8-11 \mathrm{~cm}$ long, $1.5-4 \mathrm{~mm}$ wide. Leaf-blade venation indistinct. Leaf-blade surface scabrous, rough abaxially. Leaf-blade apex acute.

Inflorescence. Inflorescence composed of racemes, without bracts or bracteate at branch bases. Racemes 2(-3), paired, ascending, unilateral, $2.9-6.2 \mathrm{~cm}$ long. Rhachis wingless, angular, 1 mm wide, glabrous on surface, scaberulous on margins. Spikelet packing abaxial, regular, 2 -rowed. Raceme-bases pubescent. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate or ovate, dorsally compressed, planoconvex, obtuse, 2.3-2.9 mm long, $1.9-2.1 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, $2.3-2.9 \mathrm{~mm}$ long, 1 length of spikelet, without keels, 3 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, $2.1-2.8 \mathrm{~mm}$ long, 1 length of spikelet, 3 -veined. Fertile lemma obovate, gibbous, $1.9-2.5 \mathrm{~mm}$ long, $1.5-1.9 \mathrm{~mm}$ wide, indurate, dull, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, $1.7-2.3 \mathrm{~mm}$ long, indurate.

Flower and Fruit. Lodicules 2, obtuse. Anthers $3,0.9 \mathrm{~mm}$ long, red. Caryopsis with adherent pericarp, ovoid, $1.7-2.3 \mathrm{~mm}$ long. Hilum punctiform.

Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil South.
Paraná, Rio Grande do Sul, Santa Catarina.

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Princeps Sereniss. Maximilian Neowidens, Brazil (B; IT: US-2942135 (fragm. ex B)).

Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 1, Aristidoideae a Pharoideae (2012) (389), M.E.Barkworth et al, Flora of North America north of Mexico Vol 25 Poaceae, part 2 (2003) (583), S.A.Renvoize, The Grasses of Bahia, 1984 (216, Fig. 80), L.B. Smith, D.C. Wasshausen, R.M. Klein Flora Illustrada Catarinensis Gramineas (1981-1982) (983, Fig 194).

Derivation (Clifford \& Bostock 2007): L. conspergo, scatter. Glumes in part hairy and in part glabrous.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths herbaceous. Culms robust, 100200 cm long. Culm-nodes glabrous. Lateral branches lacking. Leaf-sheaths striately veined, glabrous on surface or pilose, with tubercle-based hairs, outer margin hairy. Ligule an eciliate membrane, $1.5-2 \mathrm{~mm}$ long. Leaf-blade base broadly rounded. Leaf-blades $30-75 \mathrm{~cm}$ long, $10-25 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pilose, hairy adaxially, with tubercle-based hairs.

Inflorescence. Inflorescence composed of racemes. Racemes 6-12, borne along a central axis, unilateral, $7-15 \mathrm{~cm}$ long. Central inflorescence axis $8-18 \mathrm{~cm}$ long. Rhachis wingless, angular, $0.7-1.2 \mathrm{~mm}$ wide, scaberulous on margins, glabrous on margins. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, subacute, $2.7-3 \mathrm{~mm}$ long, $1.6-1.8 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, light brown to purple, without keels, 5 -veined. Upper glume surface pubescent. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, light brown or purple, 5 -veined, concave across back, glabrous or pubescent, acute. Fertile lemma elliptic, 2.5-2.7 mm long, indurate, dark brown, without keel. Lemma surface striate. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.

Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From Barra do Corda, Brazil.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Annual. Culms erect or geniculately ascending, 25-50 cm long. Culm-internodes distally glabrous. Lateral branches ample, arising from lower culm. Leaf-sheaths mostly shorter than adjacent culm internode, hispid, with tubercle-based hairs. Ligule an eciliate membrane, 3 mm long. Leaf-blades $8-25 \mathrm{~cm}$ long, $4-6 \mathrm{~mm}$ wide. Leaf-blade surface pilose, sparsely hairy or moderately hairy or densely hairy, with tubercle-based hairs. Leaf-blade margins scabrous.

Inflorescence. Inflorescence composed of racemes. Racemes 2, paired, unilateral, 3.5-8 cm long. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, unequal, 0.5 mm long or $1-1.3 \mathrm{~mm}$ long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, plano-convex, 3-3.1 mm long, 2.3 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface pilose.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, mid-green or light brown (spotted), pilose. Fertile lemma elliptic, gibbous, 3 mm long, indurate, dark brown, shiny, without keel. Lemma surface striate. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province/State. Brazil. Brazil West Central, Brazil Northeast.
Mato Grosso, Goiás. Maranhão, Piaui.
Paspalum cordatum Hack. Arkiv Bot. Stockh. ix. No. 15, 5 (1910).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: P. Dusén 3248, 7 Jan 1904, Brazil: Paran? Ponto Grossa, Rio Tibagy (W; IT: G, US-2942131 (fragm. ex W)).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. cordus, heart; -ata, possessing. Bases of leaf-blades cordate. Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Culms erect, 100 cm long, 5 -noded. Culm-nodes glabrous. Leaf-sheaths longer than adjacent culm internode, pubescent. Ligule an eciliate membrane, truncate. Leafblades $30-40 \mathrm{~cm}$ long, $4-8 \mathrm{~mm}$ wide, stiff. Leaf-blade midrib conspicuous. Leaf-blade surface pubescent, hairy on both sides. Leaf-blade apex acute.

Inflorescence. Inflorescence composed of racemes. Racemes 4-6, digitate, unilateral, 10-12 cm long. Central inflorescence axis $0.5-1 \mathrm{~cm}$ long. Rhachis narrowly winged, angular, 1.5 mm wide, terminating in a barren extension, extension flattened or subulate, extension $3-5 \mathrm{~mm}$ long. Spikelet packing abaxial, crowded, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, oblong.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, with cordate base, dorsally compressed, plano-convex, obtuse, 5 mm long, 3 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, auriculate at base, 1 length of spikelet, membranous, without keels, winged on margins, 7 -veined. Upper glume surface glabrous. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret oblong, 0.75 length of spikelet, membranous, 3 -veined, tuberculate on margins, setose on margins, obtuse. Fertile lemma oblong, 3.5-4 mm long, indurate, pallid, without keel. Lemma margins involute, ciliolate, hairy above. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1.8 mm long. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Western South America, Brazil. Colombia. Brazil West Central, Brazil North, Brazil Southeast, Brazil South.

Sao Paulo Parana. Goiás, Mato Grosso do Sul. Amazonas. Minas Gerais, Sao Paulo. Paraná.

Derivation (Clifford \& Bostock 2007): Gk. koryphe, top of the head; L. -eum, resembling. Culms tall, freely branching from upper nodes.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rootstock evident. Butt sheaths pilose. Culms erect or rambling, $65-400 \mathrm{~cm}$ long, $2-4 \mathrm{~mm}$ diam. Culm-internodes thin-walled, distally glabrous or pubescent. Lateral branches ample. Leaf-sheaths keeled, pubescent, outer margin hairy. Leaf-sheath oral hairs bearded. Ligule an eciliate membrane, $1-4.5 \mathrm{~mm}$ long, brown. Leaf-blade base simple or cordate. Leaf-blades $30-50 \mathrm{~cm}$ long, $10-13 \mathrm{~mm}$ wide. Leaf-blade midrib conspicuous. Leaf-blade surface glabrous or puberulous. Leaf-blade margins scabrous, glabrous or tuberculate-ciliate.

Inflorescence. Inflorescence composed of racemes. Racemes numerous, 15-44, borne along a central axis, simply spaced or in several whorls, unilateral, $5-13 \mathrm{~cm}$ long. Central inflorescence axis $3-20 \mathrm{~cm}$ long. Rhachis wingless, angular, 0.5 mm wide. Spikelet packing 4 -rowed. Raceme-bases brief, hirsute. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, acute, 2-2.5 mm long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume obovate, 1 length of spikelet, membranous, dark brown, without keels, 3 -veined. Upper glume surface pubescent, with tubercle-based hairs.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, obovate, 1 length of spikelet, membranous, 3 -veined, glabrous or puberulous. Fertile lemma ovate, $1.8-2.3 \mathrm{~mm}$ long, indurate, pallid, without keel. Lemma surface striate. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1.2-1.4 mm long, purple. Caryopsis with adherent pericarp.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect. Lateral branches lacking. Leaves cauline. Ligule an eciliate membrane. Leaf-blades 4-25 cm long, 2-4 mm wide.

Inflorescence. Inflorescence composed of racemes. Racemes 1, single, unilateral, $5-15 \mathrm{~cm}$ long. Rhachis broadly winged, folded longitudinally to embrace spikelets, 3 mm wide, ciliate on margins, terminating in a barren extension, extension flattened. Spikelet packing alternately adaxial and abaxial, regular, 1 -rowed. Spikelets in pairs. Fertile spikelets sessile and pedicelled, 2 in the cluster. Pedicels present, fused to internode, united wholly.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the
lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, 3 mm long, falling entire.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume lanceolate, 0.33 length of spikelet, membranous, without keels. Lower glume surface pubescent or pilose. Upper glume lanceolate, 1 length of spikelet, membranous, without keels. Upper glume surface pubescent or pilose. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, coriaceous, pubescent or pilose. Fertile lemma elliptic, 3 mm long, coriaceous, without keel. Lemma margins involute. Lemma apex acute. Palea coriaceous.

Distribution (TDWG). Continent. South America.
Country /Province /State. Western South America. Bolivia.

Paspalum crustarium Swallen. Phytologia, xiv. 380 (1967).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: J.R. Swallen 3985, 20-25 Mar 1934, Brazil: Maranhão (US-1613877).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. crusta, anything baked; -arium, pertaining to. Anthoecia dark-brown.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Annual. Culms erect, $25-35 \mathrm{~cm}$ long. Culm-internodes distally glabrous. Leaf-sheaths longer than adjacent culm internode, glabrous on surface, outer margin glabrous or hairy. Ligule an eciliate membrane. Leaf-blades $6-12 \mathrm{~cm}$ long, $2.5-4 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pubescent. Leaf-blade margins scabrous. Leaf-blade apex attenuate, filiform.

Inflorescence. Inflorescence composed of racemes. Racemes 2-4, paired or borne along a central axis, unilateral, $2-4 \mathrm{~cm}$ long. Rhachis angular, 0.7 mm wide, glabrous on surface. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, oblong.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, plano-convex, obtuse, $2.4-2.5 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume obovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface irregularly tuberculate. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret obovate, 1 length of spikelet, membranous, 3 -veined, irregularly tuberculate, obtuse. Fertile lemma elliptic, 2.4-2.5 mm long, indurate, dark brown, shiny, without keel. Lemma surface striate. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil West Central, Brazil Northeast, Brazil North.
Maranhao, Piaui. Mato Grosso. Maranhão. Tocantins.

Paspalum culiacanum Vasey. Contrib. U. S. Nat. Herb. i. 281. (1893).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Mexico. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: E. Palmer 1647, 9 Oct 1891-15 Oct 1891, Mexico: Sinaloa: Lodiego on the Culiacan river, in large bunches around water hole in the mountains, 1891 (US-471366, foto SI; IT: US-865867).

Illustrations: None found.

Derivation (Clifford \& Bostock 2007): L. -anum, indicating location. From the mountains of Culiacan, Mexico.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms geniculately ascending, $60-85 \mathrm{~cm}$ long. Culm-internodes elliptical in section, ridged, distally glabrous. Culm-nodes glabrous. Lateral branches sparse. Leaf-sheaths glabrous on surface, outer margin hairy. Ligule an eciliate membrane, 2.5 mm long. Leaf-blades ascending, $10-23 \mathrm{~cm}$ long, $6-9 \mathrm{~mm}$ wide. Leaf-blade surface glabrous. Leaf-blade margins scabrous.

Inflorescence. Inflorescence composed of racemes, bracteate at branch bases. Racemes 3-8, borne along a central axis, unilateral, $4.5-7.5 \mathrm{~cm}$ long. Central inflorescence axis $3.5-7 \mathrm{~cm}$ long. Rhachis wingless, angular, 1 mm wide, with scattered hairs or glabrous on surface, scabrous on margins. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or obovate, dorsally compressed, planoconvex, obtuse, 2.3 mm long, 1.5 mm wide, falling entire.

Glumes. Glumes one to two the lower present in some spikelets, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.5-0.66$ length of spikelet, membranous, 1 -veined. Lower glume lateral veins absent. Lower glume apex acuminate. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5 -veined, obtuse. Fertile lemma elliptic, 2 mm long, indurate, pallid, without keel. Lemma surface striate. Lemma margins involute. Lemma apex papillose. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. North America, South America.
Country /Province/State. Mexico. Northwest Mexico. Mesoamerica. Guatemala.

Derivation (Clifford \& Bostock 2007): L. decumbo, fall down. Culms prostrate.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, mat forming. Culms decumbent, 15-40 cm long, 1-1.5 mm diam., rooting from lower nodes. Culm-internodes thin-walled, distally glabrous. Culm-nodes glabrous or pubescent. Leaf-sheaths keeled, glabrous on surface or pubescent, outer margin hairy. Ligule an eciliate membrane, $0.3-0.5 \mathrm{~mm}$ long, brown. Leaf-blade base cordate, with a brief petiole-like connection to sheath.

Leaf-blades lanceolate, $3-7 \mathrm{~cm}$ long, $7-12 \mathrm{~mm}$ wide. Leaf-blade midrib prominent beneath. Leaf-blade surface pilose. Leaf-blade margins ciliate. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes, terminal and axillary. Peduncle pilose above. Racemes 1 , single, arcuate, unilateral, $0.7-3 \mathrm{~cm}$ long. Rhachis narrowly winged, folded longitudinally to embrace spikelets, 0.5 mm wide, glabrous on margins or ciliate on margins. Spikelet packing crowded, irregular, 4 -rowed. Spikelets in pairs. Fertile spikelets pedicelled, 2 in the cluster. Pedicels present, scabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, $1.5-1.7 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes two, shorter than spikelet, thinner than fertile lemma. Lower glume oblate, $0.2-0.4$ mm long, 0 -veined. Lower glume lateral veins absent. Lower glume apex truncate. Upper glume ovate, $1.1-1.2 \mathrm{~mm}$ long, 0.75 length of spikelet, membranous, without keels, 3(-5) -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 3 -veined, with unevenly spaced veins (close to margin). Palea of lower sterile floret 0.75 length of lemma. Fertile lemma ovate, $1.4-1.5 \mathrm{~mm}$ long, indurate, pallid, without keel. Lemma surface striate. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 0.6-0.8 mm long, pallid. Caryopsis with adherent pericarp, orbicular, plano-convex, 0.9 mm long.

Derivation (Clifford \& Bostock 2007): In honor of D. M. Dedecca (fl. 1950-1957) Brazilian botanist.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose, clumped densely. Butt sheaths persistent and investing base of culm, with compacted dead sheaths. Basal innovations intravaginal. Culms $70-130 \mathrm{~cm}$ long. Culm-nodes bearded. Leaf-sheaths keeled, outer margin hairy. Ligule a fringe of hairs. Leaf-blade base tapering to the midrib. Leaf-blades lanceolate, 40 cm long, $3-7 \mathrm{~mm}$ wide. Leaf-blade surface pilose, hairy adaxially.

Inflorescence. Inflorescence composed of racemes. Racemes 2-5, digitate, unilateral, 4-8 cm long. Rhachis angular, 0.5 mm wide, scabrous on margins. Spikelet packing abaxial, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, oblong, 1 mm long, scabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate or elliptic, dorsally compressed, planoconvex, $3.8-4.8 \mathrm{~mm}$ long, $1.7-2.3 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 5 -veined, prominently veined, glabrous to pubescent, acute. Fertile lemma elliptic, $3.8-4.8 \mathrm{~mm}$ long, indurate, yellow, without keel. Lemma surface papillose. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
$2 n=20$ ( 1 ref TROPICOS), or 40 ( 1 ref TROPICOS).
Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil, Southern South America. Brazil West Central, Brazil Southeast, Brazil South. Paraguay.

Distrito Federal, Goiás, Mato Grosso do Sul. Minas Gerais, Sao Paulo. Paraná. Corrientes, Misiones.
Paspalum delavayi Henrard. Fedde, Repert. xxiv. 239 (1928).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, S-L Chen et al, Flora of China 22 (Poaceae) (2006).

TYPE from China. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: China: Yunnan: 21 June 1880, Delavay 1804 (HT: L; ST: herb. Balansa ?) Typus speciei in Herb. Lugd. Batav. sub no 908. 93-1722.

Illustrations (Books): S-L Chen et al, Flora of China, Illustrations, Poaceae (2007) (Fig. 738).
Derivation (Clifford \& Bostock 2007): in honor of Pierre Jean Marie Delavay (1834-95) French cleric who collected in China.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Cataphylls evident. Rhizomes short. Butt sheaths pubescent, persistent and investing base of culm, with compacted dead sheaths. Culms 70-80 cm long, 4-5 -noded. Culm-internodes elliptical in section. Culm-nodes glabrous. Lateral branches lacking. Leaf-sheaths keeled, glabrous on surface or hirsute. Ligule an eciliate membrane, $3-4 \mathrm{~mm}$ long, entire or lacerate, truncate. Leaf-blades erect, $5-10 \mathrm{~cm}$ long, $3-4 \mathrm{~mm}$ wide, stiff. Leaf-blade surface glabrous. Leaf-blade margins scabrous. Leaf-blade apex attenuate.

Inflorescence. Inflorescence composed of racemes. Racemes 2-3, paired or borne along a central axis, ascending or spreading, unilateral, $2.5-4 \mathrm{~cm}$ long. Central inflorescence axis $3-5 \mathrm{~cm}$ long. Rhachis narrowly winged, angular, 2 mm wide, scabrous on margins, glabrous on margins. Spikelet packing 2-3rowed. Raceme-bases brief, pilose, hairy at base. Spikelets in pairs. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong or ovate or obovate, dorsally compressed, plano-convex, acuminate, 3 mm long, $1.8-2 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, 1 length of spikelet, membranous, light green, without keels, 3 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, light green, 3 -veined. Fertile lemma ovate, gibbous, 2.5 mm long, indurate, yellow, without keel. Lemma surface punctate. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Temperate Asia.
Country /Province/State. China. China South Central.
Yunnan.

Illustrations (Books): E.Judziewicz, Flora of the Guianas, 187. Poaceae (1990) (493, Fig 85).
Derivation (Clifford \& Bostock 2007): L. delicate. Habit delicate.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Annual. Culms rambling, straight or zigzag, 15-30 cm long. Lateral branches ample. Leaves without demarcation between sheath and blade. Leaf-sheaths $3-6 \mathrm{~cm}$ long, mostly shorter than adjacent culm internode, wider than blade at the collar. Ligule an eciliate membrane, 1-1.3 mm long, acute. Leaf-blades $4-8 \mathrm{~cm}$ long, $0.5-1 \mathrm{~mm}$ wide. Leaf-blade apex attenuate.

Inflorescence. Inflorescence composed of racemes. Peduncle 3-8 cm long. Racemes 1, single, arcuate, unilateral, $1.5-3 \mathrm{~cm}$ long. Rhachis angular, $0.3-0.4 \mathrm{~mm}$ wide. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, plano-convex, 0.70.8 mm long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, $0.3-0.5 \mathrm{~mm}$ long, 0.5 length of spikelet, membranous, without keels, 3 -veined.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret obovate, 1 length of spikelet, membranous, 5 -veined, with unevenly spaced veins (near margins). Fertile lemma obovate, $0.7-0.8 \mathrm{~mm}$ long, indurate, yellow, without keel. Lemma surface papillose. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Northern South America, Western South America, Brazil. French Guiana, Venezuela. Bolivia, Colombia. Brazil West Central.

Paspalum densum Poir. Encyc. v. 32. (1804).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Puerto Rico. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: A.P. Ledru s.n., Puerto Rico (P-LA; IT: US-2809342 (fragm. ex P-LA), US-2809342 (fragm. ex FI, P)).

Illustrations (Books): A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (235, Fig. 185), S.A.Renvoize, Gramineas de Bolivia (1998) (472, Fig. 102), J.A.Steyermark et al, Flora of the Venezuelan Guayana Vol. 8 (2004) (233, Fig. 182).

Derivation (Clifford \& Bostock 2007): dense. Growing in large clumps.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths spongy. Culms erect, robust, 80200 cm long. Culm-nodes glabrous or pubescent. Lateral branches lacking. Leaf-sheaths as wide as blade at the collar, keeled, reticulately veined, glabrous on surface, outer margin hairy. Leaf-sheath oral hairs ciliate or bearded. Ligule an eciliate membrane, $1.5-3 \mathrm{~mm}$ long. Collar glabrous or pubescent. Leaf-blades conduplicate, $50-100 \mathrm{~cm}$ long, $10-20 \mathrm{~mm}$ wide. Leaf-blade surface glabrous. Leaf-blade margins spinulose. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes numerous, 50-100, borne along a central axis, closely spaced (pyramidal), unilateral, $3-9 \mathrm{~cm}$ long. Central inflorescence axis $12-20(-40) \mathrm{cm}$ long. Rhachis wingless, angular, $1.2-1.5 \mathrm{~mm}$ wide, dark-coloured (purple), scabrous on margins, ciliate on margins. Rhachis hairs $2-5 \mathrm{~mm}$ long. Spikelet packing crowded, irregular. Raceme-bases brief, pilose. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets orbicular, dorsally compressed, plano-convex, obtuse, 1.9-2.2 mm long, 1.8 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, hyaline, light brown, without keels, 3 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, hyaline, light brown, 3 -veined, obtuse. Fertile lemma orbicular, 1.8 mm long, indurate, pallid, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province/State. Mesoamerica, Caribbean, Northern South America, Western South America, Brazil. Nicaragua, Panama. (Pl. 24).
Derivation (Clifford \& Bostock 2007): L. differo, spread abroad; -ata, possessing. Racemes spreading in pseudo-verticils.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Basal innovations flabellate. Culms 40-180 cm long. Ligule an eciliate membrane, 3 mm long. Leaf-blades $6-45 \mathrm{~cm}$ long, $3-12 \mathrm{~mm}$ wide.

Inflorescence. Inflorescence composed of racemes. Racemes (2-)3-5(-11), borne along a central axis, unilateral, $4-11 \mathrm{~cm}$ long. Central inflorescence axis $2-20 \mathrm{~cm}$ long. Rhachis narrowly winged, angular, 1.2 mm wide. Spikelet packing regular, 2-4 -rowed. Spikelets in pairs. Fertile spikelets sessile and pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, plano-convex, acute, $2.8-3.8 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, 1 length of spikelet, membranous, yellow, without keels, 3 -veined. Upper glume surface pilose. Upper glume margins ciliate. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 3 -veined, pilose, acute. Fertile lemma ovate, gibbous, $2.5-3 \mathrm{~mm}$ long, indurate, pallid, without keel. Lemma surface striate. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Dominican Republic. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: E.L. Ekman H6248, 4 Jun 1926, Dominican Republic: Hispaniola I., Montecristi Prov. (US1299915).

Illustrations (Books): A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (208, Fig. 144). Illustrations (Journals): Ann. Missouri Bot. Gard. (92: 500: Fig. 16 (2005)).
Derivation (Clifford \& Bostock 2007): L. unequal. Glumes unequal in length or nerve number.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Culms erect or geniculately ascending, 12-35 cm long. Culm-nodes bearded. Lateral branches lacking. Leaf-sheaths as wide as blade at the collar, keeled, pilose, with tubercle-based hairs, outer margin hairy. Ligule an eciliate membrane, 1.5 mm long. Leaf-blades $4-15$ cm long, $3-5 \mathrm{~mm}$ wide. Leaf-blade midrib prominent beneath. Leaf-blade surface pubescent, hairy on both sides. Leaf-blade margins ciliate.

Inflorescence. Inflorescence composed of racemes, terminal and axillary. Peduncle pubescent above. Racemes 1, single, arcuate, unilateral, $1.5-4.5 \mathrm{~cm}$ long. Rhachis wingless, angular. Spikelets in pairs. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, obtuse, 1.9 mm long, 1.2 mm wide, falling entire.

Glumes. Glumes two, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, 0.2 length of spikelet (lower) or 0.66-0.75 length of spikelet (upper of pair), $0-1$-veined. Lower glume lateral veins absent. Lower glume apex acute. Upper glume elliptic, 0.9 length of spikelet, membranous, without keels, 3 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 3 -veined, obtuse. Palea of lower sterile floret $0.1-0.9$ length of
lemma. Fertile lemma elliptic, 1.8 mm long, indurate, pallid, without keel. Lemma surface striate. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Caribbean. Dominican Republic.

TYPE from USA. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: LT: Kalm s.n., USA (LINN-79.1; probable isotype, US-2855315 ex LINN). LT designated by Hitchcock, Contr. U.S. Natl. Herb. 12: 115-116 (1908); see also Chase, Contr. U.S. Natl. Herb. 28: 28 (1929).

Illustrations (Books): M.E.Barkworth et al, Flora of North America north of Mexico Vol 25 Poaceae, part 2 (2003) (574), A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (199, Fig. 125).

Derivation (Clifford \& Bostock 2007): L. cut up. Lodicules emarginate.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, mat forming. Culms decumbent or prostrate, 5-50 cm long. Lateral branches ample. Ligule an eciliate membrane. Leaf-blades $3-6 \mathrm{~cm}$ long, $2-5 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pubescent, sparsely hairy.

Inflorescence. Inflorescence composed of racemes. Racemes 2-4, borne along a central axis, unilateral, $1-3 \mathrm{~cm}$ long. Central inflorescence axis $2-6 \mathrm{~cm}$ long. Rhachis broadly winged, foliaceous, $2-3 \mathrm{~mm}$ wide. Spikelet packing abaxial, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong, dorsally compressed, obtuse or subacute, $1.8-2.2 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume oblong, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, oblong, 1 length of spikelet, membranous, 3 -veined, obtuse. Fertile lemma oblong, 1.8-2.2 mm long, indurate, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. North America, South America.
Country /Province /State. North-central USA, South-central USA, Southeastern USA. Kansas. Texas. Alabama, Arkansas, Delaware, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, District of Columbia. Caribbean, Western South America. TYPE from Santo Domingo. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Poiteau s.n., West Indies: Santo Domingo (LE-TRIN-0446.01 (fragm. ex hb. Mertens \& fig.); IT: P, US-2854665 (fragm. ex P)).

Illustrations (Books): A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (201, Fig. 130).
Derivation (Clifford \& Bostock 2007): Gk. dis, twice; stachys, spike as of an ear of wheat. Inflorescences with two branches or with regularly bifurcating branches.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, mat forming. Rhizomes elongated. Culms erect, slender, $12-40 \mathrm{~cm}$ long, wiry. Culm-internodes elliptical in section. Leaf-sheaths longer than adjacent culm
internode, keeled. Leaf-sheath oral hairs scanty. Ligule an eciliate membrane, 0.3 mm long. Leaf-blades erect, involute, 6-15 cm long, 1-2 mm wide.

Inflorescence. Inflorescence composed of racemes. Racemes 2, paired, unilateral, 1-2.5 cm long. Rhachis wingless, angular, $0.6-0.7 \mathrm{~mm}$ wide, scabrous on margins. Spikelet packing abaxial. Racemebases linear. Spikelets solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate or ovate, dorsally compressed, acute, 2.53 mm long, 1.2 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 3-5 -veined.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 3-5 -veined. Fertile lemma elliptic, 2.1 mm long, 1 mm wide, indurate, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Caribbean. Cuba, Dominican Republic, Haiti, Jamaica, Leeward Is, Windward Islands.

(Pl. 24 \& 24 as $P$. paspalodes).
Derivation (Clifford \& Bostock 2007): Gk. distichos, two-rowed. Plants with conspicuously tworowed spikelets or leaves.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, mat forming. Stolons present. Culms decumbent, 8-60 cm long. Ligule an eciliate membrane. Leaf-blades flat or convolute, 3-14 cm long, 3-7 mm wide.

Inflorescence. Inflorescence composed of racemes. Racemes 2(-3), paired, unilateral, 2-8 cm long. Rhachis narrowly winged, angular. Spikelet packing abaxial, regular, 2 -rowed. Spikelets solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, turgidly plano-convex, acute, $3-4 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure or two (rarely), reaching apex of florets, thinner than fertile lemma. Lower glume when present ovate, $0.1-0.2$ length of spikelet, hyaline, 0 -veined. Lower glume lateral veins absent. Upper glume elliptic, 1 length of spikelet, coriaceous, without keels, 3 -veined. Upper glume surface puberulous. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, coriaceous, 3 -veined, acute. Fertile lemma ovate, gibbous, 2.5 mm long, indurate, pallid, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. $n=24$ ( 1 ref TROPICOS). $2 n=60$ ( 1 ref TROPICOS), or 61 ( 1 ref TROPICOS).

TYPE from Cuba. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: ST: Brother León \& Brother Edmond 8607, 4 Jan 1919, Cuba: Sabana de Motembo (LS; IST: NY-71058, US-
1060723). ST: Bro. León \& Edmond 8682, May 1919, Cuba. Habana: Vedado (from seed collected in Sabana de Motembo) (LS; IST: US-1060723).

Illustrations (Books): A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (224, Fig. 172).
Derivation (Clifford \& Bostock 2007): in honor of Edmond a colleague of Bro Lion who collected in Cuba.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rhizomes short. Stolons present. Culms slender, $2-6 \mathrm{~cm}$ long. Culm-nodes pubescent. Leaves mostly basal. Leaf-sheaths pilose. Ligule an eciliate membrane, 1 mm long. Leaf-blades $1-6 \mathrm{~cm}$ long, $1-2 \mathrm{~mm}$ wide. Leaf-blade surface pilose, sparsely hairy, hairy adaxially.

Inflorescence. Inflorescence composed of racemes. Racemes 1, single, unilateral, $1-1.5 \mathrm{~cm}$ long. Rhachis wingless, flattened, 0.5 mm wide. Spikelet packing abaxial. Raceme-bases brief, hirsute. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, pubescent.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, plano-convex, caudate, $1.5-2 \mathrm{~mm}$ long, 1 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 7 -veined. Upper glume surface wrinkled. Upper glume apex erose, caudate.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 5 -veined, concave across back, acuminate. Fertile lemma ovate, $1.2-1.4 \mathrm{~mm}$ long, 1 mm wide, indurate, dark brown, without keel. Lemma surface papillose. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province/State. Caribbean. Cuba.

Paspalum ekmanianum Henrard. Meded. Herb. Leid. No. 40, 49 (1921).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Bolivia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: T. Herzog 1654, Mar 1911, Bolivia: Santa Cruz: Rio Pirai (L, IT: B, G, US-1161341).

Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 1, Aristidoideae a Pharoideae (2012) (396), S.A.Renvoize, Gramineas de Bolivia (1998) (459, Fig 99).

Derivation (Clifford \& Bostock 2007): L. -anum, indicating connection. In honor of Erik Leonard Ekman (1888-1931) Swedish botanist.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rhizomes short. Culms 30-60 cm long. Ligule a fringe of hairs. Leaf-blades $5-15 \mathrm{~cm}$ long, $1.5-5 \mathrm{~mm}$ wide.

Inflorescence. Inflorescence composed of racemes. Racemes 1, single, unilateral, 3-15 cm long. Rhachis wingless, angular, glabrous on surface. Spikelet packing abaxial, regular, 2 -rowed. Spikelets solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong, dorsally compressed, plano-convex, obtuse, $1.5-2 \mathrm{~mm}$ long, with hairs extending 2 mm beyond apex, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume oblong, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface setose, with tubercle-based hairs. Upper glume margins tuberculate, setose. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret oblong, 1 length of spikelet, membranous, 5 -veined, setose, with tubercle-based hairs, tuberculate on margins, setose on margins, obtuse. Fertile lemma ovate, gibbous, $1.5-2 \mathrm{~mm}$ long, coriaceous, without keel, 5 veined, more than 3-veined. Lemma margins involute. Lemma apex acute. Palea involute, coriaceous.

Distribution (TDWG). Continent. South America.
Country /Province/State. Western South America, Southern South America. Bolivia. Argentina Northwest.

Jujuy.

Paspalum ellipticum Doell. Mart. Fl. Bras. ii. II. 71. (1877).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: IT: L. Riedel 1650 ex parte, Sep, Brazil: São Paulo: Mogi (B; IT: LE, W (possible), FB(probable), FR, $\mathrm{P}($ probable), US-2854684 (fragm.)).

Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 1, Aristidoideae a Pharoideae (2012) (397).

Derivation (Clifford \& Bostock 2007): Gk. elluipsis, ellipse; -ike, belonging to. Spikelets elliptical in outline.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Culms geniculately ascending, slender, $60-100 \mathrm{~cm}$ long. Ligule an eciliate membrane. Leaf-blades filiform, $15-30 \mathrm{~cm}$ long, $1-1.5 \mathrm{~mm}$ wide. Leaf-blade surface glabrous.

Inflorescence. Inflorescence composed of racemes. Racemes 2, paired, unilateral, 4-6 cm long. Rhachis wingless, angular, 0.5 mm wide. Spikelet packing irregular. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, oblong, 1 mm long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, compressed slightly, plano-convex, 4 mm long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume margins ciliate. Upper glume hairs white. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 3 -veined, smooth or wrinkled, ciliate on margins, bearing white hairs, obtuse. Fertile lemma elliptic, gibbous, 4 mm long, indurate, pallid, without keel. Lemma surface striate. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil West Central, Brazil Northeast, Brazil Southeast, Brazil South.

Distrito Federal, Mato Grosso, Goiás, Mato Grosso do Sul. Bahia, Maranhão. Minas Gerais, Sao Paulo. Paraná, Rio Grande do Sul, Santa Catarina.

Derivation (Clifford \& Bostock 2007): L. equito, ride. Leaves distinctly equitant.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.

Habit, Vegetative Morphology. Perennial. Rhizomes short. Basal innovations flabellate. Culms robust, 100 cm long. Culm-internodes distally glabrous. Leaf-sheaths longer than adjacent culm internode, keeled, glabrous on surface. Ligule an eciliate membrane, truncate. Leaf-blades conduplicate, 6-10 mm wide, stiff. Leaf-blade apex abruptly acute.

Inflorescence. Inflorescence composed of racemes. Racemes 4-8, digitate, unilateral, 5-13 cm long. Rhachis angular. Spikelet packing abaxial, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, oblong.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, acute, 4 mm long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, acute. Fertile lemma elliptic, 4 mm long, indurate, yellow, shiny, without keel. Lemma surface punctate. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
$2 n=20$ ( 1 ref TROPICOS).
Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil, Southern South America. Brazil North, Brazil South. Paraguay, Uruguay.

Sao Paulo Parana, Catarina, Rio Grande do Sul. Santa Catarina. Corrientes, Misiones.

TYPE from Mexico. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: A.S. Hitchcock 7078, 21 Sep 1910, Mexico: Colima: Alzada (US-929913; IT:US-1385551).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. held upright. Spikelets or inflorescence branches held erect.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rhizomes short. Culms erect, 100 cm long. Lateral branches lacking. Leaf-sheaths pilose. Ligule an eciliate membrane, ciliate from base of abaxial surface, lacerate. Leaf-blades conduplicate, $15-30 \mathrm{~cm}$ long, 2-5 mm wide. Leaf-blade surface pilose, hairy adaxially.

Inflorescence. Inflorescence composed of racemes. Racemes 4-5, borne along a central axis, unilateral, $4.5-8 \mathrm{~cm}$ long. Rhachis 1 mm wide. Spikelet packing crowded. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, plano-convex, 2.8 mm long, 2 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, pallid or purple, without keels. Upper glume surface papillose.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, pallid or purple, papillose. Fertile lemma elliptic, 2.8 mm long, indurate, pallid, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. North America.
Country /Province/State. Mexico. Central Mexico, Northeast Mexico, Southwest Mexico.
Guanajuato. Colima, Jalisco, Michoacan.

Illustrations: None found.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Annual. Culms decumbent, $20-30 \mathrm{~cm}$ long. Leaf-sheaths hirsute, with tubercle-based hairs. Ligule an eciliate membrane. Leaf-blades $4-8 \mathrm{~cm}$ long, $2-3 \mathrm{~mm}$ wide. Leafblade surface hirsute, hairy on both sides, with tubercle-based hairs. Leaf-blade apex attenuate, filiform.

Inflorescence. Inflorescence composed of racemes. Racemes 2, paired, unilateral, $1.5-2.5 \mathrm{~cm}$ long. Central inflorescence axis $1.5-2 \mathrm{~cm}$ long. Rhachis narrowly winged, angular, 1 mm wide. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, oblong.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate or rhomboid, dorsally compressed, planoconvex, obtuse, 2 mm long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume obovate, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 3 -veined, obtuse. Fertile lemma orbicular, 1.5 mm long, indurate, pallid, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil Northeast, Brazil North.
Maranhao, Piaui. Maranhão. Tocantins.

Paspalum falcatum Nees ex Steud. Syn. Pl. Gram. 31. (1854).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: F. Sellow 5531, no date, Brazil (B; IT: BAA-2137 (fragm. ex B), K, L, US-1645168, US-2855324 (fragm. ex B)).

Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 1, Aristidoideae a Pharoideae (2012) (400), S.A.Renvoize, The Grasses of Bahia, 1984 (224, Fig. 83), L.B. Smith, D.C. Wasshausen, R.M. Klein Flora Illustrada Catarinensis Gramineas (1981-1982) (918, Fig 184), B.Rosengurtt, Gramineas UruguayasI (1970) (348, Fig. 151).

Derivation (Clifford \& Bostock 2007): L. falx, sickle; -ata, possessing. Inflorescence branches curved.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rhizomes elongated. Culms erect, 60-150 cm long. Culm-internodes distally glabrous or pubescent. Culm-nodes brown. Lateral branches lacking. Ligule an eciliate membrane, truncate or acute. Leaf-blades flat or involute, $8-35 \mathrm{~cm}$ long, $3-7 \mathrm{~mm}$ wide, stiff. Leaf-blade surface glabrous or pilose. Leaf-blade apex attenuate.

Inflorescence. Inflorescence composed of racemes. Racemes 5-15, borne along a central axis, arcuate, unilateral, $1.25-3.75 \mathrm{~cm}$ long. Central inflorescence axis $5-15 \mathrm{~cm}$ long. Rhachis broadly winged, membranous, folded longitudinally to embrace spikelets, 2.5 mm wide, dark-coloured (purple), ciliate on margins. Spikelet packing crowded, 4 -rowed. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, oblong.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong, dorsally compressed, plano-convex, subacute, 1.5 mm long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume oblong, 1 length of spikelet, membranous, without keels, 1-3 -veined. Upper glume lateral veins absent or obscure. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret oblong, 1 length of spikelet, membranous, 3 -veined, acute. Fertile lemma oblong, 1.5 mm long, indurate, shiny, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.

Derivation (Clifford \& Bostock 2007): L. fascis, bundle; -ulus, diminutive. -ata, possessing. With spikelets or branches clustered in the inflorescence.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Stolons present. Culms decumbent, 200-300 cm long, 5-7 mm diam., rooting from lower nodes. Culm-internodes solid, distally glabrous. Culm-nodes swollen. Lateral branches lacking or sparse. Leaf-sheaths glabrous on surface or pilose, outer margin hairy. Leafsheath oral hairs ciliate, $3-4 \mathrm{~mm}$ long. Ligule an eciliate membrane, $0.3-0.7 \mathrm{~mm}$ long, brown. Leaf-blades $20-70 \mathrm{~cm}$ long, $10-20 \mathrm{~mm}$ wide. Leaf-blade midrib keeled beneath. Leaf-blade surface glabrous or pilose, sparsely hairy.

Inflorescence. Inflorescence composed of racemes. Peduncle 3-6 cm long. Racemes 8-33, borne along a central axis, unilateral, $7-16 \mathrm{~cm}$ long. Central inflorescence axis $5-11 \mathrm{~cm}$ long. Rhachis narrowly winged, $0.8-1.4 \mathrm{~mm}$ wide. Spikelet packing abaxial, 2 -rowed. Raceme-bases brief, pilose. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, compressed strongly, acuminate, $3.7-4.6 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure or two, reaching apex of florets, thinner than fertile lemma. Lower glume oblate, 0.05 mm long, 0 -veined. Lower glume lateral veins absent. Upper glume ovate, 1 length of spikelet, membranous, without keels, 3-5 -veined. Upper glume margins ciliate.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 3-7 -veined, ciliolate on margins. Fertile lemma ovate, $3.3-4.3 \mathrm{~mm}$ long, indurate, pallid, without keel. Lemma surface striate. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 2.2-2.8 mm long, orange. Caryopsis with adherent pericarp, ellipsoid, 2 mm long.

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): In honor of Tarisco S. Filuerias (1950-) Brazilian botanist.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, 15-45 cm long, 2-3 -noded. Culm-internodes elliptical in section, 6 cm long, smooth, distally glabrous. Culm-nodes glabrous. Lateral branches lacking. Leaf-sheaths $4-8 \mathrm{~cm}$ long, glabrous on surface or pilose, with tubercle-based hairs, outer margin hairy. Ligule an eciliate membrane, 0.5 mm long. Leaf-blades filiform, involute, $15-20 \mathrm{~cm}$ long, 0.5 mm wide, stiff. Leaf-blade surface pilose, hairy abaxially, with tubercle-based hairs. Leaf-blade margins ciliate, hairy at base. Leaf-blade apex pungent.

Inflorescence. Inflorescence composed of racemes. Peduncle $15-25 \mathrm{~cm}$ long. Racemes 1 , single, unilateral, $2-5 \mathrm{~cm}$ long. Rhachis angular, $0.5-0.8 \mathrm{~mm}$ wide, puberulous on surface, smooth on margins or scaberulous on margins. Spikelet packing abaxial, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, oblong, glabrous or puberulous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, acute, $3.6-4 \mathrm{~mm}$ long, $1.2-1.4 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure or two, reaching apex of florets, thinner than fertile lemma. Lower glume lanceolate, $0-2.4 \mathrm{~mm}$ long, $0-0.66$ length of spikelet, membranous, $0-1$-veined. Lower glume lateral veins absent. Lower glume apex acute. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume primary vein ciliate. Upper glume margins ciliate. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 3 -veined, eciliate on midvein or ciliolate on midvein, ciliolate on margins, acute. Fertile lemma elliptic, $2.8-3.8 \mathrm{~mm}$ long, $1-1.3 \mathrm{~mm}$ wide, indurate, pallid, without keel. Lemma surface papillose. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Lodicules 2, cuneate, 0.2 mm long, fleshy. Anthers 3, 1.1-1.3 mm long. Caryopsis with adherent pericarp.

Distribution (TDWG). Continent. South America.
Country /Province/State. Brazil. Brazil West Central.
Goiás.

Derivation (Clifford \& Bostock 2007): L. fimbriae, fringe; -ata, possessing. With fringed glumes or lemmas.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Annual, caespitose. Culms erect, 10-65 cm long. Ligule a fringe of hairs. Leaf-blades linear or lanceolate, 9-25 cm long, 4-12 mm wide. Leaf-blade surface pilose. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes 2-7, borne along a central axis, unilateral, $1-5.5 \mathrm{~cm}$ long. Central inflorescence axis $1-10 \mathrm{~cm}$ long. Rhachis broadly winged, with sharp-edged midrib, $1.5-2 \mathrm{~mm}$ wide. Spikelet packing irregular, 2-4 -rowed. Spikelets in pairs. Fertile spikelets sessile and pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets orbicular, dorsally compressed, compressed strongly, plano-convex, obtuse, $2.5-3.5 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, chartaceous, without keels, winged on margins, winged all along, 3 -veined. Upper glume margins spinulose (and lacerate). Upper glume apex obtuse, mucronate.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, chartaceous, winged on margins, 3 -veined, spinulose on margins (and lacerate), obtuse, mucronate. Fertile lemma orbicular, gibbous, $2-3 \mathrm{~mm}$ long, indurate, without keel. Lemma surface granulose. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp, orbicular, flattened, plano-convex, 1.5 mm long. Embryo 0.5 length of caryopsis.

TYPE from Chile. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Bertero s.n., Chile: without locality (PR (photo); IT: US-2855336 (fragm. and photo)).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. yellow. Spikelets straw-colored.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Annual. Culms 20-60 cm long. Lateral branches ample, arising from lower culm. Ligule an eciliate membrane. Leaf-blades lanceolate, $5-10 \mathrm{~cm}$ long, $5-10 \mathrm{~mm}$ wide. Leafblade surface glabrous.

Inflorescence. Inflorescence composed of racemes. Racemes numerous, borne along a central axis, arcuate, unilateral, $0.8-1.8 \mathrm{~cm}$ long. Central inflorescence axis $5-18 \mathrm{~cm}$ long. Rhachis $0.5-1 \mathrm{~mm}$ wide. Spikelet packing abaxial. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, oblong.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, plano-convex, 2-2.3 mm long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, wider than lemma (and loose), membranous, without keels. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, acute. Fertile lemma oblong, $1.5-1.8 \mathrm{~mm}$ long, indurate, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Western South America, Southern South America. Peru. Chile North.

Paspalum floridanum Michx. Fl. Bor. Am. i. 44. (1803).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from USA. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: A. Michaux 5, no date, USA: Florida (P-MICHX; IT: US-2855337 (fragm. ex P-MICHX \& photo)).

Illustrations (Books): M.E.Barkworth et al, Flora of North America north of Mexico Vol 25 Poaceae, part 2 (2003), F.W.Gould, The Grasses of Texas (1975) (514, Fig. 270 as var. glabratum).

Derivation (Clifford \& Bostock 2007): L.-ana, indicating location. From Florida State, USA.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Rhizomes short. Culms 100-200 cm long. Leaf-sheaths glabrous on surface or hirsute. Ligule an eciliate membrane. Leaf-blades flat or conduplicate, $15-50 \mathrm{~cm}$ long, $4-10 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or hirsute.

Inflorescence. Inflorescence composed of racemes. Racemes 2-5, borne along a central axis, unilateral, $4-13 \mathrm{~cm}$ long. Central inflorescence axis $1-4 \mathrm{~cm}$ long. Rhachis narrowly winged, angular. Spikelet packing 4 -rowed. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or orbicular, dorsally compressed, planoconvex, obtuse, $3.6-4.8 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume orbicular, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, orbicular, 1 length of spikelet, membranous, 3 -veined, obtuse. Fertile lemma elliptic, gibbous, $3.6-4.8 \mathrm{~mm}$ long, indurate, light brown, without keel. Lemma surface rugulose. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. North America.

Illustrations (Journals): Ruizia (13:379 Fig 50e-f (1993) as Thrasya petrosa).
Derivation (Clifford \& Bostock 2007): L. folium, leaf; forma, appearance. Inflorescence branches winged.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms 100-150 cm long, 2-3 mm diam. Culminternodes thin-walled. Culm-nodes pubescent. Ligule an eciliate membrane, $0.5-1 \mathrm{~mm}$ long. Leaf-blades flat or revolute, $4-6 \mathrm{~mm}$ wide.

Inflorescence. Inflorescence composed of racemes. Racemes 1, single, arcuate, unilateral, 12-28 cm long. Rhachis broadly winged, folded longitudinally to embrace spikelets, $4-5 \mathrm{~mm}$ wide, terminating in a barren extension, extension flattened. Spikelet packing alternately adaxial and abaxial, regular, 1 -rowed. Spikelets pectinate, in pairs. Fertile spikelets sessile and pedicelled, 2 in the cluster. Pedicels present, fused to internode, united wholly.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, $4.5-5.5 \mathrm{~mm}$ long, falling entire. Spikelet callus square, 0.5 mm long, pubescent.

Glumes. Glumes dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume oblate, $0.5-1.5 \mathrm{~mm}$ long, $0.1-0.3$ length of spikelet, hyaline, without keels, $0-1$-veined. Lower glume lateral veins absent. Lower glume apex obtuse. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface pilose. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, coriaceous, 4 -veined, sulcate or readily splitting into two halves, pilose, acute. Palea of lower sterile floret becoming indurate on flanks at maturity. Fertile lemma elliptic, $3.5-4 \mathrm{~mm}$ long, coriaceous, without keel, 5 -veined, more than 3-veined. Lemma margins involute. Lemma apex acute, pubescent. Palea coriaceous.

Flower and Fruit. Lodicules 2, fleshy, truncate. Anthers 3, 1.8-2.2 mm long.
Distribution (TDWG). Continent. North America, South America.
Country /Province/State. Mexico. Southeast Mexico. Mesoamerica, Northern South America, Western South America, Brazil, Southern South America. Costa Rica, Guatemala, Panama. Guyana, Surinam, Venezuela. Bolivia, Colombia, Peru. Brazil West Central, Brazil Northeast, Brazil North, Brazil Southeast. Paraguay.

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: A. Macedo 3171, 18 Feb 1951, Brazil: Minas Gerais (US-2014969).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. handsome. Attractive in appearance.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rhizomes short. Culms 80-100 cm long. Culm-nodes glabrous. Leaf-sheaths glabrous on surface or pilose, with tubercle-based hairs, inner surface glabrous. Ligule an eciliate membrane, $1-1.2 \mathrm{~mm}$ long. Leaf-blades flat or convolute, $18-49 \mathrm{~cm}$ long, $1-5$ mm wide.

Inflorescence. Inflorescence composed of racemes. Racemes 9-13, borne along a central axis, unilateral, $5.5-7.5 \mathrm{~cm}$ long. Rhachis 1 mm wide, scabrous on margins. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, ciliate.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, plano-convex, subacute, $2.5-3 \mathrm{~mm}$ long, $1.1-2 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume obovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface glabrous or pubescent.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret obovate, 1 length of spikelet, membranous, 5 -veined, wrinkled, glabrous. Fertile lemma obovate, $2.5-3 \mathrm{~mm}$ long, $1.1-2 \mathrm{~mm}$ wide, indurate, dark brown, without keel. Lemma surface papillose. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil West Central, Brazil Southeast, Brazil South.
Goias, Minas Gerais, Rio de Janeiro, Espirito Santo, Sao Paulo Parana. Goiás.

TYPE from New Caledonia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: OM: Forster, [15 Mar 1777], New Caledonia [sic, err. pro. Easter Island] (B, B, BM, BM, BM, K, LE, LE-TRIN-0538.01a (fragm. \& ill.), S, S). fide D. Nicolson \& F. R. Fosber (2003).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. -anus, indicating connection. In honor of Johann Georg Adam Forster (1754-1794) German explorer and botanist.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms 40-50 cm long. Ligule an eciliate membrane, 2 mm long. Leaf-blades linear or lanceolate, $7-20 \mathrm{~cm}$ long, $5-13 \mathrm{~mm}$ wide.

Inflorescence. Inflorescence composed of racemes. Racemes 4-6, borne along a central axis, unilateral, $4-6 \mathrm{~cm}$ long. Central inflorescence axis $3-6 \mathrm{~cm}$ long. Rhachis narrowly winged, angular, 1 mm wide. Spikelet packing irregular, 3-4 -rowed. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, unequal, 0.5 mm long or 1.5 mm long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong, dorsally compressed, plano-convex, obtuse, 2.5 mm long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume oblong, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, oblong, 1 length of spikelet, membranous, 3 -veined, obtuse. Fertile lemma elliptic, gibbous, 2.5 mm long, indurate, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Distribution (TDWG). Continent. Pacific.
Country /Province /State. Southwestern Pacific, South-central Pacific. New Caledonia. Easter Is.

Paspalum foveolatum Mez. Syn. Pl. Glumac. 1: 22 (1855) [1853].
TYPE from Guyana. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: IT: Coll. Ukn. GUYANA NO. 6, no date, Guyana (US-1126114 (fragm. ex CN)).

Illustrations (Books): S.A.Renvoize, The Grasses of Bahia, 1984 (216, Fig. 80).
Derivation (Clifford \& Bostock 2007): L. fovea, pit; -olus, minute. -atum, possessing. Lower glume has a conspicuous circular depression.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.

Habit, Vegetative Morphology. Annual, caespitose. Culms $40-80 \mathrm{~cm}$ long. Ligule an eciliate membrane. Leaf-blades $10-20 \mathrm{~cm}$ long, $5-9 \mathrm{~mm}$ wide, flaccid. Leaf-blade surface pilose. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes 2-5, borne along a central axis, unilateral, $5-8 \mathrm{~cm}$ long. Rhachis flattened. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, oblong.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets orbicular, dorsally compressed, plano-convex, 1.5 mm long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume surface puberulous. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 3 -veined, rugose, rough on flanks, puberulous, acute. Fertile lemma orbicular, 1.5 mm long, indurate, dark brown, shiny, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Northern South America, Brazil. Brazil Northeast.
Bahia. Bahia.

Paspalum galapageium Chase. Proc. Calif. Acad. Sc. Ser. IV. xxi. 297 (1935).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Ecuador: Galapagos Islands. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: J.T. Howell 9612, 30 May 1932, Ecuador: Galapagos Islands: Isla Isabela (CAS211105; IT: US-1611608).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. -ium, indicating connection. From the Galapagos Islands.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Culms erect, $45-80 \mathrm{~cm}$ long. Lateral branches lacking. Leaf-sheaths glabrous on surface or puberulous, outer margin glabrous or hairy. Ligule an eciliate membrane, $2-4 \mathrm{~mm}$ long. Leaf-blades $15-25 \mathrm{~cm}$ long, $3-8 \mathrm{~mm}$ wide. Leaf-blade midrib prominent beneath. Leaf-blade surface pubescent, densely hairy, hairy on both sides.

Inflorescence. Inflorescence composed of racemes. Racemes 3-8, borne along a central axis, ascending or spreading, unilateral, $3-6.5 \mathrm{~cm}$ long. Rhachis wingless, angular, $0.6-0.8 \mathrm{~mm}$ wide, scabrous on margins. Raceme-bases pilose. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, flattened, scabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, subacute, $2-2.8 \mathrm{~mm}$ long, $1.5-1.8 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure or one to two the lower present in some spikelets, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume surface glabrous. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 3-5 -veined, obtuse. Fertile lemma elliptic, 22.3 mm long, 1.5 mm wide, indurate, pallid, shiny, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Cleistogenes absent or present, in lower sheaths.
Distribution (TDWG). Continent. South America.
Country /Province /State. Western South America. Galapagos.

Paspalum gardnerianum Nees. Hook. Kew Journ. ii. 103. (1850).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

Illustrations (Books): S.A.Renvoize, The Grasses of Bahia, 1984 (204, Fig. 75), J.A.Steyermark et al, Flora of the Venezuelan Guayana Vol. 8 (2004) (228, Fig. 172), E.Judziewicz, Flora of the Guianas, 187. Poaceae (1990) (493, Fig. 85).

Derivation (Clifford \& Bostock 2007): L. -ana, indicating connection. In honor of George Gardner (1812-49) Scots-born physician and botanist, sometime Director of Peradeniya Gardens, Sri Lanka.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths herbaceous, not bulbous or thickened and forming a bulb, villous. Culms erect, 45-100 cm long. Leaves basal and cauline. Ligule a fringe of hairs. Leaf-blades parallel-sided, $3-20 \mathrm{~cm}$ long, $3-8 \mathrm{~mm}$ wide. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes (1-)3-7(-11), borne along a central axis, unilateral, $2.5-11 \mathrm{~cm}$ long. Central inflorescence axis $2-15 \mathrm{~cm}$ long. Rhachis narrowly winged, angular, $0.5-0.7 \mathrm{~mm}$ wide. Spikelet packing abaxial, regular, 2-4 -rowed. Spikelets in pairs. Fertile spikelets pedicelled, $1-2$ in the cluster, on shorter pedicels than sterile. Companion sterile spikelets pedicelled, $0-1$ in the cluster. Pedicels present, oblong, setose, hairy at tip, with $1.5-2 \mathrm{~mm}$ long hairs.

Sterile Spikelets. Companion sterile spikelets rudimentary (when present).
Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or oblong, dorsally compressed, planoconvex, obtuse, 1.3-2.2 mm long, falling entire.

Glumes. Glumes both absent or obscure.
Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret obovate, 1 length of spikelet, membranous, 2-3 -veined, glabrous or pilose, obtuse. Fertile lemma orbicular, gibbous, $1.3-2.2 \mathrm{~mm}$ long, indurate, pallid or dark brown, without keel. Lemma surface granulose. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. South America.

Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Claussen 1021, no date, Brazil: without locality (P; IT: US-2855777).

Recent Synonyms: Paspalum reticulatum Hack., Oesterr. Bot. Zeitschr. 1901, 199. (1901).
Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. gemini, twins; flos, flower. Spikelets in pairs on a common peduncle.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Cataphylls evident. Culms erect, 80-100 cm long, 5-6 noded. Lateral branches lacking. Leaf-sheaths glabrous on surface or pubescent. Ligule an eciliate membrane, truncate. Leaf-blades linear or lanceolate, $10-20 \mathrm{~cm}$ long, $3-6 \mathrm{~mm}$ wide, stiff. Leaf-blade
surface scaberulous, rough adaxially, glabrous or hirsute, hairy adaxially. Leaf-blade margins scaberulous. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes 1-4, single or paired or borne along a central axis, arcuate, unilateral, $4-6 \mathrm{~cm}$ long. Central inflorescence axis $4-6 \mathrm{~cm}$ long. Rhachis angular. Spikelet packing irregular, 3-4 -rowed. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, oblong, 0.1-0.25 length of fertile spikelet, scaberulous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, obtuse, 3 mm long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 3 -veined, wrinkled, acute. Fertile lemma ovate, 3 mm long, indurate, light brown, shiny, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Northern South America, Western South America, Brazil. Venezuela. Bolivia, Colombia. Brazil West Central, Brazil Northeast, Brazil North, Brazil Southeast.

Mato Grosso, Goias, Maranhao, Piaui, Minas Gerais, Rio de Janeiro, Espirito Santo. Distrito Federal, Mato Grosso, Goiás. Maranhão. Amazonas, Pará. Minas Gerais, Sao Paulo.

Paspalum gemmosum Chase ex Renvoize. Kew Bull., 27(3): 454 (1972).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: A. Chase 11475, 20 Mar 1930-22 Mar 1930, Brazil. Goiás: vicinity of Goyaz (US-1500007; IT: K).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. gemma, jewel; -osum, well developed. Origin not given by the author but possibly a reference to the papillose upper lemma resembling a jewel.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Annual. Culms erect, $45-55 \mathrm{~cm}$ long. Leaf-sheaths pilose. Ligule an eciliate membrane, $1-1.5 \mathrm{~mm}$ long. Leaf-blades linear or lanceolate, $5-15 \mathrm{~cm}$ long, $5-13 \mathrm{~mm}$ wide. Leafblade surface pilose, densely hairy, hairy on both sides. Leaf-blade apex acuminate or attenuate.

Inflorescence. Inflorescence composed of racemes. Racemes 1-9, borne along a central axis, deflexed, unilateral, $1.5-6 \mathrm{~cm}$ long. Rhachis angular, $0.5-0.75 \mathrm{~mm}$ wide. Spikelet packing lax, $1-2$-rowed. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, oblong.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, plano-convex, 1.5 mm long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma, dull. Upper glume ovate, 0.1-0.15 length of spikelet, membranous, without keels, 3 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 5 -veined, pilose, acute. Fertile lemma elliptic, 1.5 mm long, indurate, without keel. Lemma surface papillose. Lemma margins involute. Palea involute, indurate. Palea surface papillose.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil West Central, Brazil Northeast.
Mato Grosso, Goias, Bahia. Mato Grosso, Goiás. Maranhão.

Paspalum giganteum Baldw. ex Vasey. Bull. Torrey Bot. Club, xiii. 166 (1886).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from USA. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: LT: A. H. Curtiss s.n., 1875, USA: E. Florida, Pablo Creek (US-929927). LT designated by Chase, Contr. U.S. Natl. Herb. 28: 195 (1929).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. very large. Culms tall compared with those of related species.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, culms solitary. Rhizomes short, scaly. Culms robust, 150200 cm long, 4-8 mm diam. Lateral branches lacking. Leaves basal and cauline. Leaf-sheaths without keel, glabrous on surface to pilose, with tubercle-based hairs. Ligule an eciliate membrane, $2-3 \mathrm{~mm}$ long. Leafblades $30-60 \mathrm{~cm}$ long, $10-23 \mathrm{~mm}$ wide. Leaf-blade surface glabrous, hairless except near base. Leaf-blade margins glabrous or ciliate.

Inflorescence. Inflorescence composed of racemes. Racemes 3-4, borne along a central axis, unilateral, $10-20 \mathrm{~cm}$ long. Rhachis wingless, angular, 1.5 mm wide, scabrous on margins. Spikelet packing crowded. Raceme-bases brief, hirsute. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, plano-convex, obtuse, $3-3.8 \mathrm{~mm}$ long, $2.5-3 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, light brown, without keels, 5 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, light brown, 5 -veined, obtuse. Fertile lemma obovate, 3-3.8 mm long, indurate, yellow, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. North America.
Country /Province/State. Southeastern USA. Florida.

TYPE from Argentina. Basionym or Replaced Name: Panicum glabrinode Hack., Annuaire Conserv. Jard. Bot. Geneve 17: 284-285 (1914). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Stuckert 22501 ex Lillo 12340, 14 Jan 1913, Argentina: Misiones: Santa Ana (W; IT: BA, BAA, BAF, LIL, SI, US-1817349 [Rodriguez 721], US-80753 (fragm. ex W)). [Rodriguez 721, with same coll. data, may be a PT or collected for Lillo].

Recent Synonyms: Paspalum concavum S.A. Renvoize, Kew Bull. 42(4): 921 (1987).
Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 1, Aristidoideae a Pharoideae (2012) (402).

Derivation (Clifford \& Bostock 2007): L. glaber, smooth; nodus, knot. Nodes glabrous.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Culms erect, 100-200 cm long. Culm-internodes $11-17 \mathrm{~cm}$ long. Culm-nodes glabrous. Leaf-sheaths $13-25 \mathrm{~cm}$ long, longer than adjacent culm internode, hispid, with tubercle-based hairs, outer margin hairy. Ligule an eciliate membrane, $1-1.7 \mathrm{~mm}$ long, truncate. Collar pubescent. Leaf-blade base cordate. Leaf-blades $37-60 \mathrm{~cm}$ long, $10-15 \mathrm{~mm}$ wide. Leaf-blade midrib conspicuous. Leaf-blade surface hispid, hairy on both sides. Leaf-blade margins scaberulous. Leaf-blade apex attenuate.

Inflorescence. Inflorescence composed of racemes, bracteate at branch bases. Racemes numerous, 1240 , borne along a central axis, unilateral, $2-7.5 \mathrm{~cm}$ long. Central inflorescence axis $14-25 \mathrm{~cm}$ long, hispid. Rhachis narrowly winged, angular, $0.6-1 \mathrm{~mm}$ wide, glabrous on surface or pilose on surface, glabrous on margins or ciliate on margins. Spikelet packing 4 -rowed. Raceme-bases pubescent. Spikelets in pairs. Fertile spikelets sessile and pedicelled. Pedicels present, scaberulous, bearing a few hairs or glabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, concavo-convex, 2.43.3 mm long, $0.9-1.1 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes two, reaching apex of florets, thinner than fertile lemma. Lower glume heteromorphic ovate or lanceolate, $0.2-0.5 \mathrm{~mm}$ long or $1.2-2.1 \mathrm{~mm}$ long, membranous, 0 -veined or 1 -veined. Upper glume ovate, 2.1-2.4 mm long, 0.75-0.9 length of spikelet, membranous, 3-5 -veined. Upper glume primary vein distinct, scabrous. Upper glume surface glabrous or pubescent, hairy above. Upper glume apex acuminate.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret ovate, 2.2-3.2 mm long, 0.9 length of spikelet, membranous, 5 -veined, with evident midvein, concave across back, scabrous, rough on midvein, obtuse. Fertile lemma elliptic, $2.5-2.9 \mathrm{~mm}$ long, 1 mm wide, indurate, yellow, without keel, 5 veined, more than 3 -veined. Lemma surface papillose, rough in lines. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3, $1.2-1.5 \mathrm{~mm}$ long, purple.
Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil, Southern South America. Brazil West Central. Paraguay.
Mato Grosso do Sul. Chaco, Misiones.

Paspalum glaucescens Hack. Oest. Bot. Zeitschr. 51:237 (1901).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: A.F.M. Glaziou 20130, 9 May 1892, Brazil: Minas Gerais (W; IT: K, P, US-2855323 (fragm.)).

## Paspalum glaziovii (A.G.Burman) S.Denham. Ann. Missouri Bot. Gard. 92(4): 503 (2005).

Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online (as Thrasya), W.D.Clayton \& K.Harman, GrassBase (2008) and online (as Thrasya).

Basionym or Replaced Name: Thrasya glaziovii A.G.Burman, Brittonia, 34(4): 460 (1982).
Illustrations: None found.
Derivation (Clifford \& Bostock 2007): In honor of Auguste Francois Marie Glaziou (1828-1906) French-born artist and Brazilian botanist.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, 50-70 cm long. Culm-nodes bearded. Leaf-sheaths keeled, pilose, with tubercle-based hairs, outer margin hairy. Ligule an eciliate membrane, 1.5 mm long, erose. Leaf-blades lanceolate, $8-15 \mathrm{~cm}$ long, $1.5-4 \mathrm{~mm}$ wide. Leaf-blade surface pubescent or pilose, hairy on both sides, with tubercle-based hairs. Leaf-blade margins ciliate. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes 1, single, arcuate, unilateral, 8-13 cm long. Rhachis broadly winged, folded longitudinally to embrace spikelets, $3-4 \mathrm{~mm}$ wide, pilose on surface, tuberculate on margins, ciliate on margins, terminating in a barren extension, extension flattened. Rhachis hairs white. Spikelet packing alternately adaxial and abaxial, regular, 1 -rowed. Spikelets pectinate, in pairs. Fertile spikelets sessile and pedicelled, 2 in the cluster. Pedicels present, fused to internode, united wholly.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, acute, 2.7 mm long, falling entire.

Glumes. Glumes dissimilar, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, 0.6 mm long, 0.1 length of spikelet, hyaline, without keels, 0 -veined. Lower glume lateral veins absent. Lower glume apex acute. Upper glume elliptic, 2.5 mm long, 1 length of adjacent fertile lemma, 0.9 length of spikelet, membranous, thinner along midline, without keels, 2 -veined. Upper glume primary vein absent. Upper glume surface glabrous or pilose, hairy above. Upper glume margins ciliate. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, coriaceous, sulcate or readily splitting into two halves, eciliate on midvein or pubescent on midvein, ciliate on margins (above), acute. Palea of lower sterile floret becoming indurate on flanks at maturity. Fertile lemma elliptic, 2.5 mm long, coriaceous, pallid or purple, without keel. Lemma margins involute. Lemma apex acute, pubescent. Palea coriaceous.

Flower and Fruit. Lodicules 2, fleshy, truncate. Anthers 3.
Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil West Central.
Distrito Federal, Mato Grosso, Goiás.

Paspalum glumaceum Clayton. Kew Bull., 30(1): 104 (1975).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Zambia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Zambia: Mpika Dist.: Mfuwe, Astle 5458 (HT: K).

Illustrations (Books): G.V.Pope et al., Flora Zambesiaca 10 (3(1989):92, t. 22).
Derivation (Clifford \& Bostock 2007): L. gluma, husk; -acea, belonging to. Glumes conspicuous.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms geniculately ascending, 30-100 cm long. Ligule an eciliate membrane. Leaf-blades linear or lanceolate, $8-30 \mathrm{~cm}$ long, $8-19 \mathrm{~mm}$ wide. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes 2-3, paired or borne along a central axis, unilateral, $2-11 \mathrm{~cm}$ long. Central inflorescence axis $0.5-6 \mathrm{~cm}$ long. Rhachis broadly winged, with sharpedged midrib, $1.5-2 \mathrm{~mm}$ wide. Spikelet packing abaxial, regular, 2 -rowed. Spikelets solitary or in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or orbicular, dorsally compressed, planoconvex, obtuse, (2.5-) $2.8-3.5 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure or two, dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume lanceolate, $0.5-1.5 \mathrm{~mm}$ long, $0.2-0.5$ length of spikelet, membranous. Lower glume apex acute. Upper glume ovate, 1 length of spikelet, chartaceous, without keels, 5 -veined. Upper glume surface glabrous or pubescent. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, chartaceous, 3 -veined, glabrous or pubescent, obtuse. Fertile lemma ovate, gibbous, $2-3 \mathrm{~mm}$ long, indurate, dark brown, without keel. Lemma surface striate. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. Africa.
Country /Province /State. Northeast Tropical Africa, East Tropical Africa, South Tropical Africa, Western Indian Ocean. Ethiopia (inc. Eritrea), Sudan. Kenya, Tanzania, Uganda. Malawi, Zambia, Zimbabwe. Madagascar.

## Paspalum goyanum Swallen. Phytologia, xiv. 376 (1967).

Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online.
TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: A. Chase 11733, 3 Apr 1930, Brazil: Goias (US-1501446).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. -anum, indicating connection. From Goyaz Province, Brazil. Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Culms erect, slender, 110 cm long. Leaf-sheaths longer than adjacent culm internode, glabrous on surface. Ligule an eciliate membrane, $2.5-3 \mathrm{~mm}$ long, brown. Leaf-blades curled or flexuous, $15-30 \mathrm{~cm}$ long, $0.5-1.5 \mathrm{~mm}$ wide. Leaf-blade surface glabrous. Leaf-blade apex attenuate.

Inflorescence. Inflorescence composed of racemes. Racemes $2-3$, paired or digitate, ascending, unilateral, $9-11 \mathrm{~cm}$ long. Rhachis angular, 0.6 mm wide, puberulous on surface, glabrous on margins. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, $0.5-1 \mathrm{~mm}$ long, glabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or obovate, dorsally compressed, planoconvex, $2.3-2.5 \mathrm{~mm}$ long, $1.3-1.4 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, shorter than spikelet, thinner than fertile lemma. Upper glume elliptic, 0.9 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface glabrous. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, with conspicuous midvein, glabrous, obtuse. Fertile lemma elliptic, 2.32.5 mm long, indurate, dark brown, shiny, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.

Distribution (TDWG). Continent. South America. Country /Province /State. Brazil. Brazil West Central.

Paspalum goyasense Davidse,Morrone, Zuloaga. Novon 11(4): 391 (2001).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: H.S. Irwin, R. Souza \& R. Reis dos Santos 10524, 19 Nov 1965, Brazil: Goias (MO; IT: US-2529124).

Illustrations (Journals): Novon (11: 392 Fig. 2 (2001)).
Derivation (Clifford \& Bostock 2007): L. -ensis, denoting origin. From Goyas State, Brazil.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, herbaceous, or if woody then not a bamboo, caespitose. Culms erect, $40-65 \mathrm{~cm}$ long, 1 mm diam., 2-3 -noded. Culm-internodes 6-20 cm long, distally glabrous. Culm-nodes brown, pubescent. Lateral branches lacking. Leaves mostly basal. Leaf-sheaths 3-10 cm long, pilose, with tubercle-based hairs. Ligule an eciliate membrane, $0.5-0.9 \mathrm{~mm}$ long, brown. Collar pilose. Leaf-blades $8-20 \mathrm{~cm}$ long, $2-4 \mathrm{~mm}$ wide, stiff. Leaf-blade surface pilose, densely hairy, hairy abaxially, with tubercle-based hairs. Leaf-blade margins ciliate. Leaf-blade apex acute.

Inflorescence. Inflorescence composed of racemes, bracteate at branch bases. Peduncle 15-30 cm long. Racemes 2, paired, unilateral, 2-7 cm long. Central inflorescence axis $0-3 \mathrm{~cm}$ long. Rhachis broadly winged, $1-1.6 \mathrm{~mm}$ wide. Spikelet packing abaxial, 2 -rowed. Raceme-bases glabrous. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, oblong, glabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, acute, $4-5 \mathrm{~mm}$ long, $1-1.1 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume surface hirsute, hairy below. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 3-5 -veined, hirsute, hairy below, obtuse. Fertile lemma elliptic, gibbous, $3.2-4 \mathrm{~mm}$ long, 0.9 mm wide, cartilaginous, without keel. Lemma surface papillose. Lemma margins flat. Lemma apex pubescent. Palea involute, indurate.

Flower and Fruit. Lodicules 2, 0.3 mm long. Anthers $3,2 \mathrm{~mm}$ long. Caryopsis with adherent pericarp, obovoid, 2 mm long. Embryo 0.33 length of caryopsis. Hilum elliptic.

Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil West Central.
Distrito Federal, Goiás.

Paspalum gracielae Sulekic. Darwiniana 44 (1): 127-129, f. 1 (2006).
TYPE from Argentina. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Argentina: Salta: Dpto. Chicoana, Quebrada de Escoipe, 1600 m, 28 Jan 2001, Sulekic, Cano \& L. Villagrán 3123 (HT: SI; IT: MCNS, SI, Herb. Sulekic).

Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 1, Aristidoideae a Pharoideae (2012) (405).

Illustrations (Journals): Darwiniana (44: 128, Fig. 1 (2006)).
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Rhizomes elongated, scaly. Culms erect or geniculately ascending, $70-130 \mathrm{~cm}$ long. Culm-nodes glabrous. Lateral branches ample. Leaf-sheaths glabrous on surface or pilose, outer margin glabrous. Ligule an eciliate membrane, 2.2-3 mm long, brown, truncate or obtuse. Leaf-blades lanceolate, $4-20 \mathrm{~cm}$ long, $3-13 \mathrm{~mm}$ wide. Leaf-blade surface pilose, sparsely hairy, hairy abaxially. Leaf-blade margins ciliate, hairy at base.

Inflorescence. Inflorescence composed of racemes. Racemes (1-)2-3, borne along a central axis, ascending, unilateral, 6-8.5 cm long. Central inflorescence axis $2.5-7.5 \mathrm{~cm}$ long. Rhachis broadly winged,
membranous, $3.7-4.2 \mathrm{~mm}$ wide, light-coloured (green \& purple). Spikelet packing abaxial. Spikelets solitary or in pairs. Fertile spikelets pedicelled, the lower smaller. Pedicels present, oblong, 0.5 mm long, tip discoid.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, 3-4.2 mm long, $1-1.6 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume surface pilose, hairy below. Upper glume margins villous. Upper glume hairs $2-4 \mathrm{~mm}$ long. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 3 -veined, scabrous, rough above, pilose, hairy at base, villous on margins, bearing hairs $1-2.5 \mathrm{~mm}$ long, acute. Fertile lemma elliptic, $2.6-3.4 \mathrm{~mm}$ long, $1-1.3 \mathrm{~mm}$ wide, coriaceous, pallid, shiny, without keel, 5 -veined, more than 3-veined. Lemma surface scaberulous, rough above. Lemma margins involute. Palea involute, coriaceous. Palea surface glabrous.

Flower and Fruit. Lodicules 2, 0.3 mm long, membranous, truncate. Anthers $3,2-2.5 \mathrm{~mm}$ long, purple. Caryopsis with adherent pericarp.

Distribution (TDWG). Continent. South America.
Country /Province/State. Southern South America. Argentina Northwest.
Salta.

Paspalum graniticum (A.G.Burman) S.Denham. Ann. Missouri Bot. Gard. 92(4): 503 (2005).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online (as Thrasya), W.D.Clayton \& K.Harman, GrassBase (2008) and online (as Thrasya).

Basionym or Replaced Name: Thrasya granitica A.G.Burman, Brittonia, 32(2): 219 (1980).
Illustrations: None found.
Derivation (Clifford \& Bostock 2007): English granite. L. icum, belonging to. Growing on granitic soils.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect or geniculately ascending or decumbent, $30-60 \mathrm{~cm}$ long. Culm-nodes glabrous. Leaf-sheaths keeled, glabrous on surface or pilose, with tubercle-based hairs, outer margin hairy. Ligule an eciliate membrane, 1.5 mm long, pilose on abaxial surface. Leaf-blades $3.5-10 \mathrm{~cm}$ long, 4 mm wide. Leaf-blade surface puberulous, hairy on both sides. Leafblade apex acuminate.

Inflorescence. Inflorescence composed of racemes, terminal and axillary. Racemes 1, single, arcuate, unilateral, $5-7 \mathrm{~cm}$ long. Rhachis narrowly winged, folded longitudinally to embrace spikelets, 1 mm wide, glabrous on surface, scabrous on margins or tuberculate on margins, glabrous on margins or ciliate on margins, terminating in a barren extension, extension flattened. Spikelet packing alternately adaxial and abaxial, regular, 1 -rowed. Spikelets pectinate, in pairs. Fertile spikelets sessile and pedicelled, 2 in the cluster. Pedicels present, fused to internode, united wholly, pubescent.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or oblong, dorsally compressed, acute, 2.42.6 mm long, 0.7 mm wide, falling entire.

Glumes. Glumes dissimilar, shorter than spikelet, thinner than fertile lemma. Lower glume oblate, 0.2 mm long, 0.1 length of spikelet, membranous, without keels, 0 -veined. Lower glume lateral veins absent. Lower glume apex obtuse. Upper glume elliptic, 0.8 length of spikelet, membranous, without keels, 7 veined. Upper glume lateral veins without cross-veins or transversely connected at apex. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret oblong, 1 length of spikelet, coriaceous, sulcate, papillose, obtuse. Palea of lower sterile floret becoming indurate on flanks at maturity. Fertile lemma elliptic, 2.1 mm long, coriaceous, without keel. Lemma surface papillose or striate. Lemma margins involute. Lemma apex acute, without ornament. Palea coriaceous.

Flower and Fruit. Lodicules 2, fleshy, truncate. Anthers 3.

Distribution (TDWG). Continent. South America.
Country /Province /State. Northern South America. Surinam.

Paspalum guaraniticum L. Parodi. Not. Mus. La Plata, Bot. 2 :101 (1937).
Accepted by: U.Quattrocchi, CRC World Dictionary of Grasses (2006).
TYPE from Argentina. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: L.R. Parodi 12140, 14 Nov 1934, Argentina: Corrientes, Chavarría (BAA; IT: US-1721272).

Illustrations (Books): A.Burkat, Flora Ilustrada de Entre Rios (Argentina), Pt II, Gramineas (1969) (381, Fig. 158).

Derivation (Clifford \& Bostock 2007): L. -icum, belonging to. From the land of the Guarani in Argentina.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose, clumped densely. Culms erect, 50-100 cm long, 3 -noded. Culm-nodes black, glabrous or pubescent. Leaf-sheaths glabrous on surface, outer margin glabrous or hairy. Leaf-sheath oral hairs ciliate. Ligule an eciliate membrane, 1.5 mm long, brown. Leafblade base tapering to the midrib. Leaf-blades flat or involute, $15-35 \mathrm{~cm}$ long, $1-6 \mathrm{~mm}$ wide. Leaf-blade apex attenuate.

Inflorescence. Inflorescence composed of racemes. Racemes 2, paired, unilateral, 10-12 cm long. Central inflorescence axis 0 cm long. Rhachis narrowly winged, flattened, $1.3-1.4 \mathrm{~mm}$ wide, ciliate on margins. Spikelet packing abaxial, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, oblong, ciliate.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate or elliptic, dorsally compressed, planoconvex, $4-5 \mathrm{~mm}$ long, $2-2.4 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume margins scaberulous. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 3 -veined, acute. Fertile lemma ovate, $3.8-4 \mathrm{~mm}$ long, 1.5 mm wide, indurate, pallid, without keel. Lemma surface asperulous. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
$2 n=40$ ( 1 ref TROPICOS).
Distribution (TDWG). Continent. South America.
Country /Province/State. Brazil, Southern South America. Brazil South. Argentina Northeast. Catarina, Rio Grande do Sul. Entre Rios.

Paspalum guaricense Swallen. Phytologia, xiv. 378 (1967).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Venezuela. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: H. Pittier 12520, 11 Sep 1927, Venezuela: Guárico: in humid places, El Dividive (US-1343986; IT: MO941986).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From Guarico, Venezuela.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Annual. Culms erect, slender, $55-75 \mathrm{~cm}$ long. Lateral branches ample, arising from lower culm. Leaf-sheaths longer than adjacent culm internode, keeled, hirsute. Ligule an eciliate membrane, 3 mm long. Leaf-blades conduplicate, $15-20 \mathrm{~cm}$ long, $4-7 \mathrm{~mm}$ wide. Leaf-blade surface hirsute.

Inflorescence. Inflorescence composed of racemes. Racemes 4-7, borne along a central axis, unilateral, $3-6 \mathrm{~cm}$ long. Central inflorescence axis 6 cm long. Rhachis narrowly winged, angular, 1 mm wide,
tuberculate on margins, villous on margins. Rhachis hairs 4 mm long. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, oblong.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, plano-convex, obtuse, $1.8-1.9 \mathrm{~mm}$ long, $1.3-1.4 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume obovate, 1 length of spikelet, membranous, dark brown, without keels, 3 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret obovate, 1 length of spikelet, membranous, dark brown, 3 -veined, obtuse. Fertile lemma obovate, 1.8 mm long, indurate, dark brown, without keel. Lemma surface striate. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province/State. Northern South America. Venezuela.

Paspalum guayanerum Beetle. Phytologia, 35(3): 22 (1977).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Mexico. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Mexico: Sinaloa: between Mazatlan and Durango, rocky cliff face near La Guayanera, 6 Jan. 1975, A.A. Beetle M3669 (HT: not designated).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): From La Guayanera, Sinola State, Mexico.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Annual. Culms $20-40 \mathrm{~cm}$ long. Leaf-sheaths hirsute. Ligule an eciliate membrane, $1-1.5 \mathrm{~mm}$ long. Leaf-blades $10-20 \mathrm{~cm}$ long, $2-3 \mathrm{~mm}$ wide. Leaf-blade surface hirsute.

Inflorescence. Inflorescence composed of racemes. Racemes 2-9, borne along a central axis, arcuate, unilateral, $0.5-0.8 \mathrm{~cm}$ long. Rhachis broadly winged, foliaceous, 0.5 mm wide, hirsute on surface, terminating in a barren extension. Spikelet packing abaxial, 1 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, oblong.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, plano-convex, 1 mm long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels. Upper glume surface glabrous. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, glabrous, acute. Fertile lemma elliptic, 1 mm long, indurate, light brown, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. North America.
Country /Province/State. Mexico. Northwest Mexico, Southwest Mexico.
Sinaloa, Sonora. Nayarit.

Paspalum guenoarum Arechav. Anal. Mus. nac. Montevid. i. 56. (1894).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Uruguay. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: J. Arechavaleta s.n., Feb 1891, Uruguay: Soriano (MVM; IT: SI, US-950750).

Recent Synonyms: Paspalum rhodopedum L.B.Sm. \& Wassh., Bradea 2(35): 247 (1978). Paspalum rojasii Hack.Fedde, Repert. Nov. Sp. 7: 369 (1909).

Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 1, Aristidoideae a Pharoideae (2012) (405), L.B. Smith, D.C. Wasshausen, R.M. Klein Flora Illustrada Catarinensis Gramineas (1981-1982) (979, Fig. 193 as P. rhodopedum \& 983, Fig 194 as var. guenoarum).

Derivation (Clifford \& Bostock 2007): In honor of the Guenoas, a people who lived on Isla Vizcaino, Uruguay.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Rhizomes absent or short. Culms 80-200 cm long, 3-4noded. Ligule an eciliate membrane, $2-3 \mathrm{~mm}$ long. Leaf-blades $20-40 \mathrm{~cm}$ long, $6-18 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pilose, hairy adaxially. Leaf-blade apex acute.

Inflorescence. Inflorescence composed of racemes. Racemes 3-13, borne along a central axis, unilateral, $7-17 \mathrm{~cm}$ long. Rhachis angular. Spikelet packing $2-4$-rowed. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, oblong, 1 mm long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, plano-convex, 3-3.5 mm long, 2-2.5 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume obovate, 1 length of spikelet, membranous, without keels, 3-5 -veined. Upper glume surface glabrous or pubescent. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret obovate, 1 length of spikelet, membranous, 3-5 -veined, wrinkled, obtuse. Fertile lemma ovate, 2.5 mm long, indurate, dark brown, shiny, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): In honor of Gert Hatschbach (1923-) Brazilian botanist.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, herbaceous, or if woody then not a bamboo, caespitose. Rhizomes short. Culms $65-120 \mathrm{~cm}$ long, 2-3 -noded. Culm-internodes $15-25 \mathrm{~cm}$ long. Culm-nodes glabrous. Lateral branches lacking. Leaves mostly basal. Leaf-sheaths $4-6 \mathrm{~cm}$ long, striately veined, hirsute. Ligule an eciliate membrane, $1-1.2 \mathrm{~mm}$ long, brown. Leaf-blades lanceolate, $28-32 \mathrm{~cm}$ long, $9-11 \mathrm{~mm}$ wide. Leaf-blade surface hispid, sparsely hairy, hairy on both sides. Leaf-blade margins cartilaginous, ciliate. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes, without bracts or bracteate at branch bases. Peduncle $30-60 \mathrm{~cm}$ long, glabrous. Racemes 2, single, unilateral, 6-8 cm long. Rhachis broadly winged, $1.2-2 \mathrm{~mm}$ wide. Spikelet packing abaxial. Raceme-bases pubescent. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $0.5-0.7 \mathrm{~mm}$ long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, acute, $5.9-6.4 \mathrm{~mm}$ long, $2.1-2.2 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface hirsute. Upper glume hairs red, 2.5 mm long. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 5 -veined, glabrous, obtuse. Fertile lemma elliptic, gibbous, $5.4-6 \mathrm{~mm}$ long, $1.8-2.1 \mathrm{~mm}$ wide, indurate, yellow, without keel, 5 -veined, more than 3 -veined. Lemma surface papillose. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Lodicules 2, 0.7 mm long. Anthers $3,3.5-4.5 \mathrm{~mm}$ long. Caryopsis with adherent pericarp.

Distribution (TDWG). Continent. South America.
Country /Province/State. Brazil. Brazil West Central.
Mato Grosso, Mato Grosso do Sul.

Derivation (Clifford \& Bostock 2007): In honor of Lucien Leon Hauman, also Hauman-Merck (18801965) Belgian botanist who collected in Africa and South America.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose, clumped densely. Rhizomes short. Basal innovations intravaginal. Culms erect, robust, $250-300 \mathrm{~cm}$ long, $8-10 \mathrm{~mm}$ diam., $5-6$-noded. Culminternodes thin-walled. Culm-nodes glabrous. Leaves without demarcation between sheath and blade. Leaf-
sheaths $70-80 \mathrm{~cm}$ long, without keel, glabrous on surface. Ligule an eciliate membrane, 1.5 mm long. Leafblades $100-150 \mathrm{~cm}$ long, $12-14 \mathrm{~mm}$ wide. Leaf-blade margins scabrous.

Inflorescence. Inflorescence composed of racemes. Racemes numerous, 60-100, borne along a central axis, unilateral, $4-10 \mathrm{~cm}$ long. Central inflorescence axis $20-60 \mathrm{~cm}$ long. Rhachis wingless, angular, $1-1.5$ mm wide. Spikelet packing irregular, 4-6 -rowed. Spikelets in pairs. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate or elliptic, dorsally compressed, planoconvex, acute, $3.5-4 \mathrm{~mm}$ long, $1.4-1.5 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume lanceolate, $3.5-4 \mathrm{~mm}$ long, 1.4-1.6 length of adjacent fertile lemma, 1 length of spikelet, membranous, red, without keels, 3 -veined. Upper glume surface puberulous.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, $3.5-4 \mathrm{~mm}$ long, $1.4-1.6$ length of fertile lemma, 1 length of spikelet, membranous, red, 3 -veined, pubescent. Fertile lemma elliptic, 2.5 mm long, indurate, pallid or yellow, shiny, without keel. Lemma surface punctate. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil, Southern South America. Brazil South. Argentina Northeast, Paraguay, Uruguay.

Sao Paulo Parana, Catarina, Rio Grande do Sul. Paraná, Rio Grande do Sul, Santa Catarina. Buenos Aires, Chaco, Corrientes, Entre Rios, Misiones, Santa Fe.

Paspalum heterotrichon Trin. Sp. Gram. Ic. iii. t. 285. (1831).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: G.H. von Langsdorff s.n. [1829], 1829, Brazil: absque loco (LE-TRIN-0470.02 (\& fig.); IT: K (photo, SI), US2855297 (fragm ex LE)). OM: Langsdorff 1060, Brazil (LE).

Illustrations (Books): A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (198, Fig. 124). Illustrations (Journals): Ruizia (13:352, Fig 44e-g (1993)).
Derivation (Clifford \& Bostock 2007): Gk. heteros, different; thrix, hair. Glumes and sterile lemma bear hairs of various lengths.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms leaning, slender, 50-90 cm long, wiry. Culm-nodes bearded. Lateral branches ample or fastigiate, arising from mid culm or upper culm. Leaves cauline. Leaf-sheaths outer margin hairy. Leaf-sheath oral hairs bearded, $4-5 \mathrm{~mm}$ long. Ligule an eciliate membrane. Collar pubescent. Leaf-blades flat or involute, $5-15 \mathrm{~cm}$ long, $2-3.5 \mathrm{~mm}$ wide. Leaf-blade surface puberulous, hairy adaxially. Leaf-blade apex acuminate, filiform.

Inflorescence. Inflorescence composed of racemes. Racemes (1-)2-7, borne along a central axis, unilateral, $1-6 \mathrm{~cm}$ long. Rhachis broadly winged, membranous, $3-4 \mathrm{~mm}$ wide, light-coloured (yellow), terminating in a barren extension, extension flattened. Spikelet packing abaxial. Raceme-bases brief, hirsute. Spikelets solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, acute, 2.5 mm long, 0.8 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, hyaline, without keels, 3 -veined. Upper glume surface villous, hairy at base, with marginal tufts of hair (single $2-3 \mathrm{~mm}$ hair). Upper glume margins ciliate. Upper glume hairs white, $1-2 \mathrm{~mm}$ long.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 3 -veined, sulcate, ciliate on margins, fringed above. Fertile lemma
lanceolate or elliptic, 1.7 mm long, 0.6 mm wide, coriaceous, without keel. Lemma margins involute. Palea involute, coriaceous.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. North America, South America.
Country /Province /State. Mexico. Southeast Mexico. Mesoamerica, Caribbean, Northern South America, Western South America, Brazil. Honduras, Panama. Dominican Republic, Haiti. Venezuela. Colombia, Peru. Brazil West Central, Brazil Southeast.

TYPE from Mexico. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: G.B. Hinton 1807, 22 Sep 1932, Mexico: México: Temascaltepec Distr.: Vigas, 1080 m (US; IT: TEX).

Illustrations (Journals): Ann. Missouri Bot. Gard. (92: 504: Fig. 18 (2005)).
Derivation (Clifford \& Bostock 2007): in honor of George Bode Hinton (1882-1943) United States botanist.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms $30-60 \mathrm{~cm}$ long. Leaf-sheaths pubescent. Ligule an eciliate membrane, 1 mm long, brown, ciliate from base of abaxial surface. Leaf-blades $8-15 \mathrm{~cm}$ long, $3-5 \mathrm{~mm}$ wide.

Inflorescence. Inflorescence composed of racemes, with 1-2 peduncles per sheath. Racemes 1, single, arcuate, unilateral, 5-9 cm long. Rhachis 1 mm wide. Spikelet packing crowded. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or obovate, dorsally compressed, planoconvex, $2-2.3 \mathrm{~mm}$ long, $1.2-1.5 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one to two the lower present in some spikelets, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, 0.4 mm long, 0.2 length of spikelet. Upper glume elliptic, $1-1.5 \mathrm{~mm}$ long, 0.33-0.66 length of spikelet, membranous, without keels.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous. Fertile lemma elliptic, 2-2.3 mm long, indurate, pallid, without keel. Lemma surface striate. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. North America.
Country /Province/State. Mexico. Central Mexico, Southwest Mexico.
Mexico State. Colima, Guerrero, Jalisco, Michoacan, Nayarit, Oaxaca.

Paspalum hirsutum Retz. Obs. Bot. ii. 7 (1781).
Accepted by: S-L Chen et al, Flora of China 22 (Poaceae) (2006).
TYPE from Taiwan. $\mathrm{T}:<$ Type of Basionym>: fide TROPICOS and Kew Synonomy Database: China: Taiwan?:, Bladh s.n. (HT: Lund, Sweden).

Illustrations (Books): S-L Chen et al, Flora of China, Illustrations, Poaceae (2007) (Fig. 738).
Derivation (Clifford \& Bostock 2007): L. hairy. Plant hairy in respect to all or some parts.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms slender, 20-40 cm long. Culminternodes distally pubescent or pilose (tomentose). Leaf-sheaths mostly shorter than adjacent culm internode, hirsute. Ligule an eciliate membrane, 2 mm long. Leaf-blade base simple. Leaf-blades lanceolate, $5-18 \mathrm{~cm}$ long, $3-5 \mathrm{~mm}$ wide. Leaf-blade surface hirsute, densely hairy, hairy on both sides. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Peduncle pubescent above (tomentose) or pilose above. Racemes 2-4, paired or digitate or borne along a central axis, $2-3 \mathrm{~cm}$ long. Central inflorescence
axis $1-2 \mathrm{~cm}$ long. Rhachis narrowly winged, flattened, 1.5 mm wide. Spikelet packing abaxial, regular, 2 rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, ciliate, with white hairs (soft).

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic (broadly), dorsally compressed, subacute, 22.3 mm long, falling entire. Spikelet callus glabrous.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets. Upper glume elliptic, 1 length of adjacent fertile lemma, 1 length of spikelet, membranous, without keels, $3-5$-veined. Upper glume margins eciliate or pubescent (minutely).

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic (broadly) or orbicular, 5-7 -veined, glabrous, acute. Fertile lemma elliptic (broadly) or orbicular, cartilaginous, light brown, dull, without keel. Lemma surface finely striate and punctate. Lemma apex obtuse.

Distribution (TDWG). Continent. Temperate Asia, South America.
Country /Province /State. China, Eastern Asia. China Southeast. Taiwan. Western South America. Colombia.

Guangdong, Guangxi.

TYPE from Venezuela. Basionym or Replaced Name: Thrasya stricta A.G.Burman, Acta Bot. Venezuel., 14(4): 75 (1987). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Otto Huber 974, 21 Aug 1977, Venezuela: Amazonas: terreno situado entre la carretera hacia Samariapo y la pista de aterrizaje del aeropuerto de Puerto Ayacucho, $5 ? 7$ 'N, $67 ? 6^{\prime} \mathrm{W}$, alt. ca. 75 m , sobre la Laja Grande, hierba hasta 0.5 m de alto, formando densas colonias (MO-2806206; IT: US-3107016).

Illustrations (Books): J.A.Steyermark et al, Flora of the Venezuelan Guayana Vol. 8 (2004) (286, Fig. 233 as Thrasya stricta).

Derivation (Clifford \& Bostock 2007): In honor of Otto Huber (1944-) Venezuelan botanist.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect or geniculately ascending, 70-90 cm long. Culm-nodes glabrous. Leaf-sheaths keeled. Ligule an eciliate membrane, 1.5 mm long. Leafblades flat or conduplicate, $10-15 \mathrm{~cm}$ long, $1-2 \mathrm{~mm}$ wide. Leaf-blade surface smooth or scaberulous, rough abaxially, glabrous. Leaf-blade margins glabrous. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes 1, single, arcuate, unilateral, 10 cm long. Rhachis broadly winged, folded longitudinally to embrace spikelets, 2 mm wide, glabrous on surface, tuberculate on margins, ciliate on margins, terminating in a barren extension, extension flattened. Rhachis hairs $3-4 \mathrm{~mm}$ long. Spikelet packing alternately adaxial and abaxial, regular, 1 -rowed. Spikelets pectinate, in pairs. Fertile spikelets sessile and pedicelled, 2 in the cluster. Pedicels present, fused to internode, united wholly.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, 2.9 mm long, 0.6 mm wide, falling entire.

Glumes. Glumes dissimilar, shorter than spikelet, thinner than fertile lemma. Lower glume oblate, 0.2 mm long, 0.07 length of spikelet, membranous, without keels, 0 -veined. Lower glume lateral veins absent. Lower glume apex truncate. Upper glume lanceolate, $1-1.5 \mathrm{~mm}$ long, $0.33-0.5$ length of spikelet, membranous, without keels, 1 -veined. Upper glume lateral veins absent. Upper glume apex attenuate.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret elliptic or oblong, 2.9 mm long, 1.2 length of fertile lemma, 1 length of spikelet, coriaceous, sulcate or readily splitting into two halves, ciliate on margins (above), bearing white hairs, acute. Palea of lower sterile floret becoming indurate on flanks at maturity. Fertile lemma elliptic or oblong, 2 mm long, coriaceous, without keel. Lemma surface papillose or striate, with conspicuous apical hairs. Lemma margins involute. Lemma apex acute. Palea coriaceous.

Flower and Fruit. Lodicules 2, fleshy, truncate. Anthers 3.
Distribution (TDWG). Continent. South America.
Country /Province/State. Northern South America, Brazil. Venezuela.

Paspalum hyalinum Nees ex Trin. Gram. Panic. 103. (1826).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: ST: In Brasilia (LE-TRIN-0473.01). P. hyalinum N. ab Es. In Brasilia 1. mis. am auctor. LT: K.F.P. von Martius s.n., Jul 1827, Brazil: Minas Gerais (LE; ILT: BM, M, SI (photo), US-2855279 (fragm. ex M), US-951762 (fragm. ex LE)). LT designated by F. Zuloaga \& O. Morrone, Cat. New. World Grass. 3: 476 (2003).

Recent Synonyms: Paspalum polychaetum Mez, Engl. Jahrb. 56 Beibl. 125, 11 (1921). Paspalum gossypinum Mez, Repert. Spec. Nov. Regni Veg. 15: 68 (191).

Illustrations (Books): S.A.Renvoize, Gramineas de Bolivia (1998) (483, Fig. 105), J.A.Steyermark et al, Flora of the Venezuelan Guayana Vol. 8 (2004) (234, Fig. 185), L.B. Smith, D.C. Wasshausen, R.M. Klein Flora Illustrada Catarinensis Gramineas (1981-1982) (1033, Fig. 201), E.Judziewicz, Flora of the Guianas, 187. Poaceae (1990) (493, Fig. 85).

Derivation (Clifford \& Bostock 2007): Gk. hyalos, glass; -ina, indicating resemblance. Margins of glumes, lemmas and sterile lemmas hyaline.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms geniculately ascending, 30-50 cm long, rooting from lower nodes. Leaves mostly basal. Ligule an eciliate membrane, 1 mm long. Leaf-blades $8-20$ cm long, 2-3.5 mm wide. Leaf-blade surface glabrous or pilose. Leaf-blade apex muticous or pungent.

Inflorescence. Inflorescence composed of racemes. Racemes 3-9, digitate, unilateral, 3-7 cm long. Rhachis angular, $0.3-0.6 \mathrm{~mm}$ wide, dark-coloured (purple), scabrous on margins. Spikelet packing abaxial, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, 0.5 mm long, glabrous or ciliate.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, 1-1.4 mm long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, hyaline, without keels, 2 -veined. Upper glume primary vein absent.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, hyaline, thicker on margins, 2 -veined, without midvein. Fertile lemma elliptic, 1-1.4 mm long, indurate, light brown, shiny, without keel. Lemma surface smooth. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province/State. Northern South America, Western South America, Brazil, Southern South America. Guyana, Surinam, Venezuela. Bolivia, Colombia, Peru. Brazil West Central, Brazil Northeast, Brazil Southeast, Brazil North, Brazil South. Paraguay.

Goias, Maranhao, Piaui, Minas Gerais, Rio de Janeiro, Espirito Santo, Sao Paulo Parana, Catarina, Rio Grande do Sul. Distrito Federal, Mato Grosso, Goiás. Bahia. Amazonas, Pará, Roraima, Tocantins. Minas Gerais, Sao Paulo. Paraná, Rio Grande do Sul, Santa Catarina.

Paspalum imbricatum T.S. Filgueiras. Bradea, 3(21): 153 (1981).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: G. Hatschbach 25281, 27 Oct 1970, Brasil: Mato Grosso: Mun. Sidrolandia: Rod. BR 163, orla de brejo (US2705820; IT: SI (photo)).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. imbricare, overlap like roof-tiles. The shorter branches bear densely overlapping spikelets.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, $80-105 \mathrm{~cm}$ long. Culm-nodes constricted. Leaf-sheaths outer margin glabrous or hairy. Ligule an eciliate membrane, $1-3 \mathrm{~mm}$ long, brown, ciliate from base of abaxial surface, truncate. Leaf-blades $20-40 \mathrm{~cm}$ long, $3-5 \mathrm{~mm}$ wide, stiff. Leafblade surface glabrous or pilose, with simple hairs or tubercle-based hairs. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes 3-6, digitate, unilateral, 6-10 cm long. Rhachis broadly winged, $2-3 \mathrm{~mm}$ wide, glabrous on margins, terminating in a barren extension, extension flattened. Spikelet packing abaxial, crowded, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, oblong, $0.5-1 \mathrm{~mm}$ long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, with cordate base, dorsally compressed, plano-convex, subacute, 5-6 mm long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, auriculate at base, 1 length of spikelet, membranous, without keels, winged on margins, 5 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret ovate, 1 length of spikelet, membranous, 7 -veined, acute. Fertile lemma elliptic, 3.5 mm long, indurate, pallid, without keel. Lemma surface smooth, puberulous. Lemma margins involute. Lemma apex acute. Palea involute, indurate. Palea keels puberulous.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil West Central.
Mato Grosso. Distrito Federal, Goiás, Mato Grosso do Sul.

Paspalum inaequivalve Raddi. Agrost. Bras. 28. (1823).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: G. Raddi s.n., no date, Brazil: Rio de Janeiro (PI; IT: BM, FI, G-Delessert, K, P, PI, US-2855285 (fragm. ex FI, PI \& photo)).

Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 1, Aristidoideae a Pharoideae (2012) (407), L.B. Smith, D.C. Wasshausen, R.M. Klein Flora Illustrada Catarinensis Gramineas (1981-1982) (1051, Fig. 205), A.Burkat, Flora Ilustrada de Entre Rios (Argentina), Pt II, Gramineas (1969) (395, Fig. 165), B.Rosengurtt, Gramineas UruguayasI (1970) (361, Fig. 155 as var. glabriflorum).

Derivation (Clifford \& Bostock 2007): L. in-, not; aequus, equal; valvus, leaf of a folding door. Glumes differing in size and nervation.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Stolons present. Culms decumbent, slender, 15-25 cm long, rooting from lower nodes. Leaf-sheaths glabrous on surface. Ligule an eciliate membrane, $1.2-2 \mathrm{~mm}$ long, erose, truncate. Leaf-blade base cordate, with a false petiole. Leaf-blades lanceolate, 4-18 cm long, $4-11 \mathrm{~mm}$ wide. Leaf-blade midrib conspicuous. Leaf-blade margins undulate.

Inflorescence. Inflorescence composed of racemes, terminal or terminal and axillary. Racemes 3-10, borne along a central axis, unilateral, $0.5-3 \mathrm{~cm}$ long. Central inflorescence axis $5-10 \mathrm{~cm}$ long. Rhachis angular, $0.5-0.8 \mathrm{~mm}$ wide, scabrous on margins. Spikelet packing 2-4 -rowed. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, oblong, unequal, $0.5-2 \mathrm{~mm}$ long, bearing a few hairs.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, 1.5-2 mm long, $0.7-0.9 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, 0.5 length of spikelet, membranous, dark brown, without keels, 3 -veined. Upper glume apex emarginate or truncate.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, dark green, 5 -veined, acute. Fertile lemma elliptic, $1.6-1.8 \mathrm{~mm}$ long, $0.6-0.8 \mathrm{~mm}$ wide, indurate, pallid, shiny, without keel. Lemma surface striate. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp, ellipsoid, 1 mm long, dark brown. Embryo 0.5 length of caryopsis. Hilum punctiform.

Paspalum inconstans Chase. Contrib. U. S. Nat. Herb. xxiv. 446 (1927).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Bolivia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: $O$. Buchtien 7107, 19 Nov 1922, Bolivia: Hacienda Casana, on the road to Tipuani, alt. 1400 m (US-1164822; IT: MO-941377).

Illustrations (Journals): Ann. Missouri Bot. Gard. (92: 507: Fig. 20 (2005)).
Derivation (Clifford \& Bostock 2007): L. variable. Leaf-blades vary in outline from sub-cordate to linear-lanceolate in outline.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms geniculately ascending, 45-85 cm long, without nodal roots or rooting from lower nodes. Culm-internodes elliptical in section, distally glabrous. Culm-nodes brown, glabrous or pubescent. Lateral branches lacking or sparse. Leaf-sheaths mostly shorter than adjacent culm internode, pubescent, outer margin hairy. Ligule an eciliate membrane, $1-2 \mathrm{~mm}$ long, brown. Leaf-blades $10-15 \mathrm{~cm}$ long, $6-13 \mathrm{~mm}$ wide. Leaf-blade surface puberulous, hairy on both sides. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes, terminal and axillary. Racemes 1-8, borne along a central axis, spreading, unilateral, $4-8 \mathrm{~cm}$ long. Central inflorescence axis $2-7 \mathrm{~cm}$ long, winged (above), pubescent (below). Rhachis narrowly winged, 1 mm wide, glabrous on surface or puberulous on surface. Spikelet packing abaxial. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, unequal, 1.5-2 mm long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or oblong, dorsally compressed, planoconvex, $2.2-3 \mathrm{~mm}$ long, 1.2 mm wide, falling entire.

Glumes. Glumes one to two the lower present in some spikelets, shorter than spikelet, thinner than fertile lemma. Lower glume 0.1-0.2 length of spikelet. Upper glume ovate, 0.8 length of spikelet, membranous, with hyaline margins, without keels, 3-5 -veined. Upper glume margins pubescent. Upper glume apex obtuse.

Florets. Basal sterile florets 1, male or barren, with palea or without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 3-5 -veined, eciliate on margins or pubescent on margins, obtuse. Fertile lemma elliptic, 2-2.8 mm long, indurate, pallid, without keel. Lemma surface striate. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province/State. Western South America. Bolivia, Colombia, Ecuador, Peru.

TYPE from Cuba. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: E.L. Ekman 11957, 29 Oct 1920, Cuba: La Habana, Santa Ana to Santa Clara (US-1298149).

Illustrations (Books): A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (221, Fig. 165).
Derivation (Clifford \& Bostock 2007): L. insula, island; -are, pertaining to. Island species.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, culms solitary or caespitose. Culms erect or geniculately ascending, slender, $40-55 \mathrm{~cm}$ long. Lateral branches lacking. Leaf-sheaths pilose, with tubercle-based hairs. Ligule an eciliate membrane, 1 mm long. Leaf-blades $6-16 \mathrm{~cm}$ long, $3-5 \mathrm{~mm}$ wide. Leaf-blade midrib prominent beneath. Leaf-blade surface pilose, hairy on both sides, with tubercle-based hairs.

Inflorescence. Inflorescence composed of racemes. Racemes 1-2, single or paired, straight or arcuate, unilateral, 3-6.5 cm long. Rhachis wingless, flattened, 1.5 mm wide. Spikelet packing abaxial. Racemebases brief, hirsute. Spikelets solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or obovate, dorsally compressed, planoconvex, obtuse, $2.5-2.6 \mathrm{~mm}$ long, $1.5-1.6 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface wrinkled. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5 -veined, obtuse. Fertile lemma elliptic, 2.3
mm long, indurate, yellow, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province/State. Caribbean. Cuba.

Paspalum intermedium Munro ex Morong. Ann. N. Y. Acad. Sci. vii. 258. (1893).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. -anum, indicating location. From Jalisco, Mexico.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, culms solitary or caespitose. Rhizomes elongated, scaly, hairy. Culms geniculately ascending, slender, 100 cm long. Culm-internodes distally glabrous. Culm-nodes glabrous or pubescent. Lateral branches lacking. Leaves mostly basal. Leaf-sheaths longer than adjacent culm internode, hirsute, with tubercle-based hairs, outer margin hairy. Ligule an eciliate membrane, 3 mm long. Leaf-blades $12-20 \mathrm{~cm}$ long, $12-15 \mathrm{~mm}$ wide. Leaf-blade midrib prominent beneath. Leaf-blade surface glabrous or pilose, hairy adaxially. Leaf-blade margins ciliate.

Inflorescence. Inflorescence composed of racemes. Racemes 5-12, borne along a central axis, unilateral, $4-7 \mathrm{~cm}$ long. Central inflorescence axis $6-8 \mathrm{~cm}$ long. Rhachis wingless, angular, $0.6-0.7 \mathrm{~mm}$
wide, glabrous on margins. Spikelet packing crowded, irregular. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, obtuse, $2.2-2.3 \mathrm{~mm}$ long, 1.3 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume surface pubescent, with tubercle-based hairs. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 3 -veined, concave across back, pubescent on midvein, obtuse. Fertile lemma ovate, 2.2 mm long, indurate, yellow, shiny, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. North America, South America.
Country /Province/State. Mexico. Central Mexico, Southwest Mexico, Southeast Mexico. Mesoamerica, Western South America. Costa Rica, Guatemala, Honduras. Colombia.

Distrito Federal. Hidalgo, Zacatecas. Jalisco, Michoacan. Chiapas.

Recent Synonyms: Paspalum perspicinervium Renv., Kew Bull. 42: 922 (1987).
Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 1, Aristidoideae a Pharoideae (2012) (411).

Derivation (Clifford \& Bostock 2007): L. -icum, belonging to. In honor of the Jesuit Order.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Stolons present. Basal innovations intravaginal. Culms decumbent, $30-60 \mathrm{~cm}$ long, $2-3$-noded. Culm-nodes black, glabrous. Leaf-sheaths mostly shorter than adjacent culm internode, striately veined, pilose. Ligule an eciliate membrane, $2-3 \mathrm{~mm}$ long. Leaf-blades lanceolate, $6-12 \mathrm{~cm}$ long, $6-10 \mathrm{~mm}$ wide. Leaf-blade surface pilose, sparsely hairy, hairy on both sides. Leaf-blade margins undulate.

Inflorescence. Inflorescence composed of racemes. Racemes 7-8, borne along a central axis, unilateral, $3-6 \mathrm{~cm}$ long. Central inflorescence axis $4-5 \mathrm{~cm}$ long. Rhachis narrowly winged, angular, $1.6-1.8 \mathrm{~mm}$ wide, with scattered hairs, glabrous on margins. Spikelet packing 4 -rowed. Raceme-bases pubescent. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, 0.5 mm long, scabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, 2.8 mm long, 1.5 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 3 -veined, acute. Fertile lemma ovate, gibbous, 2.5 mm long, indurate, yellow, without keel. Lemma surface punctate. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Lodicules 2, cuneate, 0.4 mm long. Anthers 3, $1-1.4 \mathrm{~mm}$ long, yellow.
Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil, Southern South America. Brazil Southeast, Brazil South.

TYPE from USA. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: A. Michaux s.n., no date, USA: Georgia (P-MICHX; IT: US-2855780 (fragm. ex P-MICHX \& photo)).

Illustrations (Books): M.E.Barkworth et al, Flora of North America north of Mexico Vol 25 Poaceae, part 2 (2003) (573), F.W.Gould, The Grasses of Texas (1975) (528, Fig. 277 as var. laeve), E.Hafliger \& E.Schultz, Grass Weeds, CIBA-GEIGY (1:99(1980)).

Derivation (Clifford \& Bostock 2007): L. smooth. Lacking hairs or roughness, usually of leaf-blades or lemmas.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect or geniculately ascending, 40-100 cm long. Leaf-sheaths keeled, glabrous on surface or pilose. Ligule an eciliate membrane, $1-3 \mathrm{~mm}$ long. Leaf-blades conduplicate, $5-30 \mathrm{~cm}$ long, $3-10 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pilose.

Inflorescence. Inflorescence composed of racemes. Racemes 3-5, borne along a central axis, unilateral, $4-10 \mathrm{~cm}$ long. Central inflorescence axis $4-10 \mathrm{~cm}$ long. Rhachis wingless, flattened. Spikelet packing abaxial, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $0.7-2 \mathrm{~mm}$ long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate or orbicular, dorsally compressed, 2.4-3.4 mm long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume orbicular, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, orbicular, 1 length of spikelet, membranous, 5-7 -veined, with unevenly spaced veins (near margins), obtuse. Fertile lemma orbicular, 2.4-3.4 mm long, indurate, yellow or light brown, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. North America.
Country /Province /State. North-central USA, Northeast USA, South-central USA, Southeastern USA. Illinois, Kansas, Missouri, Oklahoma. Massachusetts, Rhode Island. Texas. Alabama, Arkansas, Delaware, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, District of Columbia.

## Paspalum lamprocaryon K. Schum. Engl. Pflanzenw. Ost-Afr. C 100 (1895).

Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Tanzania. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Stuhlmann 3901, Tanzania: Bukoba (B).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): Gk. lampros, splendid; karyon, nut. Anthoecium glossy and chestnut brown.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Culms geniculately ascending, robust, 90-200 cm long, 37 mm diam., rooting from lower nodes. Leaf-sheaths longer than adjacent culm internode. Ligule an eciliate membrane. Leaf-blade base broadly rounded. Leaf-blades lanceolate, $8-30 \mathrm{~cm}$ long, $8-27 \mathrm{~mm}$ wide. Leafblade apex acute.

Inflorescence. Inflorescence composed of racemes. Racemes $2-11$, borne along a central axis, unilateral, $4-12 \mathrm{~cm}$ long. Central inflorescence axis $1-9 \mathrm{~cm}$ long. Rhachis broadly winged, $2-3 \mathrm{~mm}$ wide. Spikelet packing abaxial, regular, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or orbicular, dorsally compressed, planoconvex, obtuse, $2-2.7 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, 1 length of spikelet, membranous, dark brown, without keels, 5 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 7 -veined, obtuse. Fertile lemma ovate, gibbous, $2-2.5 \mathrm{~mm}$ long, indurate, dark brown, without keel, 5 -veined, more than 3-veined. Lemma surface striate. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1 mm long.
Distribution (TDWG). Continent. Africa.
Country /Province /State. West Tropical Africa, West-Central Tropical Africa, Northeast Tropical Africa, East Tropical Africa, South Tropical Africa. Rwanda, DRC. Chad, Ethiopia (inc. Eritrea), Sudan. Malawi, Zambia, Zimbabwe.

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. pretty. Plants with an attractive appearance as with colored spikelets.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose, clumped densely. Culms geniculately ascending, $20-45 \mathrm{~cm}$ long. Culm-internodes elliptical in section, distally glabrous or pilose. Culm-nodes glabrous or pubescent. Leaf-sheaths keeled, glabrous on surface or pubescent, outer margin hairy. Ligule an eciliate membrane, 1 mm long, brown. Leaf-blades $7-11 \mathrm{~cm}$ long, $5-10 \mathrm{~mm}$ wide. Leaf-blade surface pubescent, densely hairy, hairy on both sides. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes, terminal and axillary. Axillary inflorescences compact or enclosed. Racemes 3-4, borne along a central axis, ascending or spreading, unilateral, $2-5 \mathrm{~cm}$ long. Central inflorescence axis $2.5-4 \mathrm{~cm}$ long, pilose. Rhachis narrowly winged, 0.8 mm wide. Spikelet packing abaxial. Raceme-bases brief, pubescent. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, unequal, 1.5 mm long, pubescent.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, 2.3-2.4 mm long, 1.1 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure or two, shorter than spikelet, thinner than fertile lemma. Lower glume $0.1-0.2$ length of spikelet. Upper glume ovate, 0.9 length of spikelet, membranous, light brown or purple, without keels, 5 -veined. Upper glume surface puberulous, hairy above. Upper glume margins pubescent. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, light brown or purple, 5 -veined, pubescent, obtuse. Fertile lemma elliptic, 2.3-2.4 mm long, indurate, pallid, without keel. Lemma surface striate. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Western South America. Bolivia.
Paspalum leptachne Chase. Contrib. U. S. Nat. Herb. xxviii. 220 (1929).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Mexico. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: J.N. Rose 1961, 3 Aug 1897, Mexico: Nayarit: near Pedro Paulo (US-300853).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): Gk. leptos, narrow; achne, scale. Glumes narrow-lanceolate.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Rhizomes short, woody. Culms erect, 130-150 cm long. Culm-internodes elliptical in section. Lateral branches lacking. Leaf-sheaths loose, as wide as blade at the collar, outer margin hairy. Ligule an eciliate membrane, $1.5-2 \mathrm{~mm}$ long, lacerate. Leaf-blades $20-30 \mathrm{~cm}$ long, $7-10 \mathrm{~mm}$ wide. Leaf-blade surface puberulous, hairy adaxially.

Inflorescence. Inflorescence composed of racemes. Racemes 8-9, borne along a central axis, ascending, unilateral, $5-13 \mathrm{~cm}$ long. Central inflorescence axis 15 cm long. Rhachis wingless, angular, 1.71.8 mm wide. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, 3 mm long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, subacute, 2.6 mm long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, hyaline, light brown, without keels, 5 -veined. Upper glume lateral veins obscure. Upper glume surface puberulous. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, hyaline, light brown, 5 -veined, obscurely veined, smooth or wrinkled (near margins), obtuse. Fertile lemma elliptic, 2.6 mm long, indurate, dark brown, without keel. Lemma surface papillose. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. North America.
Country /Province /State. Mexico. Gulf (Mexico), Northwest Mexico, Southwest Mexico.
Veracruz. Sinaloa. Nayarit.

Illustrations (Books): S.A.Renvoize, The Grasses of Bahia, 1984 (210, Fig. 78).
Derivation (Clifford \& Bostock 2007): L. ligula, small tongue; -aris, pertaining to. Ligule conspicuous.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms $50-120 \mathrm{~cm}$ long. Ligule an eciliate membrane, $2.8-5 \mathrm{~mm}$ long. Leaf-blades flat or conduplicate, $16-60 \mathrm{~cm}$ long, $1.5-5 \mathrm{~mm}$ wide. Leaf-blade surface scabrous, glabrous or pilose, sparsely hairy. Leaf-blade margins scabrous. Leaf-blade apex attenuate.

Inflorescence. Inflorescence composed of racemes. Racemes 2-7, borne along a central axis, unilateral, $6-16 \mathrm{~cm}$ long. Rhachis scaberulous on margins. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, oblong.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong or obovate, dorsally compressed, planoconvex, $2-3 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, shorter than spikelet or reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, $0.75-1$ length of spikelet, membranous, without keels, 3 veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 3 -veined, acute. Fertile lemma elliptic, 2-3 mm long, indurate, pallid, shiny, without keel. Lemma surface granulose. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.

TYPE from Argentina. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: M. Lillo 10526, 7 Oct 1910, Argentina: Misiones: Salto Iguaz?(W; IT: G, LIL, US-2855787 (fragm. ex W)).

Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 1, Aristidoideae a Pharoideae (2012) (413).

Derivation (Clifford \& Bostock 2007): in honor of Miguel Lillo (1862-1931) Argentine botanist.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Culms erect, 40 cm long, 2 -noded. Culm-internodes distally glabrous. Ligule an eciliate membrane, $2-4 \mathrm{~mm}$ long, truncate. Leaf-blades $20-30 \mathrm{~cm}$ long, 4-6 mm wide. Leaf-blade surface glabrous. Leaf-blade apex attenuate.

Inflorescence. Inflorescence composed of racemes. Racemes 5, borne along a central axis, unilateral, $3-7 \mathrm{~cm}$ long. Central inflorescence axis $3-4 \mathrm{~cm}$ long. Rhachis narrowly winged, angular, 1.5 mm wide. Spikelet packing abaxial, lax, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, oblong, 1 mm long, glabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate, dorsally compressed, plano-convex, acute, $5-6 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume lanceolate, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume margins ciliate (below). Upper glume apex acuminate.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret lanceolate, 1 length of spikelet, membranous, 3 -veined, ciliate on margins, fringed below, acuminate. Fertile lemma lanceolate, 5-6 mm long, indurate, pallid, without keel, 3 -veined, $0-3$-veined. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1.5 mm long. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil, Southern South America. Brazil South. Paraguay.
Paraná. Misiones.

TYPE from Paraguay. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Paraguay, Villa Rica: Balansa 107 (L holo, G, P).

Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 1, Aristidoideae a Pharoideae (2012) (414).

Derivation (Clifford \& Bostock 2007): L. limbus, border; -ata, possessing. Glumes or lemmas colored differently on their margins and centres.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rhizomes short. Culms erect, 35-50 cm long, 2 mm diam., $2-3$-noded. Culm-internodes terete, $3-5 \mathrm{~cm}$ long, striate, distally glabrous. Culm-nodes brown, glabrous. Leaf-sheaths $5-7 \mathrm{~cm}$ long, longer than adjacent culm internode, keeled, glabrous on surface. Ligule an eciliate membrane, $1.2-2.4 \mathrm{~mm}$ long. Leaf-blades flat or conduplicate, $10-20 \mathrm{~cm}$ long, $1-2 \mathrm{~mm}$ wide. Leaf-blade surface glabrous, hairless throughout or except near base. Leaf-blade margins scabrous. Leaf-blade apex acute.

Inflorescence. Inflorescence composed of racemes. Peduncle glabrous. Racemes 2-4, borne along a central axis, unilateral, $2-3 \mathrm{~cm}$ long. Central inflorescence axis $3-4 \mathrm{~cm}$ long. Rhachis wingless, angular, 0.4 mm wide, glabrous on surface, scabrous on margins, terminating in a sterile spikelet. Spikelet packing 4 -rowed. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, unequal, $0.4-0.6 \mathrm{~mm}$ long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, obtuse, $1.6-1.8 \mathrm{~mm}$ long, $1-1.1 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface puberulous. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, thicker on margins, thinner along midline, 5 veined, smooth, obtuse. Fertile lemma elliptic, gibbous, $1.5-1.7 \mathrm{~mm}$ long, 1 mm wide, indurate, dark brown, without keel. Lemma surface papillose. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Lodicules $2,0.2 \mathrm{~mm}$ long.
$2 n=20$ ( 1 ref TROPICOS).
Distribution (TDWG). Continent. South America.
Country /Province /State. Southern South America. Paraguay.

Paspalum lindenianum A.Rich. Fl. Cub. Fanerog. ii. 299. (1850).

TYPE from Cuba. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: J.J. Linden 1813, May 1844, Cuba: Oriente, Santa Maria (P; IT: NY-71049 (possible), US-80152 (fragm. ex P)). T: J.J. Linden 1813, May 1844, Cuba: Oriente (US-80063). Also type of (and filed as) Paspalum longiflorum Steudel.

Recent Synonyms: Paspalum longifolium Roxb., Hort. Beng. 7; Fl. Ind. i. 280 (1820).
Illustrations (Books): A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (220, Fig. 163).
Derivation (Clifford \& Bostock 2007): L. -ana, indicating connection. In honor of Jean Jules Linden (1817-1898) Luxembourg-born Belgian botanist.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose, clumped densely. Culms 30-80 cm long, wiry, 2 -noded. Leaf-sheaths glabrous on surface, outer margin hairy. Ligule an eciliate membrane, 0.2 mm long. Leaf-blades filiform, 20-50 cm long, 1 mm wide. Leaf-blade surface glabrous. Leaf-blade margins ciliate, hairy at base.

Inflorescence. Inflorescence composed of racemes. Racemes 1-2(-4), single or paired or borne along a central axis, straight or arcuate, unilateral, $3-14 \mathrm{~cm}$ long. Central inflorescence axis $0.5-2 \mathrm{~cm}$ long. Rhachis wingless, semiterete. Spikelet packing abaxial. Spikelets solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the
lower floret male or barren, the upper fertile. Spikelets ovate or rhomboid, dorsally compressed, planoconvex, acute, $2.5-2.8 \mathrm{~mm}$ long, $1.7-1.8 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 7 -veined. Upper glume surface wrinkled. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5 -veined, wrinkled, acute. Fertile lemma elliptic, 2 mm long, 1.4 mm wide, indurate, yellow, without keel. Lemma surface striate. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Tropical Asia, South America.
Country /Province /State. Indo-China, Malesia, Papuasia. Thailand. Borneo, Java, Lesser Sunda Is, Sumatra, Sulawesi, Malaya, Philippines. New Guinea. Caribbean. Cayman Is, Cuba, Dominican Republic, Haiti, Jamaica.

Derivation (Clifford \& Bostock 2007): L. longus, long; arista, bristle. Lemmas or glumes long awned. Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Annual, caespitose. Culms 15-36 cm long, 4-9 -noded. Culminternodes distally glabrous. Culm-nodes pubescent. Leaves cauline. Leaf-sheaths without keel, pilose, with tubercle-based hairs. Ligule a fringe of hairs, $0.7-1.6 \mathrm{~mm}$ long. Leaf-blades $4-8.2 \mathrm{~cm}$ long, $1-2 \mathrm{~mm}$ wide. Leaf-blade midrib prominent beneath. Leaf-blade surface hirsute, with tubercle-based hairs. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Peduncle glabrous or pubescent above. Racemes $1-2$, single or paired, arcuate, unilateral, $3-6.8 \mathrm{~cm}$ long. Central inflorescence axis $1.3-2 \mathrm{~cm}$ long, tip without extension or filiform $(0-3 \mathrm{~mm})$. Rhachis broadly winged, membranous, folded longitudinally to embrace spikelets, $4.5-6 \mathrm{~mm}$ wide, dark-coloured (purple), pilose on surface, ciliate on margins, terminating in a barren extension, extension flattened. Spikelet packing abaxial. Raceme-bases brief, pilose. Spikelets solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate or elliptic, dorsally compressed, 1.8-2.2 mm long, 0.5 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, $1.8-2.2 \mathrm{~mm}$ long, 1 length of spikelet, hyaline, without keels, 3 -veined. Upper glume surface pubescent, hairy below. Upper glume margins ciliate. Upper glume awned, 1 -awned, awn 6-12.2 mm long.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, hyaline, 3 -veined, pubescent, hairy at base, ciliate on margins, awned. Awn of lower sterile floret $0.3-2 \mathrm{~mm}$ long. Fertile lemma elliptic, $1.5-1.8 \mathrm{~mm}$ long, coriaceous, pallid, without keel, 5 -veined, more than 3-veined. Lemma lateral veins obscure. Lemma margins involute, scaberulous. Lemma apex acute. Palea involute, coriaceous.

Flower and Fruit. Anthers 3, $1.4-1.9 \mathrm{~mm}$ long. Caryopsis with adherent pericarp, $1-1.2 \mathrm{~mm}$ long. Embryo 0.6-0.7 length of caryopsis. Hilum punctiform.

Distribution (TDWG). Continent. South America.
Country /Province/State. Brazil. Brazil West Central.
Goiás.

Paspalum longicuspe Nash. $N$. Amer. $F l$. xvii. 172 (1912).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Mexico. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: C.G. Pringle 3854, 2 Oct 1891, Mexico: Jalisco: floating in water near Guadalajara (NY; IT: B, BM, ISC, MEXU, MO-2977069, P, US-824334, US-1649839 (fragm. ex B)).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. longus, long; cuspis, point. Rhachis extending beyond the spikelet as a short stalk.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Culms prostrate, $100-150 \mathrm{~cm}$ long, spongy, rooting from lower nodes. Leaf-sheaths inflated. Ligule an eciliate membrane, 3 mm long, brown. Leaf-blades 6-16 cm long, $6-12 \mathrm{~mm}$ wide. Leaf-blade surface scabrous.

Inflorescence. Inflorescence composed of racemes. Racemes numerous, 30-80, borne along a central axis, unilateral, $2-4 \mathrm{~cm}$ long. Central inflorescence axis $5-12 \mathrm{~cm}$ long. Rhachis deciduous from axis, broadly winged, foliaceous, folded longitudinally to embrace spikelets, $2-2.5 \mathrm{~mm}$ wide, scabrous on margins, terminating in a barren extension, extension flattened, extension $10-15 \mathrm{~mm}$ long. Spikelet packing abaxial, regular, 1 -rowed. Raceme-bases linear, $2-5 \mathrm{~mm}$ long. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, acuminate, $2.2-2.6 \mathrm{~mm}$ long, 1.1 mm wide, falling entire, deciduous with accessory branch structures.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, hyaline, without keels.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, hyaline, mid-green or red (at base). Fertile lemma elliptic, 2 mm long, indurate, pallid, shiny, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. North America.
Country /Province/State. Mexico. Northwest Mexico, Southwest Mexico, Southeast Mexico.

Derivation (Clifford \& Bostock 2007): L. longus, long; folium, leaf. With long leaf-blades.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, 30-130 cm long. Culm-nodes glabrous. Leaf-sheaths keeled, glabrous on surface or hirsute, outer margin glabrous or hairy. Ligule an eciliate membrane, $1-2 \mathrm{~mm}$ long. Leaf-blades $3-9 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or hirsute. Leafblade margins scabrous.

Inflorescence. Inflorescence composed of racemes. Racemes (1-)2-5(-12), digitate or borne along a central axis, spreading, unilateral, $1.5-6.5 \mathrm{~cm}$ long. Central inflorescence axis $1-10 \mathrm{~cm}$ long. Rhachis broadly winged, with sharp-edged midrib, 1.7-3 mm wide, scabrous on margins. Spikelet packing regular, 4 -rowed. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, oblong, 0.3-0.8 mm long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, plano-convex, obtuse, $1.7-2.7 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume obovate, 1 length of spikelet, chartaceous, without keels, 3 -veined. Upper glume surface glabrous or puberulous. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, chartaceous, 3 -veined, glabrous or puberulous, obtuse. Fertile lemma elliptic or obovate, gibbous, $1.6-2.4 \mathrm{~mm}$ long, indurate, dark brown, shiny, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1-1.2 mm long.

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. longus, long; pilus, a hair. Plant with long hairs investing all or any of its parts.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culm-internodes elliptical in section. Leafsheaths keeled, hirsute. Ligule an eciliate membrane, $1.5-2 \mathrm{~mm}$ long. Leaf-blades erect, conduplicate, 1520 cm long, $7-10 \mathrm{~mm}$ wide. Leaf-blade surface pubescent, densely hairy, hairy adaxially.

Inflorescence. Inflorescence composed of racemes. Racemes 2-4, borne along a central axis, ascending or spreading, unilateral, $5-7 \mathrm{~cm}$ long. Rhachis narrowly winged, flattened. Spikelet packing abaxial, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, 2.75 mm long, 2.25 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 5 -veined.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5 -veined. Fertile lemma elliptic, 2.75 mm long, indurate, yellow, without keel. Lemma surface papillose. Lemma margins involute. Palea involute, indurate.

Distribution (TDWG). Continent. North America.
Country/Province/State. Southeastern USA. Florida.

TYPE from Mexico. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: H.L. Mason 1648, 7 May 1925, Mexico. Revillagigedo Islands (CAS; IT: US-1449808).

Illustrations: None found.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, 80-100 cm long. Culm-internodes elliptical in section, distally glabrous. Culm-nodes glabrous. Lateral branches lacking. Leaf-sheaths as wide as blade at the collar, without keel, smooth, glabrous on surface, outer margin hairy. Ligule an eciliate membrane, 3 mm long, pilose on abaxial surface. Leaf-blades ascending, $70-100 \mathrm{~cm}$ long, $8-10 \mathrm{~mm}$ wide. Leaf-blade midrib conspicuous. Leaf-blade surface scabrous, rough adaxially, glabrous. Leaf-blade margins scabrous, tuberculate-ciliate, hairy at base. Leaf-blade apex attenuate.

Inflorescence. Inflorescence composed of racemes, shorter than basal leaves, exserted or embraced at base by subtending leaf. Racemes $9-13$, borne along a central axis, unilateral, $8-12 \mathrm{~cm}$ long. Central inflorescence axis $12-18 \mathrm{~cm}$ long. Rhachis wingless, angular, 1 mm wide, puberulous on surface, scabrous on margins. Spikelet packing crowded. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, angular.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic to ovate, dorsally compressed, plano-convex, obtuse or subacute, $2.8-2.9 \mathrm{~mm}$ long, 2 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic or ovate, 1 length of spikelet, hyaline, without keels, 3 -veined. Upper glume surface papillose. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic or ovate, 1 length of spikelet, hyaline, 3 -veined, papillose, obtuse. Fertile lemma elliptic or obovate, 2.5 mm long, 1.6 mm wide, indurate, yellow, without keel. Lemma surface papillose. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. North America.
Country /Province/State. Mexico. Southwest Mexico.

Recent Synonyms: Paspalum eitenii Swallen, Phytologia 14: 385 (1967).
Illustrations: None found.
Derivation (Clifford \& Bostock 2007): Gk. makros, large; phyllon, leaf. Leaf-blades large.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths glabrous or pilose. Culms 100150 cm long. Lateral branches sparse, arising from upper culm. Leaf-sheaths glabrous on surface, outer margin glabrous or hairy. Ligule an eciliate membrane. Leaf-blades lanceolate, 15-39 cm long, 15-25 mm wide. Leaf-blade surface glabrous or hispid, with tubercle-based hairs. Leaf-blade margins scabrous, glabrous or ciliate.

Inflorescence. Inflorescence composed of racemes. Racemes 5-15, borne along a central axis, unilateral, $5-10 \mathrm{~cm}$ long. Rhachis wingless, angular, 1 mm wide. Spikelets in pairs. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or obovate, dorsally compressed, 2-2.7 mm long, 1.4 mm wide, falling entire.

Glumes. Glumes one to two the lower present in some spikelets, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface pubescent.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 3-5 -veined, glabrous or pubescent. Fertile lemma elliptic, $2-2.5 \mathrm{~mm}$ long, indurate, yellow, without keel. Lemma surface papillose or striate. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. Pacific, South America.

Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: R.M. Harley, S.A. Renvoize, C.M. Erskine \& C.A. Brighton 16724, 4 Mar 1974, Brazil: Estado de Bahia: Serra do Curral Feio: elev. 950-1000 m (CEPEC; IT: K, LE, MO-3426089, NY-214695, U, UB, US-3260304). Ex Herbario Kewensi.

Illustrations (Books): S.A.Renvoize, The Grasses of Bahia, 1984 (207, Fig. 76).
Derivation (Clifford \& Bostock 2007): L. madeo, be wet. Growing in damp sandy soil.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Rhizomes elongated. Culms 30-40 cm long. Ligule an eciliate membrane. Leaf-blades conduplicate, $9-22 \mathrm{~cm}$ long, $2-4 \mathrm{~mm}$ wide. Leaf-blade apex acute.

Inflorescence. Inflorescence composed of racemes. Racemes 2-4, paired or digitate, unilateral, 4-6 cm long. Central inflorescence axis $1-2 \mathrm{~cm}$ long. Rhachis scaberulous on margins. Spikelet packing abaxial. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, oblong.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong or obovate, dorsally compressed, planoconvex, 2.5 mm long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 3 -veined, acute. Fertile lemma elliptic, 2.5 mm long, indurate, pallid, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil Northeast.
Bahia. Bahia.

Paspalum malacophyllum Trin. $S p$. Gram. Ic. iii. t. 271. (1836).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), S-L Chen et al, Flora of China 22 (Poaceae) (2006), W.D.Clayton \& N.Snow, Key to Pacific Grasses (2010).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Brazil: Cuyaba, Chapada, April 1829, G.H. von Langsdorff s.n. (HT: LE; IT: K, LE, US).

Recent Synonyms: Paspalum tenuifolium Swallen, Phytologia, 14: 384 (1967).
Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 1, Aristidoideae a Pharoideae (2012) (416), M.E.Barkworth et al, Flora of North America north of Mexico Vol 25 Poaceae, part 2 (2003) (585), S.A.Renvoize, Gramineas de Bolivia (1998) (452, Fig 98), L.B. Derivation (Clifford \& Bostock 2007): Gk. malakos, soft to the touch; phyllon, leaf. Leaf-blades velvety-pilose.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Rhizomes short, scaly. Culms 70-200 cm long. Ligule an eciliate membrane, 2 mm long. Leaf-blades $8-35 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pubescent, hairy on both sides.

Inflorescence. Inflorescence composed of racemes. Racemes numerous, 10-45, borne along a central axis, unilateral, $2-10 \mathrm{~cm}$ long. Central inflorescence axis $10-30 \mathrm{~cm}$ long. Rhachis narrowly winged, angular. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the
lower floret male or barren, the upper fertile. Spikelets elliptic or oblong, dorsally compressed, planoconvex, $1.8-2 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes both absent or obscure.
Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret ovate, 1 length of spikelet, membranous, 3 -veined or 5 -veined, obtuse. Fertile lemma elliptic, gibbous, $1.8-2 \mathrm{~mm}$ long, indurate, without keel, 7 -veined, more than 3 -veined. Lemma surface papillose. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. $2 n=40$ ( 3 refs TROPICOS).
Distribution (TDWG). Continent. Temperate Asia, North America, South America.
Country /Province /State. China. China North-Central. Hawaii (*). Mexico. Northeast Mexico, Gulf (Mexico), Southeast Mexico. Mesoamerica, Western South America, Brazil, Southern South America. Bolivia. Brazil West Central, Brazil Northeast, Brazil Southeast, Brazil North, Brazil South. Argentina Northwest, Paraguay.

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Brazil: In Brasilia, Princeps Sereniss. Maximilian Neowidensis s.n. (HT: B?).

Illustrations (Books): A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (233, Fig. 184), S.A.Renvoize, Gramineas de Bolivia (1998) (474, Fig. 103), S.A.Renvoize, The Grasses of Bahia, 1984 (224, Fig. 83), J.A.Steyermark et al, Flora of the Venezuelan Guayana Vol. 8 (2004) (233, Fig. 183), L.B. Smith, D.C. Wasshausen, R.M. Klein Flora Illustrada Catarinensis Gramineas (1981-1982) (1004, Fig. 196 \& 1019, Fig. 198).

Illustrations (Journals): Rodriguesia (63: 947, Fig. 6 (2012)).
Derivation (Clifford \& Bostock 2007): L. mille, one thousand; granum, grain. Inflorescence of many spikelets.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths spongy. Culms erect or geniculately ascending, robust, $90-200 \mathrm{~cm}$ long. Lateral branches lacking. Leaf-sheaths longer than adjacent culm internode, as wide as blade at the collar, reticulately veined, glabrous on surface. Leaf-sheath oral hairs ciliate. Ligule an eciliate membrane, $1.5-2 \mathrm{~mm}$ long. Collar glabrous or pilose. Leaf-blades conduplicate, $30-75 \mathrm{~cm}$ long, $7-15 \mathrm{~mm}$ wide. Leaf-blade surface scabrous, rough abaxially, glabrous or pubescent, hairy adaxially, with tubercle-based hairs. Leaf-blade margins spinulose. Leaf-blade apex attenuate.

Inflorescence. Inflorescence composed of racemes. Racemes few or numerous, 6-60, borne along a central axis, simply spaced, ascending or spreading, unilateral, $6-16 \mathrm{~cm}$ long. Central inflorescence axis 630 cm long. Rhachis wingless, angular, $0.9-1.2 \mathrm{~mm}$ wide, scabrous on margins, ciliate on margins. Spikelet packing crowded, irregular. Raceme-bases brief, pilose. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets orbicular, dorsally compressed, plano-convex, obtuse, $2-2.4 \mathrm{~mm}$ long, 2 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume orbicular, 1 length of spikelet, membranous, purple, without keels, 3 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, orbicular, 1 length of spikelet, membranous, purple, 3 -veined, obtuse. Fertile lemma orbicular, $2-2.1 \mathrm{~mm}$ long, indurate, pallid, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. North America, South America.

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: A.F.M. Glaziou 20131, no date, Brazil: Minas Gerais (W; IT: K, P, US-2855817 (fragm. ex W)).

Illustrations (Books): S.A.Renvoize, The Grasses of Bahia, 1984 (216, Fig. 80).
Derivation (Clifford \& Bostock 2007): from Minas Gerais Province, Brazil.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, slender, 30-60 cm long. Leafsheath oral hairs ciliate. Ligule an eciliate membrane. Leaf-blades flat or involute, $13-21 \mathrm{~cm}$ long, $1-2 \mathrm{~mm}$ wide. Leaf-blade surface pilose, sparsely hairy. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes 1-7, borne along a central axis, unilateral, $4-10 \mathrm{~cm}$ long. Central inflorescence axis $2-8 \mathrm{~cm}$ long. Rhachis flattened. Spikelet packing abaxial. Raceme-bases hirsute. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, oblong.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong or obovate, dorsally compressed, planoconvex, $1.7-2 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 2 -veined. Upper glume primary vein absent. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 2 -veined, without midvein, acute. Fertile lemma elliptic, 1.7-2 mm long, indurate, pallid, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.

Derivation (Clifford \& Bostock 2007): L. less. Smaller in stature than a related species.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, mat forming. Rhizomes elongated, woody, scaly. Culms decumbent, $27-53 \mathrm{~cm}$ long, $1-2 \mathrm{~mm}$ diam. Culm-internodes distally glabrous. Culm-nodes constricted, brown, glabrous. Lateral branches lacking. Leaves mostly basal. Leaf-sheaths as wide as blade at the collar, keeled, glabrous on surface, outer margin hairy. Leaf-sheath oral hairs ciliate. Ligule an eciliate membrane, $0.2-0.7 \mathrm{~mm}$ long, brown. Leaf-blades $8-14 \mathrm{~cm}$ long, $4-7 \mathrm{~mm}$ wide, light green. Leaf-blade midrib prominent beneath. Leaf-blade surface glabrous or pilose, hairy adaxially, with tubercle-based hairs. Leafblade margins tuberculate-ciliate, hairy at base. Leaf-blade apex abruptly acute.

Inflorescence. Inflorescence composed of racemes. Peduncle pilose above, tipped by a glumaceous appendage. Racemes 2 , paired, unilateral, $4-7 \mathrm{~cm}$ long. Rhachis narrowly winged, $0.8-1 \mathrm{~mm}$ wide. Spikelet packing abaxial, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, 0.5 mm long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate or obovate, dorsally compressed, obtuse, 2.42.5 mm long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, 1 length of spikelet, membranous, without keels, 3(-5) -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 3 -veined, obtuse. Fertile lemma elliptic or obovate, $2.1-2.2 \mathrm{~mm}$ long, indurate, pallid, without keel. Lemma surface striate. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 0.9-1.2 mm long, purple. Caryopsis with adherent pericarp, ellipsoid, 1.4 mm long.

## Illustrations: None found.

Derivation (Clifford \& Bostock 2007): In honor of Phillipe Morat (1937-) French botanist.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, short-lived, caespitose. Culms erect, 50-70 cm long, 4-6 noded. Leaf-sheaths outer margin hairy. Ligule an eciliate membrane, 0.8 mm long. Leaf-blades $5-25 \mathrm{~cm}$ long, $7-11 \mathrm{~mm}$ wide. Leaf-blade surface pilose, sparsely hairy, hairy adaxially. Leaf-blade margins ciliate. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes 2, paired, unilateral, 3-7.5 cm long. Central inflorescence axis $0.5-1 \mathrm{~cm}$ long. Rhachis broadly winged, with sharp-edged midrib, 2 mm wide. Spikelet packing abaxial, regular, 2 -rowed. Spikelets solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets orbicular, dorsally compressed, plano-convex, obtuse, $2.2-3.1 \mathrm{~mm}$ long, $2-2.5 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume orbicular, 1 length of spikelet, chartaceous, light brown, without keels, 5 -veined. Upper glume surface wrinkled. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, chartaceous, light green, 5 -veined, obtuse. Fertile lemma orbicular, gibbous, $2.2-3.1 \mathrm{~mm}$ long, indurate, light brown, shiny, without keel, 5 -veined, more than 3veined. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Stigmas white.

## Distribution (TDWG). Continent. Pacific.

Country /Province /State. Southwestern Pacific. New Caledonia.

Paspalum morichalense G. Davidse, F.O. Zuloaga \& T.S. Filgueiras. Novon, 5(3): 234 (1995).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Venezuela. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: G. Davidse 3770, 6 Nov 1973, Venezuela: Guárico: ca. 32 km SSE of Calabozo on Finca Becerra, in and around morichal with standing water, morichal dominated by Mauritia flexuosa, 65 m , culms widely creeping, on mud and in shallow water (MO-2616314; IT: AAU, K, LE, MEXU, MG, PRE, SI, US3321545, VEN).

Illustrations (Journals): Novon (5:235, Fig. 1 (1995) as Panicum).
Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. Growing around morichales, the Venezuelan name for palm swamps.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Stolons present. Culms decumbent, 13-25 cm long, spongy, rooting from lower nodes. Culm-internodes $13-25 \mathrm{~cm}$ long, distally glabrous. Culm-nodes brown, glabrous or pubescent. Leaves cauline. Leaf-sheaths $2-8 \mathrm{~cm}$ long, keeled, glabrous on surface. Ligule an eciliate membrane, $0.6-2 \mathrm{~mm}$ long, truncate. Collar glabrous. Leaf-blades spreading or reflexed, linear or lanceolate, $3.5-11 \mathrm{~cm}$ long, $1.5-3 \mathrm{~mm}$ wide. Leaf-blade surface smooth or scaberulous, rough adaxially. Leaf-blade margins scaberulous.

Inflorescence. Inflorescence composed of racemes, embraced at base by subtending leaf. Peduncle 2 cm long. Racemes $1-2$, single or paired, unilateral, 3-6 cm long. Rhachis broadly winged, foliaceous, folded longitudinally to embrace spikelets, $1.1-3.5 \mathrm{~mm}$ wide, scaberulous on margins. Spikelet packing abaxial, lax, 1.1-1.2 their length apart, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $0.3-0.5 \mathrm{~mm}$ long, scabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, concavo-convex, subacute, $2.1-2.9 \mathrm{~mm}$ long, $0.9-1.1 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1.1-1.2 length of adjacent fertile lemma, 1 length of spikelet, membranous, without keels, 3-5 -veined.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 5 -veined. Fertile lemma elliptic, $2.1-2.8 \mathrm{~mm}$ long, indurate, pallid, shiny, without keel. Lemma surface smooth. Lemma margins involute. Lemma apex acute, papillose. Palea involute, indurate.

Flower and Fruit. Lodicules 2, 0.3 mm long, truncate. Anthers $3,0.5-0.8 \mathrm{~mm}$ long, purple. Stigmas 2, purple. Caryopsis with adherent pericarp, ellipsoid, 1.6-1.8 mm long. Embryo 0.33 length of caryopsis. Hilum linear, 0.66 length of caryopsis.

Distribution (TDWG). Continent. South America.
Country /Province/State. Northern South America, Western South America, Brazil. Surinam, Venezuela. Bolivia, Colombia. Brazil West Central, Brazil Northeast, Brazil North, Brazil Southeast.

Mato Grosso, Mato Grosso do Sul. Bahia. Amapa, Pará. Minas Gerais.

Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From Mosquitia region, sometimes called Costa de Miskitos, of Nicaragua and Honduras.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect or geniculately ascending or decumbent, $65-110 \mathrm{~cm}$ long, without nodal roots or rooting from lower nodes. Culm-internodes distally pubescent. Culm-nodes bearded. Leaf-sheaths glabrous on surface or puberulous. Ligule an eciliate membrane, $1.5-2.4 \mathrm{~mm}$ long. Leaf-blades $16-32 \mathrm{~cm}$ long, $9-16 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or puberulous, hairy adaxially.

Inflorescence. Inflorescence composed of racemes. Peduncle glabrous or pubescent above. Racemes 1, single, unilateral, $1-16 \mathrm{~cm}$ long. Rhachis narrowly winged, folded longitudinally to embrace spikelets, $2-$ 2.8 mm wide, glabrous on surface, scaberulous on margins, terminating in a spikelet. Spikelet packing alternately adaxial and abaxial, regular, 1 -rowed. Spikelets pectinate, in pairs. Fertile spikelets sessile and pedicelled, 2 in the cluster. Pedicels present, fused to internode, united wholly, $1.8-3 \mathrm{~mm}$ long, puberulous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, acute, $3.4-4 \mathrm{~mm}$ long, $1.4-1.8 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes dissimilar, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, 0.6 2.5 mm long, $0.2-0.66$ length of spikelet, hyaline, without keels, $0-1$-veined. Lower glume lateral veins absent. Lower glume apex obtuse, muticous or awned, 1 -awned, awn $0.7-1.2 \mathrm{~mm}$ long. Upper glume elliptic, 2.8-3.4 mm long, 0.75 length of spikelet, chartaceous, without keels, $5(-7)$-veined. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, coriaceous, sulcate or readily splitting into two halves, acute. Palea of lower sterile floret becoming indurate on flanks at maturity. Fertile lemma elliptic, $3-3.6 \mathrm{~mm}$ long, coriaceous, without keel. Lemma margins involute. Lemma apex acute, pubescent. Palea coriaceous.

Flower and Fruit. Anthers 3, 1.3-1.9 mm long, purple.
Distribution (TDWG). Continent. South America.
Country /Province /State. Mesoamerica. Honduras, Nicaragua.

Paspalum motembense Leon. Bull. Torr. Bot. Cl. 1926, Iiii. 457. (1926).
TYPE from Cuba. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: León \& Loustalot 9354, 9 Aug 1920, Cuba. Santa Clara: Sabana de Motembo (NY; IT: US-2942544 (fragm. \& photo)). US fragment has only a single damaged spikelet.

Illustrations (Books): A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (237, Fig. 191).
Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From Sabana de Motembo, Cuba.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Rhizomes short. Culms erect, 60 cm long. Lateral branches lacking. Leaves without demarcation between sheath and blade. Leaf-sheaths longer than adjacent culm internode, wider than blade at the collar, keeled. Ligule an eciliate membrane, $1-1.5 \mathrm{~mm}$ long. Leaf-blades conduplicate, $20-30 \mathrm{~cm}$ long, $5-8 \mathrm{~mm}$ wide. Leaf-blade surface glabrous. Leaf-blade apex attenuate.

Inflorescence. Inflorescence composed of racemes. Racemes 6-10, borne along a central axis, unilateral, $4.5-5 \mathrm{~cm}$ long. Central inflorescence axis 15 cm long. Rhachis wingless, angular, 1 mm wide. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, obtuse, 2.5 mm long, $1.2-1.4 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, light brown, without keels, 5 -veined. Upper glume surface puberulous, hairy below. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, light brown, 3 -veined, obtuse. Fertile lemma elliptic, 2.3 mm long, indurate, dark brown, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Caribbean. Cuba.
Paspalum multicaule Poir. Encyc. Suppl. iv. 309. (1816).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: R.L. Desfontaines \& A.N. Desvaux s.n., no date, Brazil (FI; IT: P, US-2942541 (fragm. ex FI)).

Illustrations (Books): A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (223, Fig. 169), S.A.Renvoize, The Grasses of Bahia, 1984 (230, Fig. 85), W.Burger, Flora Costaricensis 15, Gramineae: Fieldiana Botany New Series 4 (1980) (410, Fig 149).

Illustrations (Journals): Ruizia (13:363 Fig 46a-d (1993)).
Derivation (Clifford \& Bostock 2007): L. multus, many; caulis, stem. Culms much branched.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Annual, caespitose. Culms $12-40 \mathrm{~cm}$ long, 1 mm diam. Culminternodes thick-walled, distally glabrous. Culm-nodes glabrous. Leaf-sheaths keeled, glabrous on surface or pilose, with tubercle-based hairs, outer margin hairy. Ligule an eciliate membrane, $0.3-0.5 \mathrm{~mm}$ long, brown. Leaf-blades revolute, $4-12 \mathrm{~cm}$ long, $1.5-2.5 \mathrm{~mm}$ wide. Leaf-blade midrib prominent beneath. Leafblade surface pilose, hairy on both sides, with tubercle-based hairs.

Inflorescence. Inflorescence composed of racemes. Peduncle tipped by a glumaceous appendage. Racemes 2, paired, unilateral, $1-4 \mathrm{~cm}$ long. Rhachis narrowly winged, $0.5-0.7 \mathrm{~mm}$ wide. Spikelet packing abaxial, 2 -rowed. Raceme-bases brief, pubescent. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets orbicular, dorsally compressed, $1.1-1.5 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, 1 length of spikelet, membranous, without keels, 2-3 -veined. Upper glume primary vein absent or distinct. Upper glume surface puberulous, with clavate hairs (globular).

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 2 -veined, without midvein, eciliate on margins or ciliolate on margins (globular hairs). Fertile lemma ovate, $0.5-0.7 \mathrm{~mm}$ long, indurate, pallid, without keel. Lemma surface striate. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 0.3 mm long, purple. Caryopsis with adherent pericarp, orbicular, planoconvex, $0.8-1 \mathrm{~mm}$ long.
$2 n=20$ ( 1 ref TROPICOS).
Distribution (TDWG). Continent. North America, South America.
Country /Province /State. Mexico. Central Mexico, Northeast Mexico, Gulf (Mexico), Southwest Mexico, Southeast Mexico. Mesoamerica, Caribbean, Northern South America, Western South America, Brazil. Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Rhizomes elongated. Butt sheaths sparsely hairy. Culms $20-70 \mathrm{~cm}$ long. Leaf-sheaths striately veined. Ligule an eciliate membrane, $0.5-2.5 \mathrm{~mm}$ long. Leaf-blades conduplicate, $4-5 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pubescent.

Inflorescence. Inflorescence composed of racemes. Racemes 2-5, borne along a central axis, unilateral, $1.5-6.5 \mathrm{~cm}$ long. Rhachis angular, 0.8 mm wide. Spikelet packing $2-4$-rowed. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, oblong, $0.5-1 \mathrm{~mm}$ long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, 2.7-3.3 mm long, $1.6-1.8 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface pubescent. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 5 -veined, wrinkled, acute. Fertile lemma obovate, $2.5-3 \mathrm{~mm}$ long, $1.4-$ 1.7 mm wide, indurate, dark brown, shiny, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp, obovoid, 1.8 mm long. Hilum elliptic.
$2 n=40$ ( 1 ref TROPICOS).
Distribution (TDWG). Continent. Australasia (*), North America, South America.
Country /Province /State. Australia (*). New South Wales (*). Southeastern USA. Alabama, Florida, Georgia. Brazil, Southern South America. Brazil South. Argentina Northeast, Paraguay, Uruguay.

Coast. Catarina, Rio Grande do Sul. Santa Catarina. Buenos Aires, Chaco, Cordoba, Corrientes, Entre Rios, Formosa, Santa Fe.

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Brazil: Goiás: Municipio de Niquelândia, ca. 14.18'S-48.23'W, morro pedregoso, ca. 2 km Leste da localidade de Macedo, planta cresendo entre pedras, próximo a pequena floresta de galeria, ocasional na área, 19 Maio, 1993, T.S. Filgueiras \& F.C. de A. Oliveira 2461 (HT: IBGE; IT: F, G, ICN, K, MEXU, MG, MO, R, SI, SP, US).

Illustrations (Journals): Novon (5:31, Fig. 1 (1995)).
Derivation (Clifford \& Bostock 2007): From Municipio Niquelandia, Brazil.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rhizomes short, knotty, scaly. Culms erect, 120-185 cm long, 5-8 -noded. Culm-internodes thin-walled, distally glabrous. Culm-nodes glabrous. Lateral branches lacking. Leaves cauline. Leaf-sheaths striately veined, hispid, with tubercle-based hairs, outer margin hairy. Leaf-sheath oral hairs ciliate, $5-8 \mathrm{~mm}$ long. Ligule an eciliate membrane, $0.2-0.3 \mathrm{~mm}$ long, brown. Leaf-blades lanceolate, $20-45 \mathrm{~cm}$ long, $8-22 \mathrm{~mm}$ wide. Leaf-blade midrib prominent beneath. Leaf-blade surface glabrous or hispid, with tubercle-based hairs. Leaf-blade margins serrulate, glabrous or ciliate. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Peduncle 12-22 cm long. Racemes 8-30, borne along a central axis, arcuate, unilateral, $2.5-8.5 \mathrm{~cm}$ long. Central inflorescence axis $9-15 \mathrm{~cm}$ long. Rhachis angular, $1-1.5 \mathrm{~mm}$ wide, glabrous on margins or ciliate on margins. Spikelet packing 4 -rowed. Racemebases pilose. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, unequal, $0.1-0.3 \mathrm{~mm}$ long, scabrous, tip discoid.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate or elliptic, dorsally compressed, planoconvex, acute, 2.3-3.3 mm long, $1-1.2 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume surface glabrous to pubescent. Upper glume margins villous. Upper glume hairs $0.3-0.7 \mathrm{~mm}$ long. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 3 -veined, glabrous to pubescent. Fertile lemma elliptic, $2.2-2.7 \mathrm{~mm}$ long, chartaceous, pallid, without keel, 5 -veined, more than 3-veined. Lemma lateral veins obscure.

Lemma surface papillose, with distinct germination flap. Lemma margins involute. Lemma apex acute. Palea involute, chartaceous.

Flower and Fruit. Lodicules 2, $0.1-0.2 \mathrm{~mm}$ long. Anthers 3, $1.2-2 \mathrm{~mm}$ long. Caryopsis with adherent pericarp, 1.8-1.9 mm long. Embryo 0.5-0.66 length of caryopsis. Hilum punctiform.

Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil West Central.
Goiás.

Paspalum orbiculatum Poir. Encyc. v. 32 (1804).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Puerto Rico. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: A.P. Ledr? \& E.P. Ventenat s.n., 1798, Puerto Rico (P-LA; IT: B, FI, P, US-2855756 (fragm. ex P-LA)).

Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3-1, Aristidoideae a Pharoideae (2012) (421), A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (225, Fig. 174), S.A.Renvoize, Gramineas de Bolivia (1998) (459, Fig. 99), S.A.Renvoize, The Grasses of Bahia, 1984 (230, Fig. 85), J.A.Steyermark et al, Flora of the Venezuelan Guayana Vol. 8 (2004) (236, Fig. 190), W.Burger, Flora Costaricensis 15, Gramineae: Fieldiana Botany New Series 4 (1980) (433, Fig. 161).

Illustrations (Journals): Ruizia (13:366 Fig 471-o (1993)).
Derivation (Clifford \& Bostock 2007): L. orbiculus, round; -ata, possessing. Spikelets circular in outline.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Stolons present. Culms decumbent, 5-13 cm long, 0.5-1 mm diam., rooting from lower nodes. Culm-internodes thin-walled, distally glabrous. Culm-nodes glabrous or pubescent. Lateral branches ample. Leaf-sheaths outer margin hairy. Leaf-sheath oral hairs ciliate. Ligule an eciliate membrane, $0.1-0.2 \mathrm{~mm}$ long. Leaf-blade base broadly rounded, with a brief petiole-like connection to sheath. Leaf-blades lanceolate, $1-6 \mathrm{~cm}$ long, $1-5 \mathrm{~mm}$ wide.

Inflorescence. Inflorescence composed of racemes. Racemes 2-4, paired or digitate, unilateral, 0.8-2.4 cm long. Central inflorescence axis $0.4-0.6 \mathrm{~cm}$ long. Rhachis narrowly winged, $0.5-0.7 \mathrm{~mm}$ wide. Spikelet packing abaxial, regular, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets orbicular, dorsally compressed, $0.9-1.2 \mathrm{~mm}$ long, $0.8-1 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume orbicular, 1 length of spikelet, membranous, without keels, 2 -veined. Upper glume primary vein absent. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, orbicular, 1 length of spikelet, membranous, 2 -veined, without midvein, obtuse. Fertile lemma ovate, $0.9-1.2 \mathrm{~mm}$ long, indurate, red, without keel. Lemma surface striate. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 0.3 mm long, purple. Caryopsis with adherent pericarp, orbicular, 0.70.8 mm long.

Paspalum oreophilum A.G.Burman) S.Denham. Ann. Missouri Bot. Gard. 92(4): 513 (2005).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online (as Thrasya), W.D.Clayton \& K.Harman, GrassBase (2008) and online (as Thrasya).

Basionym or Replaced Name: Thrasya oreophila A.G.Burman, Brittonia, 34(4): 458 (1982).
Illustrations: None found.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, $60-120 \mathrm{~cm}$ long. Culm-nodes bearded. Leaf-sheaths keeled, glabrous on surface or pilose, with tubercle-based hairs, outer margin hairy. Ligule an eciliate membrane, 2 mm long, pilose on abaxial surface. Leaf-blades $6-30 \mathrm{~cm}$ long, $4-9 \mathrm{~mm}$ wide. Leaf-blade surface glabrous. Leaf-blade margins tuberculate-ciliate. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes 1-3, single or borne along a central axis, arcuate, unilateral, $9-16 \mathrm{~cm}$ long. Rhachis narrowly winged, folded longitudinally to embrace spikelets, 2 mm wide, glabrous on surface or puberulous on surface, tuberculate on margins, ciliate on margins, terminating in a barren extension, extension flattened. Rhachis hairs $5-10 \mathrm{~mm}$ long. Spikelet packing alternately adaxial and abaxial, regular, 1 -rowed. Spikelets pectinate, in pairs. Fertile spikelets sessile and pedicelled, 2 in the cluster. Pedicels present, fused to internode, united wholly.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, 4 mm long, 1.4 mm wide, falling entire.

Glumes. Glumes dissimilar, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, 1.2 mm long, 0.33 length of spikelet, hyaline, without keels, 0 -veined. Lower glume lateral veins absent. Lower glume apex acute. Upper glume elliptic, 0.75 length of spikelet, membranous, without keels, (5-)7veined. Upper glume lateral veins with cross-veins, all extending to apex or excurrent. Upper glume margins eciliate or ciliolate. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, coriaceous, sulcate or readily splitting into two halves, glabrous or pilose, hairy above, acute. Palea of lower sterile floret becoming indurate on flanks at maturity. Fertile lemma elliptic, 3.5 mm long, coriaceous, without keel. Lemma surface striate. Lemma margins involute. Lemma apex acute, pubescent. Palea coriaceous.

Flower and Fruit. Lodicules 2, fleshy, truncate. Anthers 3.
Distribution (TDWG). Continent. South America. Country /Province /State. Brazil. Brazil Southeast.
Minas Gerais.

TYPE from Venezuela. Basionym or Replaced Name: Thrasya paspaloides Kunth, Nov. Gen. Sp. (quarto ed.) 1: 121, t. 39 (1815) [1816]
. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: LT: Humboldt \& Bonpland 16 1/2, May, Venezuela (B-W-1618; ILT: US (fragm.)). LT designated by Burman, Bot. J. Linn. Soc. 82: 339-341 (1981).

Recent Synonyms: Thrasya paspaloides H. B. \& K., Nov. Gen. et Sp. i. 121. t. 39 (1815).
Illustrations (Books): A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (179, Fig. 114 as Thrasya paspaloides), J.A.Steyermark et al, Flora of the Venezuelan Guayana Vol. 8 (2004) (285, Fig. 231 as Thrasya paspaloides).

Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From Alto Orinoca, Venezuela.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, $15-70 \mathrm{~cm}$ long. Culm-nodes bearded. Leaf-sheaths keeled, glabrous on surface or pilose, with tubercle-based hairs. Ligule an eciliate membrane, 1.3 mm long, erose. Leaf-blades linear or lanceolate, $5-15 \mathrm{~cm}$ long, $2-3 \mathrm{~mm}$ wide. Leaf-blade surface pubescent, hairy on both sides. Leaf-blade margins ciliate.

Inflorescence. Inflorescence composed of racemes. Racemes 1, single, arcuate, unilateral, 1-11 cm long. Rhachis broadly winged, folded longitudinally to embrace spikelets, 3 mm wide, glabrous on surface, tuberculate on margins, ciliate on margins, terminating in a barren extension, extension flattened. Rhachis hairs $3-4 \mathrm{~mm}$ long. Spikelet packing alternately adaxial and abaxial, regular, 1 -rowed. Spikelets pectinate, in pairs. Fertile spikelets sessile and pedicelled, 2 in the cluster. Pedicels present, fused to internode, united wholly.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, 2.9-3.1 mm long, 0.8 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 2.9-3.1 mm long, 1.1 length of adjacent fertile lemma, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface pilose, hairy generally, with tubercle-based hairs. Upper glume margins ciliate. Upper glume hairs yellow, $1.5-2 \mathrm{~mm}$ long. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret elliptic or oblong, 2.93.1 mm long, 1 length of spikelet, chartaceous, sulcate or readily splitting into two halves, with basal tufts of hair, 1 hair tufts in all, ciliate on margins (above), acute. Palea of lower sterile floret becoming indurate on flanks at maturity. Fertile lemma elliptic, $2-3 \mathrm{~mm}$ long, coriaceous, without keel. Lemma surface striate, with conspicuous apical hairs. Lemma margins involute. Lemma apex acute. Palea coriaceous.

Flower and Fruit. Lodicules 2, fleshy, truncate. Anthers 3.
Distribution (TDWG). Continent. South America.
Country /Province /State. Caribbean, Northern South America, Western South America, Brazil. Venezuela. Colombia.

Distrito Federal.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Basal innovations intravaginal. Culms 80-200 cm long, $2-5$-noded. Culm-nodes glabrous. Leaves without demarcation between sheath and blade. Leafsheaths glabrous on surface. Ligule an eciliate membrane, 2 mm long. Leaf-blades $20-40 \mathrm{~cm}$ long, $8-15$ mm wide. Leaf-blade surface scabrous, glabrous.

Inflorescence. Inflorescence composed of racemes. Racemes 10-12, borne along a central axis, unilateral, $10-15 \mathrm{~cm}$ long. Central inflorescence axis $5-10 \mathrm{~cm}$ long. Rhachis angular. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, oblong.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate or elliptic, dorsally compressed, planoconvex, obtuse, $3-3.5 \mathrm{~mm}$ long, 1.5 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume lateral veins distinct. Upper glume surface glabrous. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 5 -veined, distinctly veined, glabrous, acute. Fertile lemma elliptic, 3-3.5 mm long, indurate, yellow, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.

Derivation (Clifford \& Bostock 2007): L. panus, thread; -ula, diminutive; -ata, possessing. Inflorescence open with thread-like pedicels.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms $30-215 \mathrm{~cm}$ long. Ligule an eciliate membrane, 2-3 mm long. Leaf-blades $9-50 \mathrm{~cm}$ long, $6-25 \mathrm{~mm}$ wide.

Inflorescence. Inflorescence composed of racemes. Racemes few or numerous, 7-60, borne along a central axis, unilateral, $4-12 \mathrm{~cm}$ long. Central inflorescence axis $5-20(-30) \mathrm{cm}$ long. Rhachis narrowly winged, angular, 0.5 mm wide. Spikelet packing regular, 4 -rowed. Spikelets in pairs. Fertile spikelets sessile and pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets orbicular, dorsally compressed, plano-convex, obtuse, $1.3-1.4 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume orbicular, 1 length of spikelet, membranous, dark brown, without keels, 3 -veined. Upper glume surface puberulous. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 3 -veined, puberulous, obtuse. Fertile lemma orbicular, gibbous, hemispherical, $1-1.2 \mathrm{~mm}$ long, indurate, pallid, without keel. Lemma surface striate. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Poaceae (1990) (493, Fig. 85).

Derivation (Clifford \& Bostock 2007): L. parvus, small; flos, flower. Spikelets small or with few florets.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Annual, caespitose. Culms $5-14 \mathrm{~cm}$ long, $0.2-0.5 \mathrm{~mm}$ diam. Culminternodes thick-walled, purple, distally glabrous. Leaf-sheaths keeled, pilose, with tubercle-based hairs. Ligule an eciliate membrane, $0.1-0.2 \mathrm{~mm}$ long. Leaf-blades flat or conduplicate, $0.5-1 \mathrm{~mm}$ wide. Leafblade midrib prominent beneath. Leaf-blade surface pilose, with tubercle-based hairs. Leaf-blade margins tuberculate-ciliate.

Inflorescence. Inflorescence composed of racemes. Racemes 1-3, single or borne along a central axis, unilateral, $1-1.5 \mathrm{~cm}$ long. Central inflorescence axis $0-1 \mathrm{~cm}$ long. Rhachis wingless, angular, $0.3-0.4 \mathrm{~mm}$ wide. Spikelet packing abaxial, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, reduced to a stump, ciliate, hairy at tip.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or obovate, dorsally compressed, obtuse, $0.6-0.7 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 2 -veined. Upper glume primary vein absent. Upper glume margins ciliolate. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 2 -veined, without midvein, with unevenly spaced veins (near margin), ciliolate on margins. Fertile lemma ovate, $0.6-0.7 \mathrm{~mm}$ long, indurate, yellow, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 0.3-0.5 mm long, orange. Caryopsis with adherent pericarp.

Paspalum parvulum A.G.Burman) S.Denham. Ann. Missouri Bot. Gard. 92(4): 513 (2005).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online (as Thrasya), W.D.Clayton \& K.Harman, GrassBase (2008) and online (as Thrasya).

Basionym or Replaced Name: Thrasya parvula A.G.Burman, Brittonia, 32(2): 217 (1980).
Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. parvus, small; -ula, diminutive. Dwarf in habit.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.

Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, $40-55 \mathrm{~cm}$ long. Culm-nodes glabrous. Lateral branches lacking. Leaf-sheaths keeled, glabrous on surface or puberulous. Ligule an eciliate membrane, 2 mm long, erose. Leaf-blades $2.5-12 \mathrm{~cm}$ long, $1.5-2.5 \mathrm{~mm}$ wide. Leaf-blade surface puberulous, hairy on both sides. Leaf-blade margins glabrous. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes 1, single, arcuate, unilateral, 2-4.5 cm long. Rhachis broadly winged, 3.5 mm wide, glabrous on surface, scaberulous on margins, terminating in a barren extension, extension flattened. Spikelet packing alternately adaxial and abaxial, regular, 1 -rowed. Spikelets pectinate, in pairs. Fertile spikelets sessile and pedicelled, 2 in the cluster. Pedicels present, fused to internode, united wholly, pubescent.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, acute, $1.4-1.6 \mathrm{~mm}$ long, 0.7 mm wide, falling entire.

Glumes. Glumes dissimilar, shorter than spikelet, thinner than fertile lemma. Lower glume oblate, 0.3 mm long, 0.2 length of spikelet, hyaline, without keels, 0 -veined. Lower glume lateral veins absent. Lower glume apex truncate. Upper glume oblate, 0.4 mm long, 0.25 length of spikelet, membranous, without keels, 1 -veined. Upper glume primary vein absent. Upper glume lateral veins absent. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, chartaceous, sulcate, acute. Fertile lemma elliptic, $1.4-1.6 \mathrm{~mm}$ long, coriaceous, without keel. Lemma surface papillose. Lemma margins involute. Lemma apex acute. Palea coriaceous. Palea surface papillose.

Flower and Fruit. Lodicules 2, fleshy, truncate. Anthers 3.
Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil North.

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): in honor of Morton Eaton Peck (1871-1951) United States botanist.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Culms erect, 72-82 cm long. Culm-internodes distally glabrous. Culm-nodes pubescent. Leaf-sheaths keeled, glabrous on surface, outer margin hairy. Ligule an eciliate membrane, $2-3 \mathrm{~mm}$ long. Collar pubescent. Leaf-blades erect, flat or conduplicate, $14-30 \mathrm{~cm}$ long, $5-8 \mathrm{~mm}$ wide. Leaf-blade midrib prominent beneath. Leaf-blade surface puberulous, sparsely hairy, hairy on both sides. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes 2-3, paired or digitate, arcuate, unilateral, $6-13 \mathrm{~cm}$ long. Central inflorescence axis $1-3.5 \mathrm{~cm}$ long. Rhachis narrowly winged, angular, 2 mm wide, with scattered hairs, scabrous on margins. Raceme-bases brief, pubescent. Spikelets in pairs. Fertile spikelets sessile and pedicelled. Pedicels present, pubescent.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or obovate, dorsally compressed, concavoconvex, 2.7 mm long, 1.2 mm wide, falling entire.

Glumes. Glumes one to two the lower present in some spikelets, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, $0-0.5$ length of spikelet, $0-1$-veined. Lower glume lateral veins absent. Lower glume apex acute. Upper glume elliptic, 0.9 length of spikelet, membranous, without keels, 5 veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, male or barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, hyaline, 5 -veined, concave across back, obtuse. Palea of lower sterile floret 1 length of lemma. Fertile lemma elliptic, 2.2 mm long, indurate, without keel. Lemma surface striate. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Mesoamerica. Belize, Honduras.

Illustrations (Books): S.A.Renvoize, Gramineas de Bolivia (1998) (452, Fig 98), J.A.Steyermark et al, Flora of the Venezuelan Guayana Vol. 8 (2004), L.B. Smith, D.C. Wasshausen, R.M. Klein Flora Illustrada Catarinensis Gramineas (1981-1982) (918 \& 926, Fig 184 \& 186), W.Burger, Flora Costaricensis 15, Gramineae: Fieldiana Botany New Series 4 (1980) (437, Fig 163), E.Judziewicz, Flora of the Guianas, 187. Poaceae (1990) (469, Fig 83), R.Pilger, Die Naturlichen Pflanzenfamilien 14e (1940) (67, Fig. 38).

Derivation (Clifford \& Bostock 2007): L. pecten, comb; -ata, possessing. The margins of the sterile lemmas bear a series of stiff hairs.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose, clumped densely. Butt sheaths persistent and investing base of culm, with fibrous dead sheaths. Culms $30-100 \mathrm{~cm}$ long, $1.5-2.5 \mathrm{~mm}$ diam. Culminternodes thin-walled, distally glabrous. Lateral branches lacking. Leaf-sheaths pilose. Leaf-sheath oral hairs ciliate, $4-8 \mathrm{~mm}$ long. Ligule an eciliate membrane, $0.5-1 \mathrm{~mm}$ long, brown. Leaf-blades revolute, 1165 cm long, $3-7 \mathrm{~mm}$ wide. Leaf-blade midrib prominent beneath. Leaf-blade surface pilose, densely hairy, hairy on both sides.

Inflorescence. Inflorescence composed of racemes. Peduncle pubescent above. Racemes 2, paired, unilateral, 5-7 cm long. Rhachis broadly winged, membranous, 2-2.5 mm wide, pubescent on margins,
terminating in a barren extension, extension flattened. Spikelet packing abaxial, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, with cordate base, dorsally compressed, 4.65.7 mm long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, auriculate at base, 1 length of spikelet, membranous, without keels, winged on margins, winged all along, 3 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 0.9 length of spikelet, membranous, 3 -veined, glabrous or pilose, with tuberclebased hairs, tuberculate on margins, ciliate on margins, fringed all along, bearing hairs $1.5-2 \mathrm{~mm}$ long, acute. Fertile lemma ovate, $3.5-4.5 \mathrm{~mm}$ long, coriaceous, pallid, without keel. Lemma margins involute. Lemma apex acute, pubescent. Palea involute, coriaceous.

Flower and Fruit. Anthers 3, 2.2 mm long. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. North America, South America.
Country /Province /State. Mexico. Gulf (Mexico), Southwest Mexico, Southeast Mexico. Mesoamerica, Northern South America, Western South America, Brazil. Belize, Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua, Panama. Guyana, Surinam, Venezuela. Bolivia, Colombia, Peru. Brazil West Central, Brazil Southeast, Brazil North, Brazil South.

Paspalum penicillatum Hook. f. Trans. Linn. Soc. xx. 171. (1847).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Ecuador: Galapagos Islands. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: LT: C. Darwin s.n., Sep 1835, Ecuador: Galapagos Islands: Charles Island (CGE; ILT: K, US-2942530 (fragm. ex K)). LT designated by Porter, Bot. J. Linn. Soc. 81 : 96 (1980).

Illustrations (Books): S.A.Renvoize, Gramineas de Bolivia (1998) (462, Fig 100).
Derivation (Clifford \& Bostock 2007): L. penicillus, a small brush; -ata, possessing. With racemes arising in verticils.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Annual. Culms decumbent, 7-20 cm long. Lateral branches ample. Ligule an eciliate membrane. Leaf-blades lanceolate, $3-10 \mathrm{~cm}$ long, $5-12 \mathrm{~mm}$ wide. Leaf-blade surface pubescent, moderately hairy.

Inflorescence. Inflorescence composed of racemes. Racemes 3-9, borne along a central axis, unilateral, $1-1.7 \mathrm{~cm}$ long. Rhachis deciduous from axis, narrowly winged, 1.7 mm wide, terminating in a barren extension, extension flattened. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, oblong.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or oblong, dorsally compressed, planoconvex, $1.7-1.9 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, sulcate, acute. Fertile lemma elliptic, $1.7-1.9 \mathrm{~mm}$ long, indurate, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Northern South America, Western South America. Venezuela. Bolivia, Colombia, Ecuador, Peru.

TYPE from Guyana. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: A.W. Bartlett 8569, Sep 1906, Guyana: Essequibo, Konawaruk R. (US-1298462; IT: K).

Illustrations (Books): J.A.Steyermark et al, Flora of the Venezuelan Guayana Vol. 8 (2004) (232, Fig. 180), E.Judziewicz, Flora of the Guianas, 187. Poaceae (1990) (503, Fig 86).

Derivation (Clifford \& Bostock 2007): L. slender. Culms very slender.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms rambling, 15-22 cm long, rooting from lower nodes. Culm-nodes bearded. Leaf-sheaths outer margin hairy. Ligule an eciliate membrane, 1-1.3 mm long, acute. Leaf-blades 6-11 cm long, 3.5-4.5 mm wide.

Inflorescence. Inflorescence composed of racemes, terminal and axillary. Peduncle $2-5 \mathrm{~cm}$ long. Racemes 1, single, arcuate, unilateral, $1-2.2 \mathrm{~cm}$ long. Rhachis angular, $0.4-0.6 \mathrm{~mm}$ wide, smooth on margins. Spikelet packing 2 -rowed. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, $0.4-$ 0.7 mm long, scabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or obovate, dorsally compressed, planoconvex, acute, $1.4-1.7 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes two, shorter than spikelet, thinner than fertile lemma. Lower glume oblate, 0.3-0.4 mm long, $0.2-0.3$ length of spikelet. Lower glume margins ciliolate. Lower glume apex obtuse. Upper glume elliptic, $0.9-1.3 \mathrm{~mm}$ long, $0.66-0.75$ length of spikelet, membranous, without keels, 5 -veined. Upper glume surface pubescent, hairy on veins. Upper glume margins ciliolate. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 3 -veined, ciliolate on margins. Fertile lemma elliptic, $1.3-1.6 \mathrm{~mm}$ long, indurate, yellow, without keel. Lemma surface granulose. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Northern South America, Brazil. Brazil North.
Pará.

Paspalum petrense A.G.Burman. Kew Bull, 35(2): 297 (1980).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: T. S. Filgueiras \& A. G. Burman 430, 8 Apr 1979, Brazil. Goias: Serra dos Pirineus, ca. 20 km E of Pirenopolis (K; IT: IBGE, SP, RB-217458).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. petra, rock; -ense, denoting origin. Growing amongst exposed rocks.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, $40-80 \mathrm{~cm}$ long. Culm-internodes distally glabrous or pilose. Culm-nodes glabrous. Lateral branches lacking. Leaf-sheaths keeled, pilose, with tubercle-based hairs. Ligule an eciliate membrane, 1 mm long, truncate. Leaf-blades $10-17 \mathrm{~cm}$ long, $2-5 \mathrm{~mm}$ wide. Leaf-blade surface pubescent, hairy on both sides.

Inflorescence. Inflorescence composed of racemes. Racemes 3-5, borne along a central axis, straight or arcuate, unilateral, 3-6 cm long. Rhachis broadly winged, foliaceous, 7 mm wide, dark-coloured (green to purple). Spikelets in pairs. Fertile spikelets pedicelled, subequal or the lower smaller. Pedicels present, flattened, puberulous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, 3.5 mm long, 1.1 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume surface scabrous, rough at apex, hirsute, hairy below. Upper glume margins ciliate. Upper glume apex acuminate.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 3 -veined, hirsute, hairy below, ciliate on margins, acuminate. Fertile lemma elliptic, 3 mm long, cartilaginous, pallid, shiny, without keel. Lemma margins involute. Lemma apex pubescent. Palea involute, cartilaginous.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil North.
Goiás.

Illustrations (Books): S.A.Renvoize, Gramineas de Bolivia (1998) (510, Fig. 114 as Thrasya petrosa), S.A.Renvoize, The Grasses of Bahia, 1984 (239, Fig. 89 as Thrasya petrosa), J.A.Steyermark et al, Flora of the Venezuelan Guayana Vol. 8 (2004) (284, Fig. 229 as Thrasya petrosa).

Derivation (Clifford \& Bostock 2007): L. petra, rock; -osa, full of. Growing in rocky places.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths pubescent (tomentose). Culms erect, $70-85 \mathrm{~cm}$ long. Culm-internodes distally glabrous. Leaf-sheaths pilose. Ligule an eciliate membrane. Leaf-blades curved, involute, $15-35 \mathrm{~cm}$ long. Leaf-blade surface pubescent, hairy adaxially.

Inflorescence. Inflorescence composed of racemes. Racemes 5-8, borne along a central axis, unilateral, $4-5 \mathrm{~cm}$ long. Central inflorescence axis $4-8 \mathrm{~cm}$ long. Rhachis narrowly winged, angular, $0.4-0.5 \mathrm{~mm}$ wide, glabrous on surface. Spikelets solitary or in pairs. Fertile spikelets pedicelled. Pedicels present, oblong, 0.5 mm long, pubescent.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, plano-convex, subacute, $1.8-1.9 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume primary vein conspicuous. Upper glume surface glabrous. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 5 -veined, with conspicuous midvein, glabrous, acute. Fertile lemma elliptic, 1.8-1.9 mm long, indurate, shiny, without keel. Lemma surface smooth. Lemma margins involute. Palea involute, indurate.

Distribution (TDWG). Continent. South America.
Country /Province /State. Western South America, Brazil. Colombia. Brazil West Central, Brazil Northeast, Brazil North.

Illustrations (Journals): Systematic Botany (33: 268, Fig. 1 (2008)).
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Annual. Culms erect or geniculately ascending or decumbent, 18-28 cm long, $0.8-0.9 \mathrm{~mm}$ diam., rooting from lower nodes. Culm-internodes distally glabrous. Culm-nodes purple, glabrous. Leaf-sheaths $1-6 \mathrm{~cm}$ long, keeled, striately veined, glabrous on surface. Leaf-sheath oral hairs ciliate. Ligule an eciliate membrane, $0.5-0.7 \mathrm{~mm}$ long, erose, acute. Leaf-blades lanceolate, $4.5-5.5$ cm long, 2 mm wide. Leaf-blade surface ribbed, grooved adaxially. Leaf-blade margins ciliate, hairy at base. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Peduncle $4.5-9 \mathrm{~cm}$ long, glabrous. Racemes 2, paired, flexuous, unilateral, $2-4 \mathrm{~cm}$ long. Rhachis narrowly winged, angular, 0.4 mm wide, glabrous on surface. Spikelet packing abaxial, lax, 2 -rowed. Raceme-bases hirsute. Spikelets solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate, dorsally compressed, plano-convex, acute, $4-4.1 \mathrm{~mm}$ long, $1.1-1.4 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, $4-4.1 \mathrm{~mm}$ long, 1 length of spikelet, membranous, without keels, 7 -veined. Upper glume surface pilose, hairy below. Upper glume margins ciliate. Upper glume hairs tawny, $1-3 \mathrm{~mm}$ long. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret ovate, 4 mm long, 1 length of spikelet, membranous, 5 -veined, pilose, hairy below, acute. Fertile lemma elliptic, $3.1-3.3 \mathrm{~mm}$ long, $1-1.1 \mathrm{~mm}$ wide, cartilaginous, pallid, without keel, 5 -veined, more than 3-veined. Lemma surface glabrous. Lemma margins involute. Palea separating from lemma above, involute, coriaceous.

Flower and Fruit. Lodicules 2. Anthers 3, 2.1-2.2 mm long, yellow. Caryopsis with adherent pericarp, obovoid, dorsally compressed, plano-convex, 1.8 mm long, pallid, emarginate. Hilum elliptic or linear, 0.5 length of caryopsis.

Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil Northeast.
Bahia.

Illustrations (Books): J.A.Steyermark et al, Flora of the Venezuelan Guayana Vol. 8 (2004) (234, Fig. 184), E.Judziewicz, Flora of the Guianas, 187. Poaceae (1990) (493, Fig. 85).

Derivation (Clifford \& Bostock 2007): L. painted. Glumes and/or lemmas with conspicuous pigmented veins or margins.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Annual, caespitose. Culms 25-60 cm long, 1 mm diam. Culminternodes thin-walled, distally glabrous. Culm-nodes glabrous. Leaves without demarcation between sheath and blade. Leaf-sheaths keeled, glabrous on surface. Ligule an eciliate membrane, 1-2.2 mm long, brown. Leaf-blades conduplicate, $10-20 \mathrm{~cm}$ long, $1.5-3 \mathrm{~mm}$ wide. Leaf-blade margins tuberculate-ciliate, hairy at base.

Inflorescence. Inflorescence composed of racemes. Racemes $1-3$, single or paired or borne along a central axis, arcuate, unilateral, $3-7 \mathrm{~cm}$ long. Central inflorescence axis $0.5-3 \mathrm{~cm}$ long. Rhachis wingless, flattened, 0.7 mm wide. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, 0.6 mm long, glabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, gibbous, $1-1.1 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, shorter than spikelet, thinner than fertile lemma. Upper glume ovate, 0.9 length of spikelet, membranous, mid-green or purple, without keels, $0-3$-veined. Upper glume primary vein absent or distinct. Upper glume lateral veins absent or distinct.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 0.9 length of spikelet, membranous, $4-5$-veined, with unevenly spaced veins (near margins). Fertile lemma ovate, gibbous, $1-1.1 \mathrm{~mm}$ long, indurate, pallid, without keel. Lemma surface tuberculate. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3, $0.2-0.3 \mathrm{~mm}$ long, purple. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Mesoamerica, Northern South America, Western South America, Brazil. Bolivia, Colombia. Brazil West Central, Brazil Southeast, Brazil North.

Illustrations (Journals): Ruizia (13:366 Fig 47a-c (1993)), Rodriguesia (63: 949, Fig. 7 (2012)).
Derivation (Clifford \& Bostock 2007): L. pilus, a hair; -osa, abundance. The whole plant or any of its organs invested with long spreading hairs.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms geniculately ascending, 50-130 cm long, $1-3 \mathrm{~mm}$ diam. Culm-internodes thin-walled, distally glabrous to pilose. Culm-nodes glabrous or bearded. Lateral branches sparse. Leaf-sheaths keeled, glabrous on surface or pilose, with tubercle-based hairs, outer margin hairy. Leaf-sheath oral hairs ciliate, $3-6 \mathrm{~mm}$ long. Ligule an eciliate membrane, $0.6-2.5 \mathrm{~mm}$ long, brown. Collar glabrous or bearded. Leaf-blades $10-25 \mathrm{~cm}$ long, $5-10 \mathrm{~mm}$ wide. Leaf-blade midrib conspicuous, keeled beneath. Leaf-blade surface pilose, hairy on both sides, with tubercle-based hairs. Leaf-blade margins ciliate.

Inflorescence. Inflorescence composed of racemes, terminal and axillary. Peduncle glabrous or pubescent above. Racemes 1, single, arcuate, unilateral, 6-12 cm long. Rhachis narrowly winged, folded longitudinally to embrace spikelets, $1-1.5 \mathrm{~mm}$ wide, ciliate on margins. Spikelet packing irregular. Spikelets in pairs. Fertile spikelets pedicelled, 2 in the cluster. Pedicels present, 1 mm long, pubescent.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, plano-convex, 2.63.2 mm long, falling entire.

Glumes. Glumes two, shorter than spikelet, thinner than fertile lemma. Lower glume ovate or oblate, $0.5-2 \mathrm{~mm}$ long, 1 -veined. Lower glume lateral veins absent. Upper glume ovate, $2.4-3 \mathrm{~mm}$ long, $0.8-0.9$ length of spikelet, membranous, without keels, 5 -veined.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, $4-5$-veined, without midvein or with evident midvein. Fertile lemma ovate, $2.5-2.8 \mathrm{~mm}$ long, indurate, pallid, without keel. Lemma surface striate. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1-1.2 mm long, purple. Caryopsis with adherent pericarp.

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Brazil: Goiás: Mun. Babaçulâdia, 18 km SW of Wandelandia along Belém-Brasília highwat (BR-153), 6?6'S, 48?5'W. 420 m , open cerrado with scattered trees on sandy soil, dominant grass Mesosetum sp., 26 Feb 1980, T. Plowman, G. Davidse, N.A. Rosa, C.S. Rosário \& M.R. dos Santos 9173 (HT: MG; IT: MO).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): In honor of Timothy C. Plowman (1944-1989) who collected in Brazil.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Annual, caespitose. Culms erect, 50 cm long. Culm-internodes terete or elliptical in section, $4-20 \mathrm{~cm}$ long, distally glabrous. Culm-nodes glabrous. Lateral branches sparse or ample, arising from mid culm and upper culm. Leaf-sheaths $4-15 \mathrm{~cm}$ long, mostly shorter than adjacent culm internode, keeled, glabrous on surface or pilose, with tubercle-based hairs. Ligule an eciliate membrane, $1-2.5 \mathrm{~mm}$ long, brown. Leaf-blades ascending, flat or involute, $5-20 \mathrm{~cm}$ long, $4-7 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pilose, hairy on both sides, with tubercle-based hairs. Leaf-blade apex acute.

Inflorescence. Inflorescence composed of racemes. Racemes $1(-2)$, single, unilateral, $5-12 \mathrm{~cm}$ long. Rhachis angular, $0.5-1.5 \mathrm{~mm}$ wide, glabrous on surface, scabrous on margins. Spikelet packing irregular, 4 -rowed. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, subequal, scaberulous, bearing a few hairs.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or obovate, dorsally compressed, planoconvex, $3.2-4.4 \mathrm{~mm}$ long, $2-3.2 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, shorter than spikelet, thinner than fertile lemma. Upper glume elliptic or obovate, $2.8-4 \mathrm{~mm}$ long, 0.75 length of spikelet, membranous, without keels, $5(-7)$ -veined.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic or obovate, 1 length of spikelet, membranous, 5(-7) -veined, wrinkled, glabrous. Fertile lemma elliptic,
$3.2-4.2 \mathrm{~mm}$ long, $2-2.8 \mathrm{~mm}$ wide, indurate, light brown, without keel. Lemma surface papillose. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Lodicules 2, cuneate, 0.4 mm long, fleshy. Anthers 3, 2-2.4 mm long. Caryopsis with adherent pericarp, ellipsoid or orbicular, plano-convex, $2-3.2 \mathrm{~mm}$ long, pallid. Embryo 0.5 length of caryopsis. Hilum linear, 0.5 length of caryopsis.

Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil West Central, Brazil Northeast, Brazil North.
Mato Grosso, Goiás. Bahia. Tocantins.

Paspalum polyphyllum Nees ex Trin. Gram. Panic. 114 (1826).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: G.H. von Langsdorff s.n.; Nees mis., 1824, Brasilia: in campis siccis pr.Mariannam (LE; IT: K, SI (photo ex K, US), US-2855764 (fragm. ex LE)).

Derivation (Clifford \& Bostock 2007): Gk. polys, several; phyllon, leaf. Culms many-leaved in comparison with related species.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Cataphylls evident. Rhizomes elongated. Basal innovations extravaginal. Culms erect, $40-65 \mathrm{~cm}$ long. Culm-internodes distally glabrous or pubescent. Culm-nodes glabrous. Lateral branches ample. Leaf-sheaths pilose. Leaf-sheath oral hairs ciliate. Ligule an eciliate membrane, 1 mm long. Leaf-blades lanceolate, $3.5-7 \mathrm{~cm}$ long, $2-8 \mathrm{~mm}$ wide, stiff. Leaf-blade surface pilose, sparsely hairy, with tubercle-based hairs. Leaf-blade apex attenuate.

Inflorescence. Inflorescence composed of racemes. Racemes $1-4$, single or paired or digitate, unilateral, 4-7.5 cm long. Rhachis narrowly winged, flattened, 1.6 mm wide, pubescent on surface. Spikelet packing 2-4 -rowed. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, oblong, puberulous, tip discoid.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, turgidly plano-convex, 3.5 mm long, 1 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume primary vein pubescent (below). Upper glume margins tuberculate, ciliate. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret ovate, 0.9 length of spikelet, membranous, 3 -veined, ciliate on margins, acute. Fertile lemma elliptic, 2.8 mm long, indurate, without keel. Lemma surface puberulous, hairy in the middle. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp, obovoid. Embryo 0.5 length of caryopsis. Hilum elliptic.

Distribution (TDWG). Continent. South America.
Country /Province /State. Western South America, Brazil, Southern South America. Bolivia, Colombia. Brazil West Central, Brazil Northeast, Brazil Southeast, Brazil South. Argentina Northeast, Paraguay, Uruguay.

Paspalum pontanalis Michx. Fl. Bor. Am. i. 45 (1803).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: A. Chase 11080, 28 Feb 1930, Brazil: Mato Grosso (US-1448664).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): Portuguese pontanal, marsh. L. -alis, pertaining to. Growing in swampy places.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Distribution (TDWG). Continent. South America.
Country /Province/State. Brazil. Brazil West Central.
Paspalum praecox Walt. Fl. Carol. 75 (1788).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: type not known,.
Illustrations (Books): M.E.Barkworth et al, Flora of North America north of Mexico Vol 25 Poaceae, part 2 (2003) (598), R.Pilger, Die Naturlichen Pflanzenfamilien 14e (1940) (64, Fig. 36).

Derivation (Clifford \& Bostock 2007): L. early. Flowering early in the spring.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Rhizomes short. Culms $50-100 \mathrm{~cm}$ long. Leaf-sheaths keeled, glabrous on surface or hirsute. Ligule an eciliate membrane, $2-2.5 \mathrm{~mm}$ long. Leaf-blades $15-25 \mathrm{~cm}$ long, 3-7 mm wide. Leaf-blade surface glabrous or hirsute, hairy on both sides.

Inflorescence. Inflorescence composed of racemes. Racemes 3-6, borne along a central axis, unilateral, $2-7 \mathrm{~cm}$ long. Rhachis wingless, flattened. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, $0.2-1 \mathrm{~mm}$ long, puberulous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets orbicular or obovate, dorsally compressed, 2.2-3.2 mm long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume orbicular, 1 length of spikelet, membranous, without keels, 3 -veined.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, $3-5$-veined, with unevenly spaced veins (near margins). Fertile lemma ovate, $2.2-3.2 \mathrm{~mm}$ long, indurate, light brown, without keel. Lemma surface papillose. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. North America.
Country /Province /State. South-central USA, Southeastern USA. Texas. Alabama, Arkansas, Florida, Georgia, Mississippi, North Carolina, South Carolina.

Paspalum procerum S.Denham. Ann. Missouri Bot. Gard. 92(4): 517 (2005).

TYPE from Panama. Basionym or Replaced Name: Thrasya hitchcockii Chase, Journ. Wash. Acad. Sc. xvii. 142. (1927). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: A.S. Hitchcock 8140, 16 Sep 1911, Panama: Prov. Panam? Chorrera, collected at the edge of a copse, on a hill (US-1269446).

Illustrations: None found.

Derivation (Clifford \& Bostock 2007): L. tall. Culms tall.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect or geniculately ascending, 50-100 cm long. Culm-internodes distally glabrous or pilose. Culm-nodes pubescent. Leaf-sheaths keeled, glabrous on surface or hirsute, with tubercle-based hairs, outer margin hairy. Ligule an eciliate membrane, 1 mm long, truncate. Leaf-blades linear or lanceolate, $12-30 \mathrm{~cm}$ long, $4-6 \mathrm{~mm}$ wide. Leaf-blade surface pubescent or pilose, hairy on both sides. Leaf-blade margins ciliate.

Inflorescence. Inflorescence composed of racemes, terminal and axillary. Racemes 1, single, arcuate, unilateral, 9-13 cm long. Rhachis broadly winged, folded longitudinally to embrace spikelets, 2 mm wide, glabrous on surface, glabrous on margins or ciliate on margins (sparsely), terminating in a barren extension, extension flattened. Spikelet packing alternately adaxial and abaxial, regular, 1 -rowed. Spikelets pectinate, in pairs. Fertile spikelets sessile and pedicelled, 2 in the cluster. Pedicels present, fused to internode, united wholly.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, 3.5 mm long, 1.8 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure or two, dissimilar, reaching apex of florets, thinner than fertile lemma. Lower glume oblate, $0.3(-2) \mathrm{mm}$ long, $0.1-0.3$ length of spikelet, hyaline, without keels, 0 -veined. Lower glume lateral veins absent. Lower glume apex acute. Upper glume elliptic, 3.5 mm long, 1 length of spikelet, chartaceous, without keels, 5 -veined. Upper glume surface glabrous or pilose, hairy at apex. Upper glume margins ciliate. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, coriaceous, readily splitting into two halves, glabrous or pubescent, hairy at apex, eciliate on margins, acute. Palea of lower sterile floret becoming indurate on flanks at maturity. Fertile lemma elliptic, 3 mm long, coriaceous, without keel. Lemma surface papillose or striate. Lemma margins involute. Lemma apex acute. Palea coriaceous.

Flower and Fruit. Lodicules 2, fleshy, truncate. Anthers 3.
Distribution (TDWG). Continent. South America.
Country /Province/State. Mesoamerica, Northern South America. Costa Rica, Panama. Venezuela.

## Paspalum procurrens C.L.Quarin. Bol. Soc. Argent. Bot., 29 (1993).

Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Argentina. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: C. Saravia Toledo 2068, 14 Apr 1989, Argentina: Salta: Anta Dept.: 10 km al sur de Joaquín V. González, finca Pozo Largo, suelos arenosos, 340 m (CTES; IT: BAA, K, SI, US-3329123).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. procurro, project. The inflorescence projects beyond the leaf-sheath.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Stolons present. Culms 45-85 cm long, 2-3 mm diam., 23 -noded, rooting from lower nodes. Leaf-sheaths pilose, with tubercle-based hairs, hairs white. Ligule an eciliate membrane, 1 mm long. Leaf-blade base broadly rounded. Leaf-blades $5-20 \mathrm{~cm}$ long, $0.5-2 \mathrm{~mm}$ wide. Leaf-blade surface pilose, sparsely hairy, hairy abaxially. Leaf-blade margins tuberculate-ciliate. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes 13-21, borne along a central axis, unilateral, $0.5-7 \mathrm{~cm}$ long. Central inflorescence axis $7-18 \mathrm{~cm}$ long. Rhachis angular. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, concavo-convex, $2-$ 2.2 mm long, 1 mm wide, falling entire.

Glumes. Glumes both absent or obscure.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 3 -veined, obtuse. Fertile lemma elliptic, 2-2.2 mm long, indurate, without keel, 7 -veined, more than 3 -veined. Lemma lateral veins distinct. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp, ellipsoid, 1.3-1.6 mm long. Embryo 0.5 length of caryopsis.
$2 n=20$ ( 1 ref TROPICOS).
Distribution (TDWG). Continent. South America.
Country /Province /State. Western South America, Southern South America. Bolivia.
Salta.

Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Mexico. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: C.G. Pringle 3343, 9 Nov 1890, Mexico: Michoacán: low lands near Pátzcuaro (US-2855765; IT: BAA (fragm. ex P), MO, NY-414201, NY-414202, P).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. prosterno, throw to the ground. Culms creeping or wiry so as to fall on the ground.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Culms prostrate, $30-75 \mathrm{~cm}$ long, spongy, rooting from lower nodes. Leaf-sheaths pilose. Ligule an eciliate membrane. Leaf-blade base broadly rounded. Leafblades $8-12 \mathrm{~cm}$ long, $10-20 \mathrm{~mm}$ wide. Leaf-blade surface pilose.

Inflorescence. Inflorescence composed of racemes. Racemes $3-15$, borne along a central axis, unilateral, $1-3.7 \mathrm{~cm}$ long. Central inflorescence axis $5-15 \mathrm{~cm}$ long. Rhachis deciduous from axis, broadly winged, foliaceous, folded longitudinally to embrace spikelets, $2.5-3 \mathrm{~mm}$ wide, terminating in a barren extension, extension flattened, extension $3-5 \mathrm{~mm}$ long. Spikelet packing abaxial, regular, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong, dorsally compressed, plano-convex, 2.1-2.2 mm long, falling entire, deciduous with accessory branch structures.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, hyaline, without keels.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, hyaline. Fertile lemma elliptic, 2 mm long, indurate, pallid, shiny, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.

Derivation (Clifford \& Bostock 2007): L. dwarf, low growing. Habit typically depauperate.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, mat forming. Culms $10-40 \mathrm{~cm}$ long, $1-1.5 \mathrm{~mm}$ diam. Culm-internodes thin-walled, distally glabrous. Culm-nodes glabrous. Leaves mostly basal. Leaf-sheaths pubescent. Ligule an eciliate membrane, $0.5-1 \mathrm{~mm}$ long. Leaf-blades $5-10 \mathrm{~cm}$ long, $3-7 \mathrm{~mm}$ wide. Leafblade apex abruptly acute.

Inflorescence. Inflorescence composed of racemes. Racemes 2, paired, unilateral, 2.5-4 cm long. Rhachis narrowly winged. Spikelet packing abaxial, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or ovate, dorsally compressed, obtuse, 1.51.8 mm long, $1.1-1.2 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure or one to two the lower present in some spikelets, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.1-0.2 \mathrm{~mm}$ long, hyaline, 1 veined. Lower glume lateral veins absent. Upper glume ovate, 1 length of spikelet, membranous, without keels, 3 -veined.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 3 -veined, with unevenly spaced veins (near
margins). Fertile lemma ovate, $1.4-1.6 \mathrm{~mm}$ long, indurate, yellow, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers $3,0.7 \mathrm{~mm}$ long, purple. Caryopsis with adherent pericarp.
$2 n=20$ ( 3 refs TROPICOS).
Distribution (TDWG). Continent. South America.
Country /Province/State. Mesoamerica, Caribbean, Northern South America, Western South America, Brazil, Southern South America. Leeward Is, Trinidad-Tobago. French Guiana, Guyana, Surinam, Venezuela. Bolivia, Colombia. Brazil West Central, Brazil Northeast, Brazil Southeast, Brazil North, Brazil South. Argentina Northeast, Chile Central, Paraguay.

Images: D.Sharp \& B.K.Simon, AusGrass. Grasses of Australia. CD-Rom Version 1.0. (2002);-
Derivation (Clifford \& Bostock 2007): L. in four parts. In two rows of pairs.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rhizomes absent or short. Culms 90-180 cm long, 4 -noded. Leaf-sheaths keeled, glabrous on surface. Ligule an eciliate membrane, $1-2 \mathrm{~mm}$ long, obtuse. Leaf-blades $15-40 \mathrm{~cm}$ long, $5-8 \mathrm{~mm}$ wide. Leaf-blade surface glabrous.

Inflorescence. Inflorescence composed of racemes. Racemes 15-25, borne along a central axis, ascending, unilateral, 6-8 cm long. Central inflorescence axis 12-25 cm long. Rhachis narrowly winged, with sharp-edged midrib, with scattered hairs or glabrous on surface, scabrous on margins. Spikelet packing irregular, 4 -rowed. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, oblong, 1 mm long, bearing a few hairs or glabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, plano-convex, obtuse, $2.1-2.6 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, 1 length of spikelet, chartaceous, red, without keels, 3 -veined. Upper glume surface pubescent, with tubercle-based hairs. Upper glume hairs white. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, chartaceous, 3 -veined, glabrous, obtuse. Fertile lemma elliptic, gibbous, 2.1-2.6 mm long, indurate, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3.

TYPE from Paraguay. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Rosengurtt B-5746, 14 Mar 1950, Paraguay. Paraguari: Barrerito, Caapuc?(US; IT: BAA, K, MA, P, SI).

Illustrations (Books): F.O.Zuloaga, Z.E.Rugolo \& A.M. Anton, Flora Argentina 3 - 1, Aristidoideae a Pharoideae (2012) (431).

Derivation (Clifford \& Bostock 2007): In honor of Camilo Luis Quarin (1943-) Argentinian agrostologist.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, herbaceous, or if woody then not a bamboo, caespitose. Rhizomes short, scaly. Culms 100-200 cm long, 3-5 mm diam. Culm-internodes $15-30 \mathrm{~cm}$ long, distally
glabrous. Culm-nodes pubescent. Lateral branches lacking. Leaf-sheaths $15-35 \mathrm{~cm}$ long, keeled, glabrous on surface or pilose, outer margin glabrous. Ligule an eciliate membrane, $2.4-4 \mathrm{~mm}$ long, brown, truncate. Collar glabrous or pubescent. Leaf-blade base with a false petiole (basal leaves), petiole $0.5-1 \mathrm{~cm}$ long. Leaf-blades $30-60 \mathrm{~cm}$ long, $10-18 \mathrm{~mm}$ wide, stiff. Leaf-blade surface glabrous or pubescent, hairy adaxially. Leaf-blade margins scabrous. Leaf-blade apex acute.

Inflorescence. Inflorescence composed of racemes. Peduncle $50-70 \mathrm{~cm}$ long, glabrous. Racemes few or numerous, $25-35$, borne along a central axis, unilateral, $5-12.5 \mathrm{~cm}$ long. Central inflorescence axis 1428 cm long, glabrous. Rhachis narrowly winged, $0.4-0.6 \mathrm{~mm}$ wide, ciliate on margins. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, 1.2 mm long, scabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, subacute, $1.6-2.4 \mathrm{~mm}$ long, $0.8-1 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, shorter than spikelet, thinner than fertile lemma. Upper glume elliptic, 0.75 length of spikelet, membranous, without keels, 3 -veined. Upper glume surface pubescent. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 3 -veined, pubescent, obtuse. Fertile lemma elliptic, gibbous, 1.6-2.2 mm long, $0.8-1 \mathrm{~mm}$ wide, indurate, yellow, without keel, 5 -veined, more than 3 -veined. Lemma surface papillose. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Lodicules 2, 0.3 mm long. Anthers 3, 1-1.6 mm long. Caryopsis with adherent pericarp.

Distribution (TDWG). Continent. South America.
Country /Province/State. Brazil, Southern South America. Brazil South. Paraguay.
Rio Grande do Sul, Santa Catarina. Chaco, Corrientes, Misiones.

Illustrations: None found.

Derivation (Clifford \& Bostock 2007): L. -ense, indicating location. From Fazenda Capco Redondo, Parana, Brazil.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Rhizomes short. Butt sheaths pubescent. Culms erect, 5560 cm long. Culm-internodes distally glabrous. Leaf-sheaths mostly shorter than adjacent culm internode, outer margin glabrous or hairy. Ligule an eciliate membrane. Leaf-blades erect, 6-10 cm long, 1.5-2.5 mm wide. Leaf-blade surface hirsute, sparsely hairy, with tubercle-based hairs.

Inflorescence. Inflorescence composed of racemes. Racemes 4-6, borne along a central axis, unilateral, $3-7 \mathrm{~cm}$ long. Central inflorescence axis $4-7 \mathrm{~cm}$ long. Rhachis broadly winged, 2 mm wide. Spikelet packing abaxial, 4 -rowed. Raceme-bases pilose or hirsute. Spikelets solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, 2-8 mm long, 1.4 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 3-5 -veined. Upper glume surface glabrous. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 3-5 -veined, glabrous, acute. Fertile lemma elliptic, 2.8 mm long, indurate, pallid, shiny, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province/State. Brazil. Brazil South.
Paraná.

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. bent backwards. Racemes of inflorescence recurved.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Butt sheaths pubescent. Culms erect, $60-90 \mathrm{~cm}$ long. Leaves without demarcation between sheath and blade. Leaf-sheaths pilose. Ligule an eciliate membrane, $3-5 \mathrm{~mm}$ long, acute. Leaf-blades linear or lanceolate, $7-14 \mathrm{~cm}$ long, $4-6 \mathrm{~mm}$ wide. Leaf-blade surface pilose, densely hairy, hairy on both sides.

Inflorescence. Inflorescence composed of racemes. Racemes 6-10, borne along a central axis, straight or arcuate, unilateral, $1-3.5 \mathrm{~cm}$ long. Rhachis broadly winged, foliaceous, folded longitudinally to embrace spikelets, $1.5-2.5 \mathrm{~mm}$ wide. Spikelet packing crowded, 4 -rowed. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, oblong, ciliate.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong or obovate, dorsally compressed, planoconvex, $1.3-1.7 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes both absent or obscure.
Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 3 -veined, acute. Fertile lemma oblong or obovate, $2-3 \mathrm{~mm}$ long, indurate, without keel, 5 -veined, more than 3-veined. Lemma lateral veins obscure. Lemma surface papillose. Lemma margins involute. Palea involute, indurate. Palea keels tuberculate. Palea surface smooth.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil West Central, Brazil Northeast, Brazil Southeast, Brazil South.

Goias, Minas Gerais, Rio de Janeiro, Espirito Santo. Mato Grosso do Sul. Bahia. Minas Gerais, Rio de Janeiro, Sao Paulo. Paraná, Rio Grande do Sul, Santa Catarina.

TYPE from Galapagos. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: John Thomas Howell 9902, 9 Jun 1932, Galapagos Islands: north side of Indefatigable Island (CAS-211116: IT: MO-1199288, US-1611605).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. redundo, be abundant. Locally abundant.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose, clumped densely. Culms erect or geniculately ascending, $70-90 \mathrm{~cm}$ long. Culm-internodes elliptical in section. Lateral branches lacking. Leaf-sheaths glabrous on surface or pilose. Ligule an eciliate membrane, 2 mm long. Leaf-blades 5-20 cm long, 3-7 mm wide, dark green. Leaf-blade midrib prominent beneath. Leaf-blade surface pilose, hairy on both sides, with tubercle-based hairs.

Inflorescence. Inflorescence composed of racemes. Racemes 2-4, borne along a central axis, erect or ascending, flexuous, unilateral, $2.5-6 \mathrm{~cm}$ long. Rhachis wingless, angular, $1-1.3 \mathrm{~mm}$ wide, scabrous on margins. Raceme-bases pilose. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, flattened, scabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, turgidly planoconvex, obtuse, $4-5 \mathrm{~mm}$ long, $2.5-2.8 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume obovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface glabrous. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, obovate, 1 length of spikelet, membranous, 5 -veined, obtuse. Fertile lemma obovate, 4 mm long, $2.3-2.5 \mathrm{~mm}$ wide, indurate, grey or light brown, shiny, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Cleistogenes present, in lower sheaths.
Distribution (TDWG). Continent. South America.
Country /Province /State. Western South America. Ecuador.

Derivation (Clifford \& Bostock 2007): in honor of Anders Frederick Regnell (1807-1884) Swedish physician and botanist.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rhizomes short. Basal innovations extravaginal or intravaginal. Culms robust, 100-150 cm long, 3-5 -noded. Culm-nodes glabrous or pubescent. Lateral
branches lacking. Leaf-sheaths longer than adjacent culm internode, keeled, puberulous, with tuberclebased hairs. Ligule a ciliolate membrane. Leaf-blades $20-40 \mathrm{~cm}$ long, $10-20 \mathrm{~mm}$ wide. Leaf-blade surface pilose, hairy adaxially, with tubercle-based hairs. Leaf-blade margins scabrous. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes 6-20, borne along a central axis, unilateral, 6-10 cm long. Rhachis wingless, angular. Spikelet packing 4 -rowed. Raceme-bases hirsute. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, obtuse, $2-2.5 \mathrm{~mm}$ long, $1.5-1.8 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, shorter than spikelet, thinner than fertile lemma. Upper glume elliptic, 0.9 length of spikelet, membranous, dark brown, without keels, 3 -veined. Upper glume lateral veins obscure. Upper glume surface pubescent. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, light brown or purple, 5 -veined, puberulous, obtuse. Fertile lemma elliptic, $2-2.5 \mathrm{~mm}$ long, indurate, light brown, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.

Illustrations (Journals): Ruizia (13:352, Fig 44h-k (1993)).
Derivation (Clifford \& Bostock 2007): L. repo, crawl. Rhizome well developed.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Culms decumbent or prostrate, 50-200 cm long, spongy, rooting from lower nodes. Culm-nodes brown. Leaf-sheaths inflated. Leaf-sheath auricles erect. Ligule an eciliate membrane, $2-3 \mathrm{~mm}$ long, erose. Leaf-blades lanceolate, parallel-sided, $10-20 \mathrm{~cm}$ long, $12-15 \mathrm{~mm}$ wide. Leaf-blade surface scaberulous. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes numerous, borne along a central axis, closely spaced, spreading or ascending, unilateral, $2.5-10 \mathrm{~cm}$ long. Central inflorescence axis $3-30 \mathrm{~cm}$ long. Rhachis deciduous from axis, broadly winged, foliaceous, with rounded midrib, $1-1.5 \mathrm{~mm}$ wide, terminating in a barren extension, extension flattened. Spikelet packing abaxial, regular, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, compressed strongly, plano-convex, acute, $1.4-2.3 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, hyaline, without keels, 2 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, hyaline, 2 -veined, acute. Fertile lemma elliptic, $1-1.5 \mathrm{~mm}$ long, coriaceous, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, coriaceous.

Illustrations (Books): A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (225, Fig. 175).
Derivation (Clifford \& Bostock 2007): L. repto, creep. Culms procumbent and root at the nodes.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Butt sheaths pubescent. Culms decumbent, 30-100 cm long, rooting from lower nodes. Culm-nodes glabrous or pubescent. Lateral branches ample. Leaf-sheaths loose, glabrous on surface. Ligule an eciliate membrane, 0.2 mm long. Leaf-blades $3-10 \mathrm{~cm}$ long, 2-5 mm wide. Leaf-blade surface glabrous to pubescent.

Inflorescence. Inflorescence composed of racemes. Racemes 2-3, paired or digitate, spreading or deflexed, unilateral, $1-4 \mathrm{~cm}$ long. Central inflorescence axis $0.5-2 \mathrm{~cm}$ long. Rhachis wingless, angular. Spikelet packing abaxial. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, obtuse, $1.6-1.7 \mathrm{~mm}$ long, 1.2 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, yellow, without keels, 2-3 -veined. Upper glume primary vein absent or distinct. Upper glume surface pubescent. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, yellow, 2-3 -veined, without midvein or with evident midvein, pubescent, obtuse. Fertile lemma elliptic, $1.4-1.5 \mathrm{~mm}$ long, indurate, dark brown, shiny, without keel. Lemma margins involute. Lemma apex obtuse, pubescent. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Cleistogenes present, in lower sheaths.
Distribution (TDWG). Continent. South America.
Country /Province /State. Caribbean. Cuba, Jamaica.
Paspalum restingense S.A. Renvoize. Kew Bull., 39(1): 179 (1984).

Derivation (Clifford \& Bostock 2007): L. ripa, river bank; -aria, pertaining to. Growing on river banks.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Annual, caespitose. Culms 25-45 cm long. Ligule an eciliate membrane, 1 mm long. Leaf-blades $10-20 \mathrm{~cm}$ long, $2.5-7 \mathrm{~mm}$ wide. Leaf-blade surface glabrous, hairless throughout or except near base.

Inflorescence. Inflorescence composed of racemes. Racemes 2-4, digitate, unilateral, 2-3 cm long. Rhachis $0.7-1 \mathrm{~mm}$ wide. Spikelet packing 2 -rowed. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets orbicular, dorsally compressed, plano-convex, 1.61.8 mm long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume orbicular, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret orbicular, 1 length of spikelet, membranous, grey, 3 -veined, wrinkled, obtuse. Fertile lemma orbicular, $1.6-1.8 \mathrm{~mm}$ long, indurate, dark brown, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Northern South America, Western South America, Brazil. French Guiana, Guyana, Surinam, Venezuela. Colombia. Brazil West Central, Brazil Northeast, Brazil North.

Mato Grosso, Goiás. Ceará, Maranhão, Piaui. Acre, Amapa, Amazonas, Pará, Roraima, Rondonia, Tocantins.

TYPE from Cuba. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: IT: Bro. León \& M. Roca 8233, 10 Aug 1918, Cuba: Las Villas: Sabana de Motembo (NY-71054, US-1060722).

Illustrations (Books): A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (217, Fig. 158).
Derivation (Clifford \& Bostock 2007): L. -anum, indicating connection. In honor of Modesta Roca, Cuban cleric and friend of Brother Lion who collected in West Indies.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, slender, 40-75 cm long. Culmnodes glabrous or pubescent. Lateral branches lacking. Leaf-sheaths as wide as blade at the collar, keeled, glabrous on surface, outer margin hairy. Ligule an eciliate membrane, $2-2.5 \mathrm{~mm}$ long. Leaf-blades conduplicate, $10-30 \mathrm{~cm}$ long, $3-7 \mathrm{~mm}$ wide. Leaf-blade surface glabrous. Leaf-blade margins glabrous or tuberculate-ciliate, hairy at base.

Inflorescence. Inflorescence composed of racemes. Racemes 2-4, paired or borne along a central axis, arcuate, unilateral, $2.5-9 \mathrm{~cm}$ long. Central inflorescence axis $1-6 \mathrm{~cm}$ long. Rhachis wingless, angular, $1.2-$ 1.5 mm wide, scaberulous on margins. Spikelet packing crowded. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, acute, $2.1-2.5 \mathrm{~mm}$ long, $1.3-1.5 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume surface papillose. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 3 -veined, concave across back, papillose, acute. Fertile lemma elliptic, $2-2.2 \mathrm{~mm}$ long, indurate, without keel. Lemma surface papillose. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province/State. Caribbean. Cuba.

Ramos \& P.D. Alves 16 HT: UB; IT: BAA, CEN, MO

Illustrations: None found.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Annual, caespitose. Cataphylls evident. Rhizomes short. Culms erect, $60-82 \mathrm{~cm}$ long, 2 mm diam. Culm-internodes distally glabrous. Culm-nodes glabrous. Lateral branches ample, arising from upper culm. Leaf-sheaths longer than adjacent culm internode, glabrous on surface. Leaf-sheath auricles erect. Ligule an eciliate membrane, 0.3 mm long, pilose on abaxial surface, erose, obtuse. Leaf-blades spreading, flat or conduplicate, $2.5-8.5 \mathrm{~cm}$ long, $0.5-1(-2) \mathrm{mm}$ wide. Leaf-blade surface glabrous. Leaf-blade margins scaberulous. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes, terminal and axillary. Peduncle $3-9 \mathrm{~cm}$ long, glabrous. Racemes 1, single, unilateral, $1.5-4 \mathrm{~cm}$ long. Rhachis broadly winged, membranous, folded longitudinally to embrace spikelets, $3-4 \mathrm{~mm}$ wide, dark-coloured (green \& purple), glabrous on surface, glabrous on margins, terminating in a barren extension, extension flattened. Spikelet packing crowded, 2 rowed. Spikelets solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets lanceolate or elliptic, dorsally compressed, 3-3.2 mm long, $0.8-1 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, $3-3.2 \mathrm{~mm}$ long, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume surface pilose, hairy at base. Upper glume margins ciliate. Upper glume hairs 2 mm long. Upper glume apex with a unilateral tooth, attenuate, mucronate or awned, 1 -awned, awn $1-1.8 \mathrm{~mm}$ long.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 2.8 mm long, 1 length of spikelet, membranous, 3 -veined, pubescent, hairy at base, ciliate on margins, fringed above, mucronate or awned. Awn of lower sterile floret $0.8-1.4 \mathrm{~mm}$ long. Fertile lemma elliptic, $2-2.1 \mathrm{~mm}$ long, $0.5-0.6 \mathrm{~mm}$ wide, membranous, pallid, without keel. Lemma margins convolute, covering most of palea. Lemma apex rostrate, pubescent. Palea involute, membranous.

Flower and Fruit. Anthers 3, 2 mm long, orange. Caryopsis with adherent pericarp, oblong, 0.9-1.1 mm long. Hilum elliptic. Disseminule comprising a spikelet. Secondary disseminule a floret.

Distribution (TDWG). Continent. South America.

Derivation (Clifford \& Bostock 2007): in honor of Leon Joseph Sylvestre Sauget-Barbier (1871-1955) French-born cleric and Cuban botanist.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms geniculately ascending or decumbent, slender, tortuous, $15-40 \mathrm{~cm}$ long, wiry. Culm-nodes pubescent. Lateral branches lacking or sparse. Leaves mostly basal. Leaf-sheaths glabrous on surface or pilose, outer margin hairy. Ligule an eciliate membrane. Leaf-blades tortuous, flat or conduplicate, 3-15 cm long, $3-7 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pilose, sparsely hairy.

Inflorescence. Inflorescence composed of racemes. Racemes 1(-2), single or paired, straight or arcuate, unilateral, $2-4 \mathrm{~cm}$ long. Rhachis wingless, angular, 1 mm wide, glabrous on surface or puberulous on surface. Spikelets solitary or in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, obtuse, $1.3-1.6 \mathrm{~mm}$ long, $1-1.1 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume surface pubescent. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 3 -veined, glabrous or pubescent, obtuse. Fertile lemma elliptic, $1.3-1.6 \mathrm{~mm}$ long, indurate, pallid, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. North America, South America.
Country /Province /State. Southeastern USA. Florida. Caribbean. Bahamas, Cuba, Dominican Republic, Haiti, Jamaica, Puerto Rico.

Paspalum saurae (L. Parodi) L. Parodi. Darwiniana, xv. 106 (1969).
TYPE from Uruguay. Basionym or Replaced Name: Paspalum notatum var. saurae Parodi, Revista Argent. Agron. 15: 55, f. 1B (1948). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: L.R. Parodi 12670, Jan 1937, Argentina: Entre Ríos, Concepcion del Uruguay (BAA; IT: US-1721333).

Illustrations (Books): A.Burkat, Flora Ilustrada de Entre Rios (Argentina), Pt II, Gramineas (1969) (383, Fig. 159).

Derivation (Clifford \& Bostock 2007): in honor of Fulgencio Saura (fl. 1948) Argentinian cytologist.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Rhizomes short. Basal innovations intravaginal. Culms $25-50 \mathrm{~cm}$ long, 2-4 -noded. Ligule an eciliate membrane. Leaf-blades flat or involute, $5-20 \mathrm{~cm}$ long, $1-3$ mm wide.

Inflorescence. Inflorescence composed of racemes. Racemes (2-)4-5, digitate, unilateral, 5-10 cm long. Rhachis angular. Spikelet packing abaxial, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, oblong.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or ovate, dorsally compressed, plano-convex, obtuse, 2.8-3.2 mm long, 1.8-2 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 3 -veined, obtuse. Fertile lemma elliptic, 2.8-3.2 mm long, indurate, pallid, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
$2 n=20$ ( 1 ref TROPICOS).
Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil, Southern South America. Argentina Northeast.
Distrito Federal (*). Buenos Aires, Entre Rios.

## Paspalum scandens Tutin. J. Bot. 72: 338 (1934).

Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online (as Thrasya), W.D.Clayton \& K.Harman, GrassBase (2008) and online (as Thrasya).

Basionym or Replaced Name: Thrasya scandens (Tutin) Soderstr. ex A.G. Burman, Brittonia, 32(2): 220 (1980).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. scando, climb up. Of scrambling habit.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Culms erect, 60-90 cm long. Ligule an eciliate membrane. Leaf-blades $8-18 \mathrm{~cm}$ long, $4-6 \mathrm{~mm}$ wide. Leaf-blade surface pilose.

Inflorescence. Inflorescence composed of racemes. Racemes $1(-2)$, single or paired, unilateral, 4-11 cm long. Rhachis broadly winged, folded longitudinally to embrace spikelets, 1 mm wide, scabrous on
margins. Spikelet packing alternately adaxial and abaxial, regular, 1 -rowed. Spikelets pectinate, in pairs. Fertile spikelets sessile and pedicelled, 2 in the cluster. Pedicels present, fused to internode, united wholly.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, obtuse, $1.6-1.8 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes dissimilar, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, 0.3 mm long, $0.15-0.2$ length of spikelet, hyaline, without keels, 0 -veined. Lower glume lateral veins absent. Lower glume apex obtuse. Upper glume ovate, 0.66 length of spikelet, membranous, without keels, 1 veined. Upper glume lateral veins absent. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret oblong, 1 length of spikelet, hyaline, 5 -veined, obtuse. Fertile lemma ovate, 1.5 mm long, coriaceous, pallid, without keel. Lemma surface papillose. Lemma margins involute. Lemma apex obtuse. Palea coriaceous.

Distribution (TDWG). Continent. South America.
Country /Province/State. Northern South America. French Guiana, Guyana, Surinam.

TYPE from Colombia. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: R.E. Schultes, I. Cabrera 19934, Jun 1953, Colombia: Vaupes: Río Paran?(tributary of Río Vaupés). Alt. 700 ft ; 1?0'N, 70?0'W (US-2150293; IT: MO-5114651). OS.

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): in honor of Richard Evans Schultes (1915-) who collected in Colombia.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose, clumped densely. Culms erect, 16-35 cm long. Culm-internodes distally glabrous. Leaf-sheaths pilose. Ligule an eciliate membrane, 0.5 mm long. Leafblades involute, $10-25 \mathrm{~cm}$ long. Leaf-blade surface scabrous, pubescent, hairy adaxially.

Inflorescence. Inflorescence composed of racemes. Racemes 2, paired, appressed or ascending, unilateral, $1.5-3 \mathrm{~cm}$ long. Rhachis wingless, angular. Spikelet packing abaxial. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, 1 mm long, ciliate.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, acute, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, 1 length of spikelet, membranous, without keels. Upper glume primary vein absent. Upper glume lateral veins obscure.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, without midvein, obscurely veined. Fertile lemma obovate, indurate, dark brown, shiny, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Western South America. Colombia.

Paspalum schumannii (Pilger) S.Denham. Ann. Missouri Bot. Gard. 92(4): 518 (2005).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online (as Thrasya), W.D.Clayton \& K.Harman, GrassBase (2008) and online (as Thrasya).

Basionym or Replaced Name: Panicum schumannii Pilg., Bot. Jahrb. Syst. 30(1): 134 (1901).
Recent Synonyms: Thrasya schumannii (Pilger) Pilger, Engl. \& Prantl, Nat. Pflanzenfam. Aufl. 2, xiv e. 69 (1940).

Illustrations (Books): R.Pilger, Die Naturlichen Pflanzenfamilien 14e (1940) (68, Fig. 39 as Thrasya).
Derivation (Clifford \& Bostock 2007): In honor of Karl Schumann (1851-1904) German botanist.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect or geniculately ascending, 70-80 cm long. Culm-nodes bearded. Leaf-sheaths keeled, pilose, with tubercle-based hairs, outer margin hairy. Ligule an eciliate membrane, 2 mm long. Leaf-blades $5-14 \mathrm{~cm}$ long, $3-4 \mathrm{~mm}$ wide. Leaf-blade surface pilose, with tubercle-based hairs. Leaf-blade margins tuberculate-ciliate. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes 1, single, arcuate, unilateral, 6-10 cm long. Rhachis broadly winged, 6 mm wide, glabrous on surface, tuberculate on margins, ciliate on margins, terminating in a barren extension, extension flattened. Rhachis hairs yellow. Spikelet packing alternately adaxial and abaxial, regular, 1 -rowed. Spikelets pectinate, in pairs. Fertile spikelets sessile and pedicelled, 2 in the cluster. Pedicels present, fused to internode, united wholly.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, acute, 3 mm long, 0.9 mm wide, falling entire.

Glumes. Glumes dissimilar, shorter than spikelet, thinner than fertile lemma. Lower glume oblate, 0.2 mm long, 0.1 length of spikelet, hyaline, without keels, 0 -veined. Lower glume lateral veins absent. Lower glume apex truncate. Upper glume elliptic, 0.25-0.33 length of spikelet, membranous, without keels, 0 veined. Upper glume primary vein absent. Upper glume lateral veins absent. Upper glume apex emarginate.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret elliptic or oblong, 1 length of spikelet, coriaceous, sulcate or readily splitting into two halves, smooth or scaberulous, rough
above, acute. Palea of lower sterile floret membranous. Fertile lemma elliptic, 2.7 mm long, coriaceous, without keel. Lemma surface papillose or striate. Lemma margins involute. Lemma apex acute, pubescent. Palea coriaceous.

Flower and Fruit. Lodicules 2, fleshy, truncate. Anthers 3.
Distribution (TDWG). Continent. South America.
Country /Province/State. Brazil. Brazil West Central.
Mato Grosso.

(Pl. 24).
Derivation (Clifford \& Bostock 2007): L. scrobis, ditch; -ulus, diminutive; -atus, possessing. Glumes or lemmas furrowed.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.

Habit, Vegetative Morphology. Perennial, mat forming or caespitose. Culms erect or geniculately ascending, $10-150 \mathrm{~cm}$ long, $1-6 \mathrm{~mm}$ diam., 2-17 -noded, without nodal roots or rooting from lower nodes. Leaf-sheaths mostly shorter than adjacent culm internode. Ligule an eciliate membrane. Leaf-blade base simple. Leaf-blades 5-40 cm long, 3-15 mm wide. Leaf-blade apex attenuate, filiform.

Inflorescence. Inflorescence composed of racemes. Racemes 1-20, digitate or borne along a central axis, unilateral, $2-15 \mathrm{~cm}$ long. Central inflorescence axis $0-8 \mathrm{~cm}$ long. Rhachis broadly winged, with sharp-edged midrib, $1-2.5 \mathrm{~mm}$ wide. Spikelet packing abaxial, regular, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, oblong.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate or orbicular, dorsally compressed, planoconvex, obtuse, $1.4-3 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, chartaceous, dark brown, without keels, 5-7 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, chartaceous, 3-5 -veined, obtuse. Fertile lemma elliptic or orbicular, gibbous, indurate, dark brown, dull, without keel, 5 -veined, more than 3-veined. Lemma surface striate. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. $n=20$ ( 4 refs TROPICOS), or 21 ( 1 ref TROPICOS), or 30 ( 1 ref TROPICOS). $2 n$ $=40$ (1 ref TROPICOS).

Distribution (TDWG). Continent. Africa, Temperate Asia, Tropical Asia, Australasia, Pacific, North America, South America.

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. semi, half; nuda, bare. Only part of the plant bearing hairs.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths pubescent. Culms erect or geniculately ascending, 100 cm long. Culm-internodes distally pubescent. Culm-nodes bearded. Leafsheaths keeled, hirsute. Leaf-sheath oral hairs bearded. Ligule an eciliate membrane, $5-6 \mathrm{~mm}$ long, acute. Leaf-blades $12-30 \mathrm{~cm}$ long, $4-7 \mathrm{~mm}$ wide. Leaf-blade surface puberulous, hairy adaxially. Leaf-blade margins glabrous. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes, terminal and axillary. Racemes 1, single, arcuate, unilateral, $14-30 \mathrm{~cm}$ long. Rhachis broadly winged, folded longitudinally to embrace spikelets, $3-4 \mathrm{~mm}$ wide, glabrous on surface, pubescent on margins, terminating in a barren extension, extension flattened. Rhachis hairs white, $3-4 \mathrm{~mm}$ long. Spikelet packing alternately adaxial and abaxial, regular, 1 -rowed. Spikelets pectinate, in pairs. Fertile spikelets sessile and pedicelled, 2 in the cluster. Pedicels present, fused to internode, united wholly.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, $3.5-4 \mathrm{~mm}$ long, 1.2 mm wide, falling entire.

Glumes. Glumes dissimilar, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, 0.5 mm long, $0.1-0.2$ length of spikelet, hyaline, without keels, 0 -veined. Lower glume lateral veins absent. Lower glume apex acute. Upper glume elliptic, 1 length of adjacent fertile lemma, 0.9 length of spikelet, chartaceous, without keels, 5 -veined. Upper glume surface pilose, hairy at base. Upper glume margins ciliate. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret elliptic or oblong, 0.9 length of spikelet, coriaceous, sulcate or readily splitting into two halves, with basal tufts of hair, 1 hair tufts in all, eciliate on midvein or pubescent on midvein, ciliate on margins (above), acute. Palea of lower sterile floret becoming indurate on flanks at maturity. Fertile lemma elliptic, 2.8 mm long, coriaceous,
without keel. Lemma surface papillose or striate. Lemma margins involute, ciliate, hairy above. Lemma apex acute, pubescent. Palea coriaceous.

Flower and Fruit. Lodicules 2, fleshy, truncate. Anthers 3.
Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil West Central, Brazil North.
Mato Grosso. Rondonia.

Paspalum serpentinum Hochst. ex Steud. Syn. Pl. Gram. 22 (1854).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Surinam. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: A. Kappler 1561, Feb-Apr 1844, Surinam: in districtu Surinamensi Para, in campis (P; IT: CN, G, MO2102097, P, US-80018 (fragm.), W).

Illustrations (Books): A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (205, Fig. 137), W.Burger, Flora Costaricensis 15, Gramineae: Fieldiana Botany New Series 4 (1980) (449, Fig 169).

Derivation (Clifford \& Bostock 2007): L. serpens, snake; -ina, indicating resemblance. Lemmas transversed with dark lines.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, $60-100 \mathrm{~cm}$ long, 1.5 mm diam. Culm-internodes solid, distally glabrous. Culm-nodes constricted, glabrous. Lateral branches lacking. Leaves mostly basal. Leaf-sheaths pilose, with tubercle-based hairs. Ligule an eciliate membrane, 0.3-0.6 mm long. Leaf-blades flat or involute, $15-30 \mathrm{~cm}$ long, $3-4 \mathrm{~mm}$ wide.

Inflorescence. Inflorescence composed of racemes. Peduncle pilose above. Racemes 2, paired, unilateral, $3-7 \mathrm{~cm}$ long. Rhachis wingless, $0.5-0.7 \mathrm{~mm}$ wide. Spikelet packing abaxial, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $0.5-1 \mathrm{~mm}$ long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets orbicular, dorsally compressed, obtuse, $2.5-2.8 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume orbicular, 1 length of spikelet, membranous, light brown or dark brown (mottled), without keels, 3 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, orbicular, 1 length of spikelet, membranous, 3 -veined, with unevenly spaced veins (near margins), obtuse. Fertile lemma elliptic, $2.5-2.8 \mathrm{~mm}$ long, indurate, pallid, without keel. Lemma surface striate. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1.5 mm long, purple. Caryopsis with adherent pericarp, ellipsoid, 1.9 mm long.

Steyermark 58502, 8 Sep 1944, Venezuela: Amazonas: collected in vicinity of Sanariapo, near Río Sanariapo, tributary of Orinoco river (US-1911654; IT: F).

Recent Synonyms: Paspalum setosum (Swallen) S.Denham, Ann. Missouri Bot. Gard.92(4): 518 (2005).

Illustrations: None found.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms geniculately ascending or decumbent, $40-70 \mathrm{~cm}$ long. Culm-nodes bearded. Leaf-sheaths keeled, pilose, with simple hairs or tubercle-based hairs. Leaf-sheath oral hairs ciliate. Ligule an eciliate membrane, 1.5 mm long, erose. Leaf-blades $10-30 \mathrm{~cm}$ long, $2-3 \mathrm{~mm}$ wide. Leaf-blade surface pubescent or pilose, hairy on both sides, with tubercle-based hairs. Leafblade margins tuberculate-ciliate. Leaf-blade apex attenuate.

Inflorescence. Inflorescence composed of racemes, terminal and axillary. Racemes 1, single, arcuate, unilateral, $3-12 \mathrm{~cm}$ long. Rhachis narrowly winged, folded longitudinally to embrace spikelets, 2 mm wide, glabrous on surface, tuberculate on margins, ciliate on margins, terminating in a barren extension, extension flattened. Spikelet packing alternately adaxial and abaxial, regular, 1 -rowed. Spikelets pectinate, in pairs. Fertile spikelets sessile and pedicelled, 2 in the cluster. Pedicels present, fused to internode, united wholly.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or oblong, dorsally compressed, 4 mm long, 1 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume lanceolate, 1.1 length of adjacent fertile lemma, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume margins ciliate. Upper glume apex acute.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret lanceolate, 0.9 length of spikelet, coriaceous, sulcate or readily splitting into two halves, with basal tufts of hair, 1 hair tufts in all, ciliate on margins (above), bearing yellow hairs, acute. Palea of lower sterile floret becoming indurate on flanks at maturity. Fertile lemma elliptic, 2.4 mm long, coriaceous, without keel. Lemma surface papillose or striate, with conspicuous apical hairs. Lemma margins involute. Lemma hairs 0.7 mm long. Lemma apex acute. Palea coriaceous.

Flower and Fruit. Lodicules 2, fleshy, truncate. Anthers 3.
Distribution (TDWG). Continent. South America.
Country /Province/State. Northern South America. Venezuela.

TYPE from Peru. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: J. Soukup 5282, 8 Aug 1964, Peru: Loja: Quebrada Verrugas, S. Bartolom? 2000 mt (US-2528419).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): In honor of Jaroslev Soukup (1903-1989) Czech missionary and ethno-botanist who collected in Peru.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Annual, caespitose. Culms erect, 30-50 cm long. Culm-internodes 513 cm long, yellow, striate, distally glabrous. Culm-nodes brown, pubescent. Lateral branches lacking. Leaf-sheaths $4-10 \mathrm{~cm}$ long, mostly shorter than adjacent culm internode, pilose, outer margin hairy. Ligule a ciliolate membrane, $1-1.5 \mathrm{~mm}$ long. Collar pubescent. Leaf-blades linear or lanceolate, $3-9 \mathrm{~cm}$ long, 3-6 mm wide. Leaf-blade surface pilose, hairy on both sides. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes, exserted or embraced at base by subtending leaf. Peduncle $10-17 \mathrm{~cm}$ long, glabrous. Racemes 8-23, borne along a central axis, ascending, unilateral, 1-3.3 cm long. Central inflorescence axis $4-8 \mathrm{~cm}$ long, glabrous or puberulous. Rhachis deciduous from axis, broadly winged, membranous, $1.8-2.5 \mathrm{~mm}$ wide, puberulous on surface, scaberulous on margins, terminating in a barren extension, extension flattened. Spikelet packing abaxial, 1 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $0.3-0.5 \mathrm{~mm}$ long.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets elliptic or ovate, dorsally compressed, acute, $2-2.7 \mathrm{~mm}$ long, $0.7-$ 0.9 mm wide, falling entire.

Glumes. Glumes both absent or obscure.
Florets. Fertile lemma elliptic or ovate, $2-2.7 \mathrm{~mm}$ long, indurate, pallid or purple, without keel. Lemma surface papillose. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1.4-1.7 mm long. Caryopsis with adherent pericarp, ellipsoid, 1.7 mm long, dark brown. Embryo 0.33 length of caryopsis. Hilum elliptic.

Distribution (TDWG). Continent. South America.
Country /Province /State. Western South America. Peru.

Illustrations: None found.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Culms slender, 100 cm long. Culm-internodes distally pilose. Culm-nodes bearded. Lateral branches lacking. Leaf-sheaths keeled, pilose, with tubercle-based hairs. Leaf-sheath oral hairs bearded. Ligule an eciliate membrane, 0.5 mm long. Leaf-blades $18-30 \mathrm{~cm}$ long, $5-12 \mathrm{~mm}$ wide. Leaf-blade surface pubescent, hairy on both sides, with tubercle-based hairs. Leafblade margins scabrous.

Inflorescence. Inflorescence composed of racemes. Racemes 8, borne along a central axis, unilateral, $2.5-9.5 \mathrm{~cm}$ long. Central inflorescence axis 17 cm long, pilose. Rhachis wingless, angular, 0.8 mm wide. Raceme-bases brief, pilose. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, scabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, 1.5 mm long, 1 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume surface pubescent. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, obovate, 1 length of spikelet, membranous, 3 -veined, pubescent, obtuse. Fertile lemma obovate, 1.5 mm long, indurate, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. North America.
Country /Province /State. Mexico. Southeast Mexico.
Yucatan.

## Paspalum squamulatum Fourn. Mex. Pl. Enum., Gram. 11 (1886).

Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Mexico. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: IST: F.M. Liebmann 197, May 1841, Mexico: Huitmalco, Tinzutlan (US-207651). LT: Bourgeau 2640, 24 Jul 186?, Mexico: Veracruz: Orizaba (P; ILT: US-2856011, US-951635). LT designated by Chase, Contr. U.S. Natl. Herb. 28: 118 (1929). IST: Liebmann 198, May 1841, Mexico: in graminosis prope Chinantla, 1000 ft (MO, US-207651). ST: Botteri 115, Mexico: Veracruz: Orizaba.

Illustrations (Books): W.Burger, Flora Costaricensis 15, Gramineae: Fieldiana Botany New Series 4 (1980) (452, Fig 170).

Derivation (Clifford \& Bostock 2007): L. squama, scale; -ula, diminutive; -atum, possessing. Paleas, lemmas and glumes well developed.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms decumbent, 20-60 cm long, 1-2 mm diam., rooting from lower nodes. Culm-internodes thin-walled, distally glabrous. Culm-nodes glabrous. Lateral branches ample. Leaf-sheaths longer than adjacent culm internode, keeled, glabrous on surface, outer margin hairy. Ligule an eciliate membrane, $2.5-4.5 \mathrm{~mm}$ long, brown, lacerate. Collar glabrous or pubescent. Leaf-blade base broadly rounded. Leaf-blades $7-11 \mathrm{~cm}$ long, $8-13 \mathrm{~mm}$ wide, dark green. Leafblade midrib keeled beneath. Leaf-blade surface glabrous or pubescent.

Inflorescence. Inflorescence composed of racemes. Racemes 4-6, borne along a central axis, unilateral, $2-8 \mathrm{~cm}$ long. Central inflorescence axis $2-4 \mathrm{~cm}$ long. Rhachis wingless, angular, $0.5-0.7 \mathrm{~mm}$ wide. Raceme-bases brief, pilose. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, obtuse, $1.5-1.8 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, shorter than spikelet, thinner than fertile lemma. Upper glume ovate, $1.3-1.7 \mathrm{~mm}$ long, 0.9 length of spikelet, membranous, without keels, $3(-5)$-veined.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 3 -veined. Fertile lemma ovate, $1.5-1.7 \mathrm{~mm}$ long, indurate, pallid, without keel. Lemma surface striate. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 0.8-0.9 mm long, brown. Caryopsis with adherent pericarp, ellipsoid.
$2 n=40$ ( 2 refs TROPICOS).
Distribution (TDWG). Continent. North America, South America.
Country /Province /State. Mexico. Gulf (Mexico), Northwest Mexico, Southwest Mexico, Southeast Mexico. Mesoamerica. Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua, Panama.

Mexico State, Morelos, Puebla. Durango, Queretaro, San Luis Potosi, Tamaulipas. Veracruz. Baja California Sur, Sinaloa, Sonora. Colima, Guerrero, Jalisco, Michoacan, Nayarit, Oaxaca. Chiapas.

Paspalum standleyi Chase. Journ. Wash. Acad. Sc. xvii. 146. (1927).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Panama. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: P.C. Standley 30543, 11 Jan 1924, Panama: Panama (US-1269445).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): in honor of Paul Carpenter Standley (1884-1963) United States botanist.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, mat forming. Rhizomes elongated. Culms erect, 10-32 cm long, $0.5-1 \mathrm{~mm}$ diam. Culm-internodes thick-walled, distally glabrous or pilose. Culm-nodes pubescent. Leaf-sheaths glabrous on surface or pilose, outer margin hairy. Ligule an eciliate membrane, 0.2 mm long. Leaf-blade base with a brief petiole-like connection to sheath, petiole $0.1-0.2 \mathrm{~cm}$ long, petiole pubescent. Leaf-blades $2.5-7 \mathrm{~cm}$ long, $2.5-5 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pubescent, sparsely hairy. Leaf-blade apex abruptly acute.

Inflorescence. Inflorescence composed of racemes. Racemes 2-5, digitate, unilateral, 1-3 cm long. Central inflorescence axis $0.5-1 \mathrm{~cm}$ long. Rhachis wingless, flattened, $0.5-0.6 \mathrm{~mm}$ wide. Spikelet packing abaxial, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, compressed strongly, acute, $1.4-1.5 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, 1 length of spikelet, membranous, without keels, 2 -veined. Upper glume primary vein absent.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 2 -veined, without midvein. Fertile lemma elliptic, $1.2-1.3 \mathrm{~mm}$ long, coriaceous, pallid, without keel. Lemma surface striate. Lemma margins involute. Palea involute, coriaceous.

Flower and Fruit. Anthers 3, 0.8-0.9 mm long, dehiscent by a longitudinal slit or dehiscent by a subapical slit, purple. Caryopsis with adherent pericarp.

Derivation (Clifford \& Bostock 2007): L. star-shaped. Hairs at the base of the spikelet spreading stellately at maturity.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect or geniculately ascending, 40-80 cm long. Leaf-sheaths pilose, with tubercle-based hairs. Ligule a ciliolate membrane, 0.5 mm long. Leafblades erect, filiform or linear, involute, $8-25 \mathrm{~cm}$ long, $2-3 \mathrm{~mm}$ wide. Leaf-blade surface pilose, hairy adaxially, with tubercle-based hairs.

Inflorescence. Inflorescence composed of racemes. Peduncle tipped by a glumaceous appendage. Racemes $1-2$, single or paired, unilateral, $2.5-12 \mathrm{~cm}$ long. Rhachis broadly winged, membranous, folded longitudinally to embrace spikelets, with rounded midrib, $5-7 \mathrm{~mm}$ wide, light-coloured (yellow and purple), terminating in a barren extension, extension subulate. Spikelet packing abaxial, crowded, regular, 2 -rowed. Raceme-bases brief, pubescent. Spikelets solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, compressed strongly, plano-convex, acute, 3 mm long, falling entire. Spikelet callus pilose.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface pilose. Upper glume margins ciliate. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous, 2 -veined, ciliate on margins, bearing hairs $2-3$ mm long, acute. Fertile lemma ovate, $2.3-2.5 \mathrm{~mm}$ long, indurate, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose, clumped densely. Culms erect, 50-60 cm long. Culm-internodes distally glabrous. Leaf-sheaths keeled, pubescent. Ligule an eciliate membrane, 0.5 mm long. Leaf-blades erect, straight, $20-30 \mathrm{~cm}$ long, $3-6 \mathrm{~mm}$ wide. Leaf-blade surface pubescent, densely hairy. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes 5-7, borne along a central axis, ascending, straight, unilateral, $3-5 \mathrm{~cm}$ long. Central inflorescence axis $6-8 \mathrm{~cm}$ long. Rhachis wingless, angular. Spikelet packing abaxial. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, 0.5-1 mm long, glabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, acute, 3 mm long, 1.5 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume obovate, 1 length of spikelet, membranous, without keels.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous. Fertile lemma obovate, 2.5 mm long, indurate, pallid, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province/State. Brazil, Southern South America. Brazil West Central. Paraguay.

Paspalum tenellum Willd. Enum. Hort. Berol. 89. (1809).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), J.F.Veldkamp, Poaceae ms (Flora Malesiana).

TYPE from Mexico. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: Anon., Cult. in Berlin probably from material collected in Mexico (B-W-1608; IT: US-2856495 (fragm. ex B, M) ).

Recent Synonyms: Paspalum robustum (Hitchc. \& Chase) S.Denham.
Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. slender. Culms or inflorescence branches slender.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rootstock evident. Culms 15-160 cm long. Leaves cauline. Leaf-sheaths pilose, with tubercle-based hairs. Ligule an eciliate membrane, 2-3 mm long, brown. Leaf-blades lanceolate, $10-25 \mathrm{~cm}$ long, $10-20 \mathrm{~mm}$ wide. Leaf-blade surface pubescent. Leaf-blade apex acute or acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes 5-10, borne along a central axis, unilateral, $2-8 \mathrm{~cm}$ long. Central inflorescence axis $2.5-21 \mathrm{~cm}$ long. Rhachis wingless, 1 mm wide. Spikelet packing crowded, regular, 4 -rowed. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or obovate, dorsally compressed, planoconvex, $1.9-2.1 \mathrm{~mm}$ long, $1.2-1.3 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, shorter than spikelet or reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, $0.66-1$ length of spikelet, membranous, mid-green or purple (blotched), without keels, 3 -veined. Upper glume surface pilose, with tubercle-based hairs.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, mid-green or purple (blotched), 3 -veined, pilose, with tubercle-based hairs. Fertile lemma elliptic, $1.7-2 \mathrm{~mm}$ long, indurate, pallid, shiny, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
$2 n=60$ ( 1 ref TROPICOS).
Distribution (TDWG). Continent. North America, South America.
Country /Province /State. Mexico. Central Mexico, Northwest Mexico, Southwest Mexico. Mesoamerica, Caribbean, Western South America, Brazil. El Salvador, Guatemala. Trinidad-Tobago. Colombia, Ecuador. Brazil Northeast.

Bahia. Bahia. Distrito Federal, Mexico State, Morelos, Puebla. Aguascalientes, Guanajuato, Queretaro, Zacatecas. Veracruz. Sonora. Guerrero, Jalisco, Michoacan. Chiapas.

Paspalum thrasyoides (Trin.)S. Denham. Ann. Missouri Bot. Gard. 92(4): 521 (2005).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online (as Thrasya), W.D.Clayton \& K.Harman, GrassBase (2008) and online (as Thrasya).

TYPE from Brazil. Basionym or Replaced Name: Panicum thrasyoides Trin., Gram. Panic. 126 (1826). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: G.H. von Langsdorff s.n., Dec 1824, Brazil: ubique in campis siccis (LE-TRIN-983.03; IT: MO-2100890 (probable), US-81396 (fragm. ex LE)).

Recent Synonyms: Thrasya thrasyoides (Trin.) Chase, Proc. Biol. Soc. Wash. 24: 114 (1911).
Illustrations (Books): S.A.Renvoize, Gramineas de Bolivia (1998) (510, Fig 114 as Thrasya).
Derivation (Clifford \& Bostock 2007): Gk -oides, resembling. Resembling Thrasya with respect to the inflorescence.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, 30-100 cm long. Culm-nodes glabrous or bearded. Leaf-sheaths keeled, pilose, with tubercle-based hairs, outer margin hairy. Ligule an eciliate membrane, $1.5-3 \mathrm{~mm}$ long, truncate. Leaf-blades linear or lanceolate, $4-15 \mathrm{~cm}$ long, 3-6 mm wide. Leaf-blade surface pubescent to pilose, with tubercle-based hairs. Leaf-blade margins glabrous or tuberculate-ciliate.

Inflorescence. Inflorescence composed of racemes. Racemes 1, single, arcuate, unilateral, 4.5-12 cm long. Rhachis broadly winged, folded longitudinally to embrace spikelets, 2.5 mm wide, glabrous on surface or pubescent on surface, tuberculate on margins, ciliate on margins, terminating in a barren extension, extension flattened. Rhachis hairs white or yellow. Spikelet packing alternately adaxial and abaxial, regular, 1 -rowed. Spikelets pectinate, in pairs. Fertile spikelets sessile and pedicelled, 2 in the cluster. Pedicels present, fused to internode, united wholly.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or oblong, dorsally compressed, 3-3.5 mm long, 0.9 mm wide, falling entire.

Glumes. Glumes dissimilar, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, 0.3 mm long, 0.1 length of spikelet, hyaline, without keels, 0 -veined. Lower glume lateral veins absent. Lower glume apex acute. Upper glume elliptic, $1.5-2 \mathrm{~mm}$ long, $0.5-0.66$ length of spikelet, chartaceous, without keels, 3-5 -veined. Upper glume margins tuberculate, ciliate. Upper glume apex emarginate.

Florets. Basal sterile florets 1, male, with palea. Lemma of lower sterile floret elliptic or oblong, 1 length of spikelet, coriaceous, sulcate or readily splitting into two halves, without hair tufts or with basal tufts of hair, $0-1$ hair tufts in all, ciliate on margins (above), bearing white hairs, acute. Palea of lower sterile floret becoming indurate on flanks at maturity. Fertile lemma elliptic, 2.8 mm long, coriaceous, without keel. Lemma surface papillose or striate, with conspicuous apical hairs. Lemma margins involute. Lemma apex acute. Palea coriaceous.

Flower and Fruit. Lodicules 2, fleshy, truncate. Anthers 3.
Distribution (TDWG). Continent. South America.
Country /Province /State. Western South America, Brazil. Bolivia. Brazil West Central, Brazil North, Brazil Southeast.

Distrito Federal, Goiás, Mato Grosso do Sul. Pará, Tocantins. Minas Gerais.

## Paspalum thunbergii Kunth ex Steud. Syn. Pl. Gram. 28 (1854).

Accepted by: U.Quattrocchi, CRC World Dictionary of Grasses (2006), S-L Chen et al, Flora of China 22 (Poaceae) (2006), T.Koyama, Grasses of Japan and its neighboring regions (1987), W.D.Clayton \& N.Snow, Key to Pacific Grasses (2010).

TYPE from Japan. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Japan, Nagasaki: Thunberg (UPS holo).

Illustrations (Books): T.Koyama, Grasses of Japan and its neighbouring regions (1987) (360, Fig. 141), C-C Hsu, Flora of Taiwan, Vol 5 (1978) (592), C-C Hsu,Taiwan Grasses (1975), H.J.Noltie, The Grasses of Bhutan (2000) (713, Fig. 42), S-L Chen et al, Flora of China, Illustrations, Poaceae (2007) (Fig. 739), E.Hafliger \& E.Schultz, Grass Weeds, CIBA-GEIGY (1:106(1980)).

Derivation (Clifford \& Bostock 2007): in honor of Carl Pehr Thunberg (1743-1828) Swedish botanist and physician.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose, clumped loosely. Rhizomes short, knotty. Culms 40-90 cm long, $1-1.5 \mathrm{~mm}$ diam., 2-3 -noded. Lateral branches lacking. Leaf-sheaths $3-15 \mathrm{~cm}$ long, pilose. Ligule an eciliate membrane, $1-2 \mathrm{~mm}$ long, truncate. Leaf-blades $10-30 \mathrm{~cm}$ long, $5-10 \mathrm{~mm}$ wide. Leaf-blade surface pilose, hairy on both sides. Leaf-blade apex acute.

Inflorescence. Inflorescence composed of racemes. Racemes 2-5, borne along a central axis, unilateral, $3-8 \mathrm{~cm}$ long. Central inflorescence axis $3-8 \mathrm{~cm}$ long. Rhachis narrowly winged, angular, 1 mm wide, scaberulous on margins. Spikelet packing 2 -rowed. Raceme-bases brief, pilose, hairy at base. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, unequal, $0.5-0.8 \mathrm{~mm}$ long.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate or orbicular or obovate, dorsally compressed, plano-convex, obtuse, $2.5-2.7 \mathrm{~mm}$ long, $1.9-2.2 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume orbicular, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume margins eciliate or ciliolate. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, orbicular, 1 length of spikelet, membranous, 3 -veined, obtuse. Fertile lemma orbicular, gibbous, $2.5-2.7 \mathrm{~mm}$ long, indurate, without keel. Lemma surface punctate. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. $2 n=40$ ( 1 ref TROPICOS).
Distribution (TDWG). Continent. Temperate Asia, Tropical Asia.
Country /Province /State. Caucasus, Western Asia, China, Eastern Asia. China South Central, China North-Central, China Southeast. Japan Honshu, or Shikoku, or Kyushu. Japan, Korea, Nansei-Shoto, Taiwan. Indian Subcontinent. Eastern Himalaya, India. Niue.

Hebei, Shaanxi, Shandong. Anhui, Fujian, Guangdong, Guangxi, Henan, Hunan, Jiangsu, Jiangxi, Zhejiang. Guizhou, Hubei, Sichuan, Yunnan. Darjeeling, Bhutan, Sikkim.

Paspalum tillettii G. Davidse \& F. Zuloaga. Novon, 2(3): 195 (1992).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Venezuela. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: G. Davidse, O. Huber, S.S. Tillett 16920, 30 Apr 1979-1 May 1979, Venezuela (MO-2745633).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): in honor of Stephen Szlatenyi Tillett (1930-) United States botanist resident in Venezuela.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths pilose, with white hairs. Culms $23-62 \mathrm{~cm}$ long. Culm-internodes distally glabrous or pubescent. Culm-nodes brown, glabrous or pubescent. Lateral branches lacking. Leaves mostly basal. Leaf-sheaths without keel, striately veined, glabrous on surface or pilose. Leaf-sheath oral hairs ciliate. Ligule a ciliolate membrane, $0.2-0.5 \mathrm{~mm}$ long. Leaf-blades filiform, involute, $4-17 \mathrm{~cm}$ long, $0.3-0.6 \mathrm{~mm}$ wide. Leaf-blade surface ribbed, grooved adaxially. Leafblade margins glabrous or ciliate, hairy at base.

Inflorescence. Inflorescence composed of racemes. Peduncle $8-22 \mathrm{~cm}$ long, glabrous. Racemes 2, paired, flexuous, unilateral, $1.5-6 \mathrm{~cm}$ long. Central inflorescence axis 0 cm long. Rhachis wingless, angular, $0.2-0.5 \mathrm{~mm}$ wide. Spikelet packing abaxial. Raceme-bases brief, hirsute, with 2-4 mm long hairs. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $0.2-0.5 \mathrm{~mm}$ long, glabrous or pubescent.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, 1.4-1.8 mm long, $0.7-0.8 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure or two, shorter than spikelet or reaching apex of florets, thinner than fertile lemma. Lower glume lanceolate, 0.5-0.66 length of spikelet. Lower glume surface pilose. Upper glume ovate, 0.9-1 length of spikelet, membranous, without keels, 3 -veined. Upper glume lateral veins obscure. Upper glume surface glabrous or pubescent, with capitate hairs. Upper glume margins ciliate (with capitate hairs). Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, $2-3$-veined, without midvein or with obscure midvein, obscurely veined, glabrous or pubescent, with capitate hairs, ciliate on margins (with capitate hairs). Fertile lemma elliptic, $1.4-1.8 \mathrm{~mm}$ long, $0.7-0.8 \mathrm{~mm}$ wide, indurate, dark brown, shiny, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers $3,0.8-1 \mathrm{~mm}$ long. Caryopsis with adherent pericarp, obovoid, $0.8-1 \mathrm{~mm}$ long. Embryo 0.4 length of caryopsis. Hilum punctiform.

Distribution (TDWG). Continent. South America.
Country /Province /State. Northern South America, Western South America. Venezuela. Colombia.

Derivation (Clifford \& Bostock 2007): Gk. thrix, hair; phyllon, leaf. Leaf-blades hair-like.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose, clumped densely. Culms erect, 30-50 cm long. Culm-internodes distally glabrous. Culm-nodes black, glabrous. Lateral branches lacking. Leaf-sheaths keeled, hirsute. Ligule an eciliate membrane. Leaf-blades flexuous, filiform, involute, 1 mm wide, flaccid. Leaf-blade apex attenuate, filiform.

Inflorescence. Inflorescence composed of racemes. Racemes 5, borne along a central axis, unilateral, $2-2.5 \mathrm{~cm}$ long. Rhachis angular, glabrous on surface. Spikelet packing 4 -rowed. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, 2 mm long, 1.2 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, ovate, 1 length of spikelet, membranous. Fertile lemma elliptic, gibbous, 2.5 mm long, indurate, without keel. Lemma surface punctate. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Distribution (TDWG). Continent. South America.
Country /Province/State. Northern South America, Western South America, and Brazil. Bolivia. Brazil West Central, Brazil Northeast, Brazil North.

Bahia. Mato Grosso. Bahia, Piaui. Pará.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Basal innovations extravaginal. Culms erect, $60-70 \mathrm{~cm}$ long, 3 -noded. Lateral branches lacking. Leaf-sheath oral hairs bearded. Ligule an eciliate membrane. Leaf-blades flat or convolute, $20-30 \mathrm{~cm}$ long, $5-7 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pubescent. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes 3-5, borne along a central axis, unilateral, $3-10 \mathrm{~cm}$ long. Central inflorescence axis $3-12 \mathrm{~cm}$ long. Rhachis angular. Spikelet packing irregular, 4 rowed. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, oblong.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong or ovate, dorsally compressed, plano-convex, obtuse, 3 mm long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, 1 length of spikelet, membranous, without keels, 3-5 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret ovate, 1 length of spikelet, membranous, 3-5 -veined, obtuse. Fertile lemma elliptic, 3 mm long, indurate, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province/State. Brazil. Brazil West Central, Brazil Southeast.
Goias. Distrito Federal, Goiás. Minas Gerais.

Paspalum trinii Swallen. Phytologia, xiv. 360 (1967).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Brazil. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: J.R. Swallen 4507, 9-10 May 1934, Brazil: Ceara (US-1613382; IT: K).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): in honor of Carl Bernhard Trinius (1778-1844) German-born Russian physician and agrostologist.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Annual. Culms erect, 90 cm long. Culm-internodes distally glabrous. Culm-nodes glabrous or pubescent. Lateral branches ample, arising from lower culm. Leaf-sheaths mostly shorter than adjacent culm internode, antrorsely scabrous, pilose. Ligule an eciliate membrane, $2.5-3 \mathrm{~mm}$ long. Leaf-blades $17-28 \mathrm{~cm}$ long, 3-4 mm wide. Leaf-blade surface scabrous, pilose, sparsely hairy. Leafblade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes 10-12, borne along a central axis, appressed or ascending, unilateral, $2-3.5 \mathrm{~cm}$ long. Central inflorescence axis 10 cm long. Rhachis angular, 0.8 mm wide, puberulous on surface, scabrous on margins, ciliate on margins (sparsely). Spikelet packing abaxial. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets oblong or obovate, dorsally compressed, planoconvex, obtuse, $1.9-2 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume oblong or obovate, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume surface scabrous. Upper glume margins scabrous.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 3 -veined, scabrous, scabrous on margins. Fertile lemma oblong or obovate, 2.5 mm long, indurate, pallid, without keel. Lemma surface striate. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Distribution (TDWG). Continent. South America.
Country /Province/State. Northern South America, Brazil. Guyana. Brazil Northeast.
Ceara, Rio Grande do Norte, Paraiba, Penambuco, Alagoas, Sergipe. Ceará.
Paspalum trinitensis Mez) S.Denham. Ann. Missouri Bot. Gard. 92(4): 521 (2005).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online (as Thrasya), W.D.Clayton \& K.Harman, GrassBase (2008) and online (as Thrasya).

Basionym or Replaced Name: Thrasya trinitensis Mez, Fedde, Repert. xv. 125 (1918).
Illustrations (Books): J.A.Steyermark et al, Flora of the Venezuelan Guayana Vol. 8 (2004) (286, Fig. 232as Thrasya).

Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From Trinidad, one of the two Carribean islands that constitute the Republic of Trinidad and Tobago.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, slender, $20-30 \mathrm{~cm}$ long. Culminternodes distally glabrous. Culm-nodes bearded. Lateral branches lacking. Leaf-sheaths mostly shorter than adjacent culm internode, keeled, outer margin hairy. Leaf-sheath oral hairs ciliate. Ligule an eciliate membrane, 0.7 mm long, pilose on abaxial surface. Leaf-blades 2-5 cm long, $1.5-3 \mathrm{~mm}$ wide. Leaf-blade surface pilose, with tubercle-based hairs.

Inflorescence. Inflorescence composed of racemes. Racemes 1, single, straight, unilateral, $1.5(-8) \mathrm{cm}$ long. Rhachis narrowly winged, folded longitudinally to embrace spikelets, 2 mm wide, glabrous on surface, tuberculate on margins, setose on margins, terminating in a barren extension, extension flattened. Rhachis hairs white or yellow. Spikelet packing alternately adaxial and abaxial, regular, 1 -rowed. Spikelets pectinate, in pairs. Fertile spikelets sessile and pedicelled, 2 in the cluster. Pedicels present, fused to internode, united wholly.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, 2.5 mm long, 0.7 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure or two, dissimilar, shorter than spikelet, thinner than fertile lemma. Lower glume ovate, $0-0.3(-1.2) \mathrm{mm}$ long, $0.1(-0.5)$ length of spikelet, hyaline, without keels, $0-1$-veined. Lower glume lateral veins absent. Lower glume surface glabrous or puberulous. Lower glume apex acute. Upper glume elliptic, 0.33 length of spikelet, hyaline, without keels, $2-3$-veined. Upper glume primary vein absent or distinct. Upper glume margins pubescent. Upper glume apex emarginate or truncate.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, coriaceous, sulcate and readily splitting into two halves, with conspicuous apical hairs, pubescent on midvein (above), acute. Palea of lower sterile floret becoming indurate on flanks at maturity. Fertile lemma elliptic, 2 mm long, coriaceous, without keel. Lemma surface papillose and striate, with conspicuous apical hairs. Lemma margins involute, ciliate, hairy above. Lemma apex acute. Palea coriaceous. Palea apex glabrous or ciliate.

Distribution (TDWG). Continent. South America.
Country /Province /State. Mesoamerica, Caribbean, Northern South America, Western South America, and Brazil. Belize, Costa Rica, Honduras, Nicaragua. Guyana, Venezuela. Colombia. Brazil West Central, Brazil North.

Roraima, Para, Amapa, Minas Gerais, Rio de Janeiro, Espirito Santo. Mato Grosso. Tocantins.

Illustrations (Books): W.Burger, Flora Costaricensis 15, Gramineae: Fieldiana Botany New Series 4 (1980) (456, Fig 172).

Derivation (Clifford \& Bostock 2007): L. turris, tower; formis, appearance. A robust species.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose, clumped densely. Butt sheaths glabrous or pilose. Basal innovations flabellate. Culms erect, robust, $200-300 \mathrm{~cm}$ long, $4-8 \mathrm{~mm}$ diam. Culm-internodes thin-walled, distally glabrous. Culm-nodes glabrous or pubescent. Lateral branches lacking. Leaf-sheaths keeled, glabrous on surface, outer margin hairy. Leaf-sheath oral hairs ciliate. Ligule an eciliate membrane, $2-5 \mathrm{~mm}$ long, brown, lacerate. Leaf-blades $40-95 \mathrm{~cm}$ long, $12-17 \mathrm{~mm}$ wide. Leaf-blade margins scabrous. Leaf-blade apex attenuate.

Inflorescence. Inflorescence composed of racemes. Racemes numerous, 40-150, borne along a central axis, ascending or drooping, unilateral, $7-11 \mathrm{~cm}$ long. Central inflorescence axis $15-40 \mathrm{~cm}$ long. Rhachis narrowly winged, $1.2-1.5 \mathrm{~mm}$ wide, ciliate on margins. Rhachis hairs $4-6 \mathrm{~mm}$ long. Spikelet packing 4 rowed. Raceme-bases brief, pilose. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets obovate, dorsally compressed, obtuse, $2.2-2.5 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume obovate, 1 length of spikelet, membranous, purple, without keels, 3 -veined. Upper glume apex obtuse.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, obovate, 1 length of spikelet, membranous, 3 -veined, obtuse. Fertile lemma ovate, 2.2-2.5 mm long, indurate, yellow, without keel. Lemma surface striate. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1.5-1.6 mm long, purple. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. North America, South America.
Country /Province /State. Mexico. Southwest Mexico, Southeast Mexico. Mesoamerica. Costa Rica, Guatemala, Honduras, Nicaragua.

TYPE from Dominican Republic. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: HT: E.L. Ekman H 13712, 9 Oct 1929, Dominican Republic: Hispaniola I., Azua Prov. (US1502227).

Illustrations (Books): A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (237, Fig. 190).
Derivation (Clifford \& Bostock 2007): L. -ana, indicating connection. In honor of Ignatz Urban (1848-1931) German botanist.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rhizomes short, scaly. Butt sheaths persistent and investing base of culm. Culms $80-100 \mathrm{~cm}$ long. Lateral branches sparse, arising from lower culm. Leaf-sheaths hirsute, with tubercle-based hairs. Ligule an eciliate membrane, $0.5-1 \mathrm{~mm}$ long. Collar pilose. Leaf-blades aciculate, terete, $30-60 \mathrm{~cm}$ long, $1.5-2 \mathrm{~mm}$ wide, stiff. Leaf-blade apex pungent.

Inflorescence. Inflorescence composed of racemes. Racemes 3-5, borne along a central axis, flexuous, unilateral, $8-15 \mathrm{~cm}$ long. Central inflorescence axis $8-20 \mathrm{~cm}$ long. Rhachis wingless, flattened, $0.7-0.8 \mathrm{~mm}$ wide. Spikelet packing abaxial, lax or distant. Spikelets solitary or in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, acute, $3.5-3.8 \mathrm{~mm}$ long, 1.5 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 5 -veined. Upper glume surface glabrous or puberulous. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 5 -veined, acute. Fertile lemma elliptic, 3 mm long, indurate, dark brown, without keel. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province/State. Caribbean. Dominican Republic.

Derivation (Clifford \& Bostock 2007): L. vagina, sheath; -ata, possessing. Inflorescences concealed or partially concealed in uppermost leaf-sheaths.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, mat forming. Stolons present. Culms decumbent, 8-60 cm long. Ligule an eciliate membrane. Leaf-blades flat or convolute, $2.5-15 \mathrm{~cm}$ long, $3-8 \mathrm{~mm}$ wide.

Inflorescence. Inflorescence composed of racemes. Racemes 2(-5), paired or digitate, unilateral, 1.57.5 cm long. Rhachis narrowly winged, angular, $1-2 \mathrm{~mm}$ wide. Spikelet packing abaxial, regular, 2 -rowed. Spikelets solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or ovate, dorsally compressed, compressed strongly, plano-convex, acute, $3-4.5 \mathrm{~mm}$ long, falling entire.

Glumes. Glumes both absent or obscure or two (rarely), reaching apex of florets, thinner than fertile lemma. Lower glume when present ovate, $0.1-0.2$ length of spikelet, hyaline, 0 -veined. Lower glume lateral veins absent. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 2-3 -veined. Upper glume surface glabrous. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 2-3-veined, acute. Fertile lemma ovate, 2.5 mm long, indurate, pallid, without keel. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. $n=10$ ( 1 ref TROPICOS). $2 n=20$ ( 1 ref TROPICOS).

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, 95 cm long, 1.5 mm diam., 5-6noded. Culm-internodes distally glabrous. Culm-nodes brown, glabrous. Lateral branches lacking. Leafsheaths $7.5-9.5 \mathrm{~cm}$ long, hirsute, with tubercle-based hairs, outer margin hairy. Ligule an eciliate membrane, $0.5-0.6 \mathrm{~mm}$ long, brown, acute. Leaf-blades $15-26 \mathrm{~cm}$ long, $5-7 \mathrm{~mm}$ wide. Leaf-blade surface hirsute, densely hairy, hairy adaxially. Leaf-blade margins scaberulous. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Peduncle $25-28 \mathrm{~cm}$ long. Racemes 2, paired, unilateral, $5-7 \mathrm{~cm}$ long. Rhachis narrowly winged, $1.3-1.4 \mathrm{~mm}$ wide, terminating in a barren extension. Spikelet packing crowded, 2 -rowed. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, compressed strongly, plano-convex, $6.5-6.7 \mathrm{~mm}$ long, 3.2 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, exceeding apex of florets, thinner than fertile lemma. Upper glume ovate, auriculate at base, 1 length of spikelet, chartaceous, without keels, winged on margins, 5 -veined. Upper glume lateral veins with cross-veins. Upper glume margins eciliate. Upper glume apex obtuse or acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret obovate, auriculate at base, $5.5-5.7 \mathrm{~mm}$ long, $0.8-0.9$ length of spikelet, chartaceous, glabrous. Fertile lemma elliptic, $3.8-4.5 \mathrm{~mm}$ long, 1.3 mm wide, cartilaginous, pallid, without keel. Lemma margins involute, ciliolate. Lemma apex pubescent. Palea involute, coriaceous.

Flower and Fruit. Lodicules 2, 0.4 mm long. Anthers 3, 2 mm long, purple. Stigmas 2. Caryopsis with adherent pericarp.

Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil West Central, Brazil North.
Goiás. Tocantins.

## Paspalum variabile (Fourn.) Nash. N. Amer. Fl. xvii. 180 (1912).

Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from Mexico. Basionym or Replaced Name: Dimorphostachys variabilis E. Fourn., Mexic. Pl. 2: 15-16(1886). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: LT: Ghiesbreght s.n., Mexico: absque loco (P; ILT: P, US-865861 (fragm. ex P)). LT designated by Chase, Contr. U.S. Natl. Herb. 28: 108 (1929). ST: Bott., Mexico: Orizba (hb. Fourn.).

Illustrations (Journals): Ann. Missouri Bot. Gard. (92: 525: Fig. 24 (2005)).
Derivation (Clifford \& Bostock 2007): L. varius, variable; -abilis, indicating capacity. Species polymorphic and usually with many varieties.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect or geniculately ascending, 70-100 cm long. Culm-internodes elliptical in section, distally glabrous. Culm-nodes glabrous. Lateral branches lacking. Leaf-sheaths keeled, glabrous on surface, outer margin hairy. Ligule an eciliate membrane, 2-3 mm long. Collar pubescent. Leaf-blades ascending, $10-30 \mathrm{~cm}$ long, $7-18 \mathrm{~mm}$ wide. Leaf-blade surface glabrous. Leaf-blade margins scabrous, glabrous or ciliate.

Inflorescence. Inflorescence composed of racemes, terminal and axillary. Racemes (1-)2-4, single or paired or borne along a central axis, unilateral, 4-9 cm long. Central inflorescence axis $2-7 \mathrm{~cm}$ long. Rhachis wingless, angular. Spikelets in pairs. Fertile spikelets sessile and pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic or obovate, dorsally compressed, planoconvex, subacute, 2.9-3.2 mm long, 1.7 mm wide, falling entire.

Glumes. Glumes two, reaching apex of florets, thinner than fertile lemma. Lower glume ovate, $0.2-$ 0.75 length of spikelet, membranous, much thinner on margins, eglandular or glandular, 1-3 -veined. Lower glume lateral veins absent or distinct. Lower glume surface pubescent. Lower glume apex acute. Upper glume elliptic, 1 length of spikelet, membranous, dark brown, glandular, without keels, 5 -veined. Upper glume surface pubescent. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, dark brown, 5 -veined, pubescent, acute. Fertile lemma elliptic, 2.7 mm long, indurate, pallid, without keel. Lemma surface striate. Lemma margins involute. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. North America, South America.
Country /Province /State. Mexico. Central Mexico, Northeast Mexico, Gulf (Mexico), Pacific Is (Mexico), Southwest Mexico, Southeast Mexico. Mesoamerica. Costa Rica, Guatemala, Honduras.

Morelos, Puebla. Hidalgo, Queretaro, Tamaulipas. Veracruz. Colima, Jalisco, Michoacan, Oaxaca. Chiapas.

Chase 12407, 11 Mar 1940, Venezuela: Federal District: sabanas de Cotiza (US-1762130; IT: VEN (fragm. ex US)).

Illustrations: None found.
Derivation (Clifford \& Bostock 2007): L. -ana, indicating location. From Venezuela.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Culms erect, 50 cm long. Culm-internodes thin-walled, $4-6 \mathrm{~cm}$ long, distally hispid. Culm-nodes bearded. Lateral branches sparse, arising from lower culm. Leaf-sheaths longer than adjacent culm internode, as wide as blade at the collar, outer margin hairy. Ligule an eciliate membrane, 0.5 mm long, brown. Leaf-blades flexuous, flat or conduplicate, $15-20 \mathrm{~cm}$ long, 6-8 mm wide. Leaf-blade surface hispid. Leaf-blade margins ciliate.

Inflorescence. Inflorescence composed of racemes, terminal or terminal and axillary, with 1-3 peduncles per sheath. Racemes 1, single, arcuate, unilateral, $8-13 \mathrm{~cm}$ long. Rhachis narrowly winged, folded longitudinally to embrace spikelets, 2 mm wide, pubescent on surface, ciliate on margins. Spikelet packing irregular. Spikelets in pairs. Fertile spikelets pedicelled, 2 in the cluster. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, turgidly plano-convex, subacute, 4 mm long, 2 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, shorter than spikelet, thinner than fertile lemma. Upper glume ovate, 0.9 length of spikelet, membranous, without keels, 3 -veined. Upper glume surface hispidulous.

Florets. Basal sterile florets 1, barren, with palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, cartilaginous, 3 -veined, sulcate or readily splitting into two halves, hispidulous. Palea of lower sterile floret 1 length of lemma, pubescent, adorned on flanks. Fertile lemma ovate, 3.5 mm long, 1.5 mm wide, indurate, without keel. Lemma surface papillose. Lemma margins involute, pubescent. Lemma apex acute. Palea involute, indurate.

Flower and Fruit. Anthers 3. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province/State. Northern South America. Venezuela.

Paspalum veredense G.H. Rua, R.C. Oliveira, Valls \& Graciano-Ribeiro. Syst. Bot. 33(2): 271-272, f. 2e-f, 5b, 6, 7a. (2008).

Lima 695 (HT: CEN; IT: BAA, RB, US).

Illustrations: None found.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose, clumped densely. Rhizomes short. Culms erect, $70-110 \mathrm{~cm}$ long, 2 mm diam., 3-4 -noded. Culm-internodes terete, thin-walled, distally glabrous. Culmnodes brown. Lateral branches lacking. Leaves without demarcation between sheath and blade. Leafsheaths $7-12 \mathrm{~cm}$ long, keeled, striately veined, glabrous on surface or hirsute, outer margin hairy. Ligule an eciliate membrane, 0.7 mm long, obtuse. Leaf-blades aciculate, terete, elliptic in section, $40-65 \mathrm{~cm}$ long, 11.5 mm wide, glaucous. Leaf-blade surface glabrous, hairless except near base. Leaf-blade apex pungent.

Inflorescence. Inflorescence composed of racemes. Peduncle $25-40 \mathrm{~cm}$ long, glabrous. Racemes 2-6, paired or digitate, flexuous, unilateral, $4.5-11.5 \mathrm{~cm}$ long. Central inflorescence axis $2-6 \mathrm{~cm}$ long, tip without extension or with blunt extension. Rhachis wingless, angular, $0.7-0.9 \mathrm{~mm}$ wide, scabrous on surface. Spikelet packing contiguous, 2 -rowed. Raceme-bases hirsute. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, oblong, $0.5-1 \mathrm{~mm}$ long, puberulous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, plano-convex, 3.8-4.8 mm long, $1.2-1.4 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, $3.7-4.6 \mathrm{~mm}$ long, 1 length of spikelet, membranous, glaucous, without keels, 5 -veined. Upper glume surface wrinkled. Upper glume margins ciliate. Upper glume hairs white, $1-2 \mathrm{~mm}$ long. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, $3.7-4.6 \mathrm{~mm}$ long, 1 length of spikelet, membranous, wrinkled. Fertile lemma elliptic, gibbous, $3.5-3.8 \mathrm{~mm}$ long, $1.2-1.5 \mathrm{~mm}$ wide, coriaceous, pallid, without keel, 3 -veined, 0-3veined. Lemma surface papillose. Lemma margins involute. Lemma apex acute. Palea embraced by lemma, involute, coriaceous.

Flower and Fruit. Lodicules 2. Anthers 3, 1.8 mm long, purple.
Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil West Central, Brazil Northeast, Brazil North.
Goiás. Bahia, Maranhão, Piaui. Tocantins.

Illustrations (Journals): Systematic Botany (33: 269, Fig. 4 (2008)).
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths persistent and investing base of culm, with compacted dead sheaths. Culms erect, $60-75 \mathrm{~cm}$ long, 1 mm diam., 3-7 -noded. Culminternodes distally glabrous or pubescent. Culm-nodes bearded. Lateral branches sparse, arising from lower culm. Leaves without demarcation between sheath and blade. Leaf-sheaths $1-11 \mathrm{~cm}$ long, keeled, striately veined, glabrous on surface or hirsute. Ligule an eciliate membrane, 0.3 mm long, erose, obtuse. Leafblades flat or involute, $15-25 \mathrm{~cm}$ long, $3-5(-10) \mathrm{mm}$ wide. Leaf-blade surface glabrous or hirsute, hairy adaxially. Leaf-blade margins scabrous, ciliate, hairy at base. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Peduncle $9-17 \mathrm{~cm}$ long, pubescent above. Racemes 2-6, paired or borne along a central axis, unilateral, 2-6 cm long. Central inflorescence axis 2-6 cm long, tip subulate. Rhachis broadly winged, membranous, folded longitudinally to embrace spikelets, 5-

12 mm wide, light-coloured (green, orange \& purple), terminating in a barren extension, extension flattened. Spikelet packing abaxial, crowded, 2 -rowed. Raceme-bases pubescent. Spikelets solitary. Fertile spikelets sessile.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets ovate, dorsally compressed, plano-convex, 2-2.9 mm long, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume ovate, $2-2.9 \mathrm{~mm}$ long, 1 length of spikelet, membranous, pallid or light brown, without keels, 3 -veined. Upper glume surface pilose, hairy at apex, with tubercle-based hairs, with basal tufts of hair (2 tufts near apex). Upper glume hairs $2-2.5 \mathrm{~mm}$ long. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret oblong or obovate, $1.6-2.3 \mathrm{~mm}$ long, 0.8 length of spikelet, membranous, 2 -veined, prominently veined, concave across back, pilose, hairy at apex, with marginal tufts of hair, 2 hair tufts in all (near apex), obtuse. Fertile lemma elliptic or ovate, $2-2.1 \mathrm{~mm}$ long, $0.7-0.8 \mathrm{~mm}$ wide, coriaceous, pallid, without keel, 3 -veined, $0-3$ veined. Lemma lateral veins obscure. Lemma surface puberulous, hairy above. Lemma margins involute. Lemma apex acuminate. Palea involute, coriaceous. Palea surface puberulous, hairy above.

Flower and Fruit. Lodicules absent. Anthers 3, 2.2 mm long, yellow. Caryopsis with adherent pericarp, obovoid, dorsally compressed, plano-convex, 1.1 mm long. Hilum elliptic, 0.25 length of caryopsis.

Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil West Central, Brazil Northeast, Brazil North, Brazil Southeast.

Illustrations (Journals): Novon (10: 185 Fig. 1 (2000)).
Derivation (Clifford \& Bostock 2007): L. -ense, denoting origin. From Volcan, Argentina.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Rhizomes elongated, scaly, glabrous. Basal innovations extravaginal. Culms $45-60 \mathrm{~cm}$ long, 2.4-3 mm diam., 3-6 -noded. Culm-internodes $2.5-15 \mathrm{~cm}$ long, yellow, striate. Culm-nodes swollen, brown, glabrous or pubescent. Leaf-sheaths $9.5-22 \mathrm{~cm}$ long, keeled, striately veined, glabrous on surface or pilose, outer margin hairy. Ligule an eciliate membrane, 2-3 mm long, brown, truncate. Leaf-blades lanceolate, $12-22 \mathrm{~cm}$ long, $7-13 \mathrm{~mm}$ wide. Leaf-blade surface glabrous or pilose, hairy abaxially, with tubercle-based hairs. Leaf-blade margins tuberculate-ciliate. Leafblade apex attenuate.

Inflorescence. Inflorescence composed of racemes. Peduncle 9-25 cm long, glabrous. Racemes 4-19, borne along a central axis, unilateral, 4-9 cm long. Central inflorescence axis $6-10 \mathrm{~cm}$ long, glabrous. Rhachis angular, $1-1.6 \mathrm{~mm}$ wide, ciliate on margins, terminating in a barren extension. Spikelet packing 4 rowed. Raceme-bases pilose. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, oblong, unequal, $0.5-1.3 \mathrm{~mm}$ long, glabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, concavo-convex, 2.53 mm long, $1.1-1.2 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, shorter than spikelet, thinner than fertile lemma. Upper glume elliptic, 0.75 length of spikelet, membranous, without keels, 3 -veined. Upper glume primary vein conspicuous. Upper glume surface pubescent. Upper glume margins tuberculate, ciliate. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 3 -veined, prominently veined, glabrous. Fertile lemma elliptic, $2.5-3 \mathrm{~mm}$ long, indurate, without keel, 7 -veined, more than 3 -veined. Lemma surface papillose. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Lodicules 2, 0.3 mm long. Anthers 3, $1.6-2.2 \mathrm{~mm}$ long, purple. Caryopsis with adherent pericarp, ellipsoid, 2 mm long. Embryo 0.33 length of caryopsis. Hilum elliptic.

Distribution (TDWG). Continent. South America.
Country /Province /State. Western South America and Southern South America. Bolivia. Argentina South.

Anton, Flora Argentina 3 - 1, Aristidoideae a Pharoideae (2012) (443), M.E.Barkworth et al, Flora of North America north of Mexico Vol 25 Poaceae, part 2 (2003) (585), A.S.Hitchcock, Manual of the Grasses of the West Indies (1936) (236, Fig. 188), E.Judziewicz, Flora of the Guianas, 187. Poaceae (1990) (467, Fig 82).

Derivation (Clifford \& Bostock 2007): in honor of Charles Wright (1811-1885) United States botanist.
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Culms decumbent, 150-170 cm long, rooting from lower nodes. Lateral branches lacking. Leaves cauline. Leaf-sheaths loose, longer than adjacent culm internode, glabrous on surface. Leaf-sheath oral hairs ciliate. Ligule an eciliate membrane, 1 mm long. Leaf-blades conduplicate, $20-40 \mathrm{~cm}$ long, 5 mm wide. Leaf-blade margins scabrous.

Inflorescence. Inflorescence composed of racemes. Racemes 5-9, borne along a central axis, ascending, unilateral, $4-8 \mathrm{~cm}$ long. Central inflorescence axis $8-10 \mathrm{~cm}$ long. Rhachis wingless, angular, $1.5-2 \mathrm{~mm}$ wide, scaberulous on margins, glabrous on margins. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, acute, $2.2-2.5 \mathrm{~mm}$ long, 1.4 mm wide, falling entire.

Glumes. Glumes one the lower absent or obscure, reaching apex of florets, thinner than fertile lemma. Upper glume elliptic, 1 length of spikelet, membranous, without keels, 3 -veined. Upper glume apex acute.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, 1 length of spikelet, membranous, 3 -veined, acute. Fertile lemma elliptic, 2.2 mm long, 1.2 mm wide, indurate, dark brown, without keel. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. North America, South America.
Country /Province /State. South-central USA, Mexico. Texas. Southeast Mexico. Mesoamerica, Caribbean, Northern South America, Western South America, Brazil, Southern South America. Cuba. Venezuela. Bolivia, Colombia. Brazil West Central, Brazil North. Paraguay, Uruguay.

## Paspalum yecorae Sánchez-Ken. Revista Mexicana de Biodiversidad 81: 629-647 (2010).

TYPE from Mexico. T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Sonora: Mpio. Yécora; 4 km W of Agua Amarilla, 18.9 km W of Tepoca (Km 196 E of Hermosillo) on Mex 16, A.L. Reina et al., 839 (holotype: MEXU).

Illustrations (Journals): Revista Mexicana de Biodiversidad (640, Fig 3 (2010)).
Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial. Butt sheaths persistent and investing base of culm, with fibrous dead sheaths. Culms decumbent, 80 cm long, rooting from lower nodes. Culm-internodes elliptical in section, $6-7 \mathrm{~cm}$ long, distally glabrous. Culm-nodes brown, glabrous or pubescent. Lateral branches sparse, arising from mid culm. Leaf-sheaths subequal to internodes, glabrous on surface. Leaf-sheath oral hairs ciliate (sparsely). Ligule an eciliate membrane, $1.8-2.8 \mathrm{~mm}$ long, brown. Collar glabrous or ciliate. Leaf-blade base broadly rounded or cordate. Leaf-blades linear or lanceolate, $9-20 \mathrm{~cm}$ long, $6-9 \mathrm{~mm}$ wide. Leaf-blade midrib keeled beneath. Leaf-blade surface glabrous. Leaf-blade margins scaberulous. Leafblade apex attenuate.

Inflorescence. Inflorescence composed of racemes, terminal and axillary. Racemes 13, borne along a central axis, ascending, unilateral, $1.5-4 \mathrm{~cm}$ long. Central inflorescence axis 6 cm long, glabrous. Rhachis wingless, flattened, $0.5-0.6 \mathrm{~mm}$ wide, scaberulous on margins. Spikelet packing 4 -rowed. Raceme-bases brief, pilose. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, unequal, $0.5-1 \mathrm{~mm}$ long, glabrous.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the
lower floret male or barren, the upper fertile. Spikelets elliptic or obovate, dorsally compressed, planoconvex, obtuse or subacute, $1.4-1.5 \mathrm{~mm}$ long, $1.1-1.2 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, shorter than spikelet, thinner than fertile lemma. Upper glume ovate, $1.3-1.4 \mathrm{~mm}$ long, 0.9 length of spikelet, membranous or chartaceous, without keels, 5 veined. Upper glume surface glabrous. Upper glume hairs 1 mm long.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret similar to upper glume, elliptic, $1.4-1.5 \mathrm{~mm}$ long, 1 length of spikelet, membranous or chartaceous, 3-5 -veined. Fertile lemma ovate, $1.4-1.5 \mathrm{~mm}$ long, $1.1-1.2 \mathrm{~mm}$ wide, indurate, pallid, without keel. Lemma surface papillose and striate. Lemma margins involute. Lemma apex obtuse. Palea involute, indurate.

Flower and Fruit. Lodicules 2, 0.3 mm long. Anthers 3, $0.3-0.9 \mathrm{~mm}$ long.
Distribution (TDWG). Continent. North America.
Country /Province/State. Mexico. Northwest Mexico.
Sonora.

Illustrations (Journals): Novon (5:149, Fig. 2 (1995)).
Derivation (Clifford \& Bostock 2007): In honor of Fernando Omar Zuloaga (1951-) Argentinian botanist.

Classification. Subfamily Panicoideae. Tribe: Paspaleae. Subtribe Paspalinae.
Habit, Vegetative Morphology. Perennial, caespitose. Butt sheaths purple. Culms $65-90 \mathrm{~cm}$ long. Culm-internodes distally glabrous. Culm-nodes glabrous. Lateral branches lacking or sparse. Leaves mostly basal. Leaf-sheaths striately veined, glabrous on surface, outer margin hairy. Leaf-sheath oral hairs lacking or ciliate. Leaf-sheath auricles erect, $5-13 \mathrm{~mm}$ long. Ligule an eciliate membrane, $4-11 \mathrm{~mm}$ long. Leafblades linear or lanceolate, $5-17 \mathrm{~cm}$ long, $6-12 \mathrm{~mm}$ wide, glaucous. Leaf-blade surface glabrous or pubescent, sparsely hairy, hairy adaxially. Leaf-blade margins tuberculate-ciliate. Leaf-blade apex acuminate.

Inflorescence. Inflorescence composed of racemes. Racemes 12-27, borne along a central axis, unilateral, 2-12 cm long. Central inflorescence axis $6.5-14 \mathrm{~cm}$ long, glabrous. Rhachis angular, 0.2 mm wide, glabrous on margins. Spikelet packing 4 -rowed. Spikelets in pairs. Fertile spikelets pedicelled. Pedicels present, unequal, $0.3-1 \mathrm{~mm}$ long, smooth, tip discoid.

Fertile Spikelets. Spikelets comprising 1 basal sterile florets, 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets two-flowered - the lower floret male or barren, the upper fertile. Spikelets elliptic, dorsally compressed, plano-convex, obtuse, $2-2.5 \mathrm{~mm}$ long, $0.8-1 \mathrm{~mm}$ wide, falling entire.

Glumes. Glumes one the lower absent or obscure, shorter than spikelet or reaching apex of florets, thinner than fertile lemma. Upper glume ovate, 0.66-1 length of spikelet, membranous, without keels, 3 veined. Upper glume surface glabrous or puberulous.

Florets. Basal sterile florets 1, barren, without significant palea. Lemma of lower sterile floret elliptic, 1 length of spikelet, membranous, 3 -veined, glabrous or puberulous. Fertile lemma elliptic, 2-2.5 mm long, indurate, pallid, without keel, 5 -veined, more than 3 -veined. Lemma surface striate. Lemma margins involute. Palea involute, indurate.

Flower and Fruit. Anthers 3, 1-1.5 mm long, purple. Caryopsis with adherent pericarp.
Distribution (TDWG). Continent. South America.
Country /Province /State. Brazil. Brazil Southeast.
Minas Gerais.

Patis coreana (Honda)Ohwi. Acta.Phytotax. Geobot. 11 (3): 181 (1942).
Accepted by: W.D.Clayton \& K.Harman, GrassBase (2008) and online, U.Quattrocchi, CRC World Dictionary of Grasses (2006), S-L Chen et al, Flora of China 22 (Poaceae) (2006) (as Stipa), T.Koyama, Grasses of Japan and its neighboring regions (1987) (as Orthoraphium coreanum).

TYPE from Korea. Basionym or Replaced Name: Stipa coreana Honda, Koryo-shikenrin-no-ippan, 80 (1932). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: Korea: in silvis Koryo ---, Sept. ---, T. Nakai 13211 (HT: ?).

Recent Synonyms: Orthoraphium coreanum (Honda) Ohwi, Bull. Nat. Sci. Mus. Tokyo 33: 66 (1953). Stipa grandifolia Keng, Sinensia, 4: 322 (1934).

Achnatherum coreanum C, J. Jap. Bot. 17: 404 (1941).
Illustrations (Books): T.Koyama, Grasses of Japan and its neighbouring regions (1987) (210, Fig. 75 as Orthoraphium), S-L Chen et al, Flora of China, Illustrations, Poaceae (2007) (Fig. 285 as Stipa).

Derivation (Clifford \& Bostock 2007): L. -ana, indicating location. From Korea.
Classification. Subfamily Pooideae. Tribe: Stipeae.
Habit, Vegetative Morphology. Perennial, culms solitary. Rhizomes short. Culms erect, 70-100 cm long, 2-3 mm diam., 7-8 -noded. Leaf-sheaths puberulous. Ligule an eciliate membrane, $0.7-0.8 \mathrm{~mm}$ long, erose, truncate. Leaf-blades linear or lanceolate, $10-30 \mathrm{~cm}$ long, $10-20 \mathrm{~mm}$ wide. Leaf-blade surface scabrous, rough on both sides.

Inflorescence. Inflorescence a panicle. Panicle contracted, linear, $18-35 \mathrm{~cm}$ long, $2-3 \mathrm{~cm}$ wide. Primary panicle branches appressed, 1-2 -nate, $4-8 \mathrm{~cm}$ long, bearing $2-4$ fertile spikelets on each lower branch. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present, $1-5 \mathrm{~mm}$ long.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets lanceolate, dorsally compressed, compressed slightly, 13-16 mm long, breaking up at maturity, disarticulating below each fertile floret. Floret callus evident, pubescent, obtuse.

Glumes. Glumes persistent, similar, exceeding apex of florets, thinner than fertile lemma. Lower glume lanceolate, 1 length of upper glume, herbaceous, without keels, 7-9 -veined. Lower glume lateral veins with cross-veins. Lower glume apex acute. Upper glume lanceolate, $13-15 \mathrm{~mm}$ long, herbaceous, without keels, 7-9 -veined. Upper glume lateral veins with cross-veins. Upper glume apex acute.

Florets. Fertile lemma lanceolate, subterete, $10-13 \mathrm{~mm}$ long, coriaceous, mid-green or light brown, without keel, 5 -veined, more than 3-veined. Lemma surface pubescent. Lemma margins convolute, covering most of palea. Lemma apex dentate, 2 -fid, awned, 1 -awned. Principal lemma awn from a sinus, straight, $22-35 \mathrm{~mm}$ long overall, without a column. Palea 0.9 length of lemma, 2 -veined, without keels. Palea surface pubescent, hairy on back.

Flower and Fruit. Anthers 3, 7 mm long. Stigmas 2. Ovary glabrous. Caryopsis with adherent pericarp. Hilum linear.

Distribution (TDWG). Continent. Temperate Asia.
Country /Province /State. China, Eastern Asia. China South Central, China North-Central, China Southeast. Japan Hokkaido, or Honshu, or Shikoku, or Kyushu. Japan, Korea.

Hebei, Shaanxi. Anhui, Jiangsu, Jiangxi, Zhejiang. Hubei.

Illustrations (Journals): Hooker's Icones Plantarum (t. 2393 (1895)).
Derivation (Clifford \& Bostock 2007): L. blunt. Ligules truncate.
Classification. Subfamily Pooideae. Tribe: Stipeae.
Habit, Vegetative Morphology. Perennial, caespitose, clumped loosely. Rhizomes short, knotty. Culms $75-110 \mathrm{~cm}$ long, $1.8-3.5 \mathrm{~mm}$ diam., 2-3 -noded. Leaves basal and cauline. Leaf-sheaths glabrous on surface. Ligule an eciliate membrane, $1-2 \mathrm{~mm}$ long, truncate. Leaf-blades flat or involute, $8-25 \mathrm{~cm}$ long, $5-8 \mathrm{~mm}$ wide, stiff. Leaf-blade surface glabrous or pilose, sparsely hairy, hairy adaxially. Leaf-blade apex attenuate.

Inflorescence. Inflorescence a panicle. Peduncle antrorsely scabrous above. Panicle open, linear, 1325 cm long, $2-3 \mathrm{~cm}$ wide. Primary panicle branches appressed, $2-$ nate, $1-5 \mathrm{~cm}$ long, bearing 2-7 fertile spikelets on each lower branch. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets elliptic, dorsally compressed, $4.2-5.5 \mathrm{~mm}$ long, breaking up at maturity, disarticulating below each fertile floret.

Glumes. Glumes persistent, similar, shorter than spikelet, thinner than fertile lemma. Lower glume elliptic, $4-5 \mathrm{~mm}$ long, 1 length of upper glume, membranous, pallid, without keels, $5-7$-veined. Lower glume apex obtuse. Upper glume elliptic, 4-5 mm long, 0.9 length of adjacent fertile lemma, membranous, pallid, without keels, 5-7 -veined. Upper glume apex obtuse.

Florets. Fertile lemma elliptic, dorsally compressed, $4.5-5.5 \mathrm{~mm}$ long, indurate, light brown, shiny, without keel, 5 -veined, more than 3 -veined. Lemma margins convolute, covering most of palea. Lemma apex acute, awned, 1 -awned. Principal lemma awn $10-15 \mathrm{~mm}$ long overall, deciduous. Palea 1 length of lemma, indurate, 2 -veined, without keels.

Flower and Fruit. Caryopsis with adherent pericarp, ellipsoid, 2.5-3 mm long.
Distribution (TDWG). Continent. Temperate Asia.
Country /Province/State. China, Eastern Asia. China South Central, China Southeast. Nansei-Shoto, Taiwan.

Shaanxi. Guangdong, Henan, Hunan, Zhejiang. Guizhou, Hubei, Sichuan, Yunnan.

Patis racemosa (Sm.) Romasch., P.M.Peterson \& Soreng. Taxon 60 (6): 1714 (2011).
Accepted by: R.J.Soreng et al., Catalogue of New World Grasses (2000-2003) and online, W.D.Clayton \& K.Harman, GrassBase (2008) and online (as Oryzopsis), U.Quattrocchi, CRC World Dictionary of Grasses (2006).

TYPE from USA. Basionym or Replaced Name: Milium racemosum Sm., Cycl. 15 (1813). T:<Type of Basionym>: fide TROPICOS and Kew Synonomy Database: T: Muhlenberg 30, 1793, USA: Pennsylvania: Lancaster (K; US (K illustr.)).

Recent Synonyms: Oryzopsis racemosa (Smith) Ricker ex Hitchcock, Rhodora, viii. 210 (1906). Piptatherum racemosum (Sm.) Barkworth, Phytologia 74(1): 19 (1993).

Illustrations (Books): M.E.Barkworth et al, Flora of North America north of Mexico Vol 24 Poaceae, part 1 (2007) (150).

Derivation (Clifford \& Bostock 2007): L. racemus, stalk of a cluster of grapes; -osa, abundance. The spikelets are borne in racemes or contracted panicles.

Classification. Subfamily Pooideae. Tribe: Stipeae.
Habit, Vegetative Morphology. Perennial, caespitose. Rhizomes short, knotty. Culms erect, 30-90 cm long. Leaves cauline. Leaf-sheaths antrorsely scabrous. Ligule a ciliolate membrane, 0.5 mm long. Leafblades $15-30 \mathrm{~cm}$ long, $8-15 \mathrm{~mm}$ wide. Leaf-blade surface scaberulous, rough abaxially, pubescent, hairy adaxially. Leaf-blade margins scabrous. Leaf-blade apex acuminate.

Inflorescence. Inflorescence a panicle. Panicle open, elliptic, 5-30 cm long. Primary panicle branches ascending or spreading, $5-11 \mathrm{~cm}$ long. Spikelets solitary. Fertile spikelets pedicelled. Pedicels present.

Fertile Spikelets. Spikelets comprising 1 fertile florets, without rhachilla extension. Spikelets of 1 fertile floret with or without additional sterile florets. Spikelets one-many-flowered - if two-flowered then both fertile or the upper sterile. Spikelets elliptic, dorsally compressed, $7-8 \mathrm{~mm}$ long, breaking up at maturity, disarticulating below each fertile floret. Floret callus pilose.

Glumes. Glumes persistent, similar, reaching apex of florets, thinner than fertile lemma. Lower glume oblong, $7-8 \mathrm{~mm}$ long, 1 length of upper glume, membranous, without keels, 7 -veined. Lower glume apex
acute or acuminate. Upper glume oblong, 7-8 mm long, 1 length of adjacent fertile lemma, membranous, without keels, 7 -veined. Upper glume apex acute or acuminate.

Florets. Fertile lemma oblong, dorsally compressed, $7-8 \mathrm{~mm}$ long, coriaceous, black, without keel. Lemma surface pubescent. Lemma margins convolute, covering most of palea. Lemma apex awned, 1 awned. Principal lemma awn 10-25 mm long overall, deciduous. Palea coriaceous, 2 -veined, without keels.

Flower and Fruit. Anthers 4 mm long.
